About This Guide

The Integrator's Reference Manual for Polycom® HDX® Systems is for system integrators who need to configure, customize, manage, and troubleshoot Polycom HDX systems. The API commands in this guide are applicable to the Polycom HDX 9000 series, Polycom HDX 8000 HD series, Polycom HDX 7000 HD series and Polycom HDX 6000 HD series systems.

Room Integration

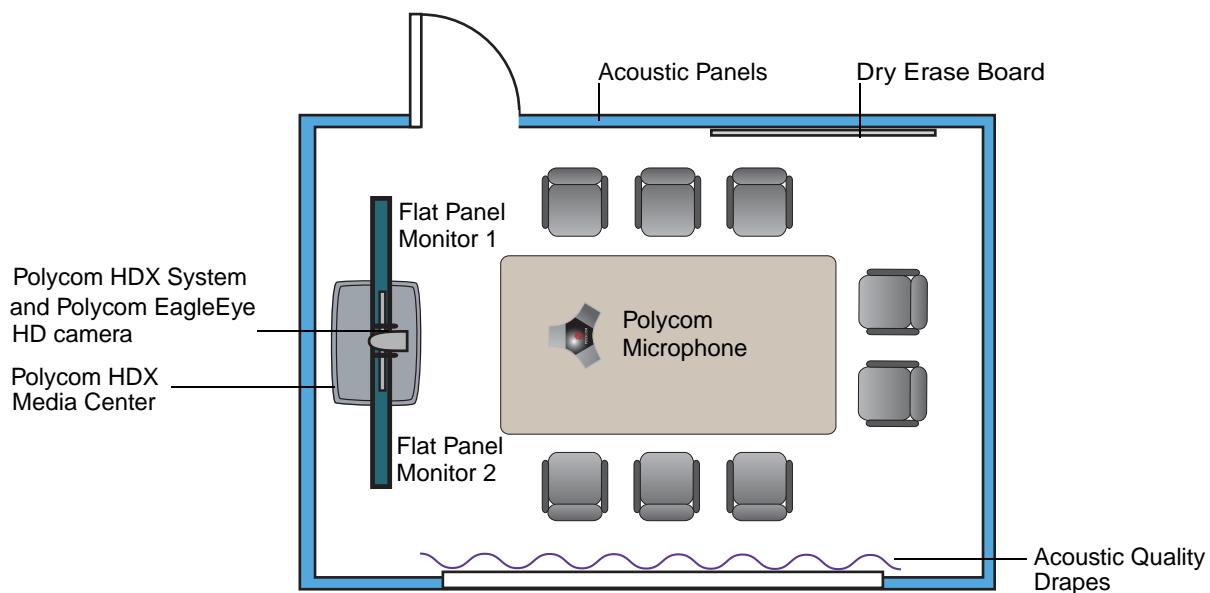

Setting Up a Room for Video Conferencing

For detailed information about setting up a room for video conferencing, refer to [Room Design and Layout](#) on page [A-1](#).

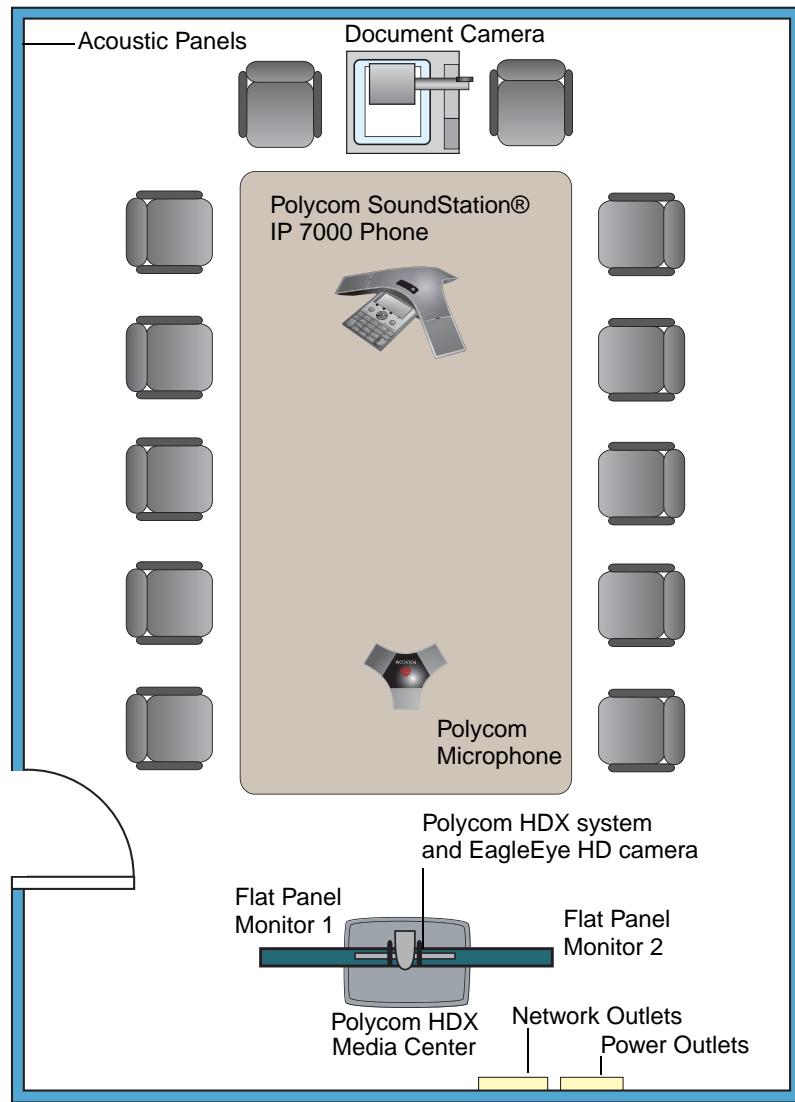

Room Layout Examples

Use the following diagrams as examples for setting up a conference room with Polycom HDX systems. Polycom recommends that you contract an experienced contractor to ensure all the components operate as a single cohesive system.

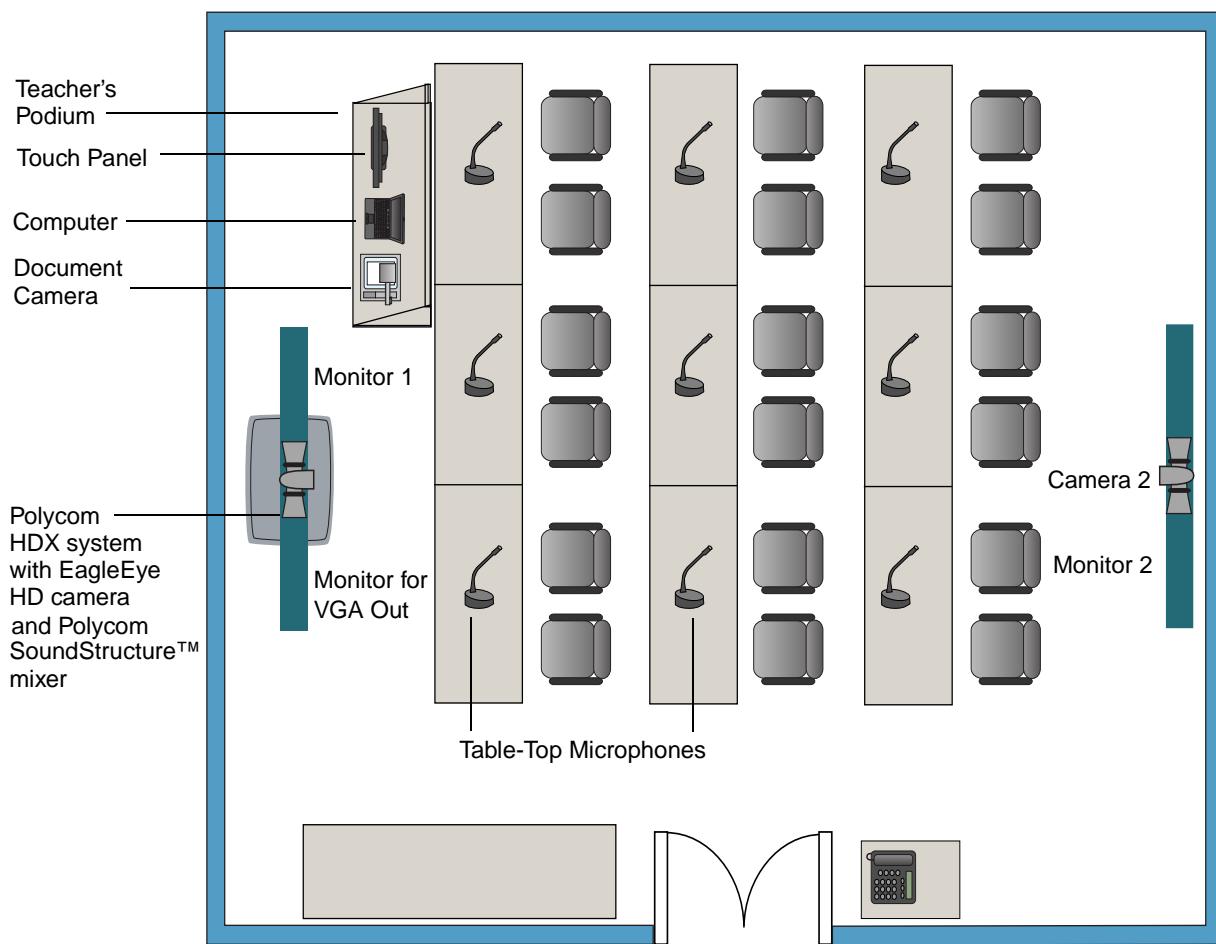

Small Conference Room

Large Conference Room

Classroom

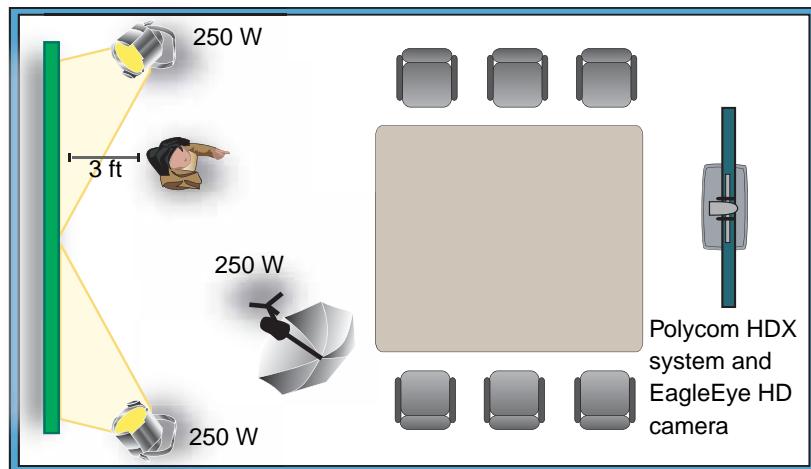

Setting Up the Room for Polycom People On Content™

For the best results, follow these guidelines for setting up Polycom People On Content™:

- Use the Polycom EagleEye HD camera with Polycom HDX 9000 series and Polycom HDX 8000 series systems. Polycom recommends using a Polycom EagleEye II, Polycom EagleEye III, Polycom EagleEye HD or Polycom EagleEye HD 1080 camera with People on Content. If you are using a Polycom EagleEye 1080 or Polycom EagleEye View camera, activating People on Content automatically reduces the resolution to 720p.
- Create a flat, consistent background color using a screen or matte-finish paint in green or blue. Make sure the background has no shadows or glare.

- Make sure that the background and the presenter are well lit. For example, use a minimum of two 250 W halogen lights on the background and one on the presenter.
- Experiment with different room and lighting arrangements until the best results are achieved.

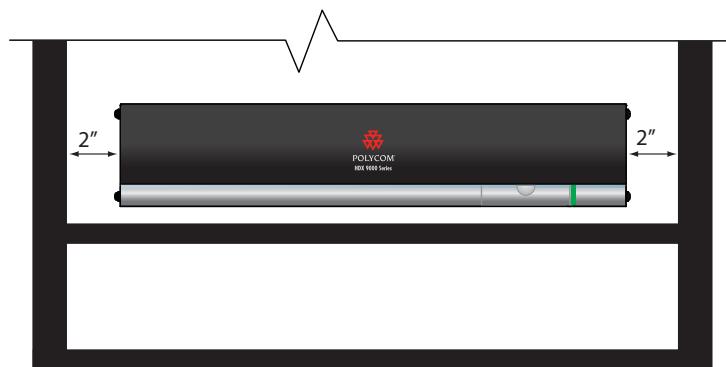

You can find more information about configuring and using People On Content in the *User's Guide for Polycom HDX Systems* and in the Knowledge Base on the Polycom web site.

Polycom HDX Installation Precautions

If you place the Polycom HDX series system in a cart or credenza, ensure that there is proper ventilation for maintaining an ambient temperature of 40°C or lower.

Polycom recommends ventilation gaps of at least 2 inches (50.80 mm) on the left and right of the system with appropriate access to fresh air.

Integrating Video

The following sections describe how to connect cameras to Polycom HDX systems. After you connect a camera to a Polycom HDX system, refer to the Administrator's Guide for Polycom HDX Systems for information about configuring the camera options in the user interface.

Connecting Polycom Cameras

You can connect Polycom HDX systems to a Polycom EagleEye 1080, Polycom EagleEye HD, Polycom EagleEye View, Polycom EagleEye II, Polycom EagleEye III, Polycom EagleEye Director, Polycom PowerCam™, or PowerCam Plus camera from Polycom, or to other supported cameras. Refer to the release notes for the software release installed on the Polycom HDX system for a list of supported PTZ cameras.

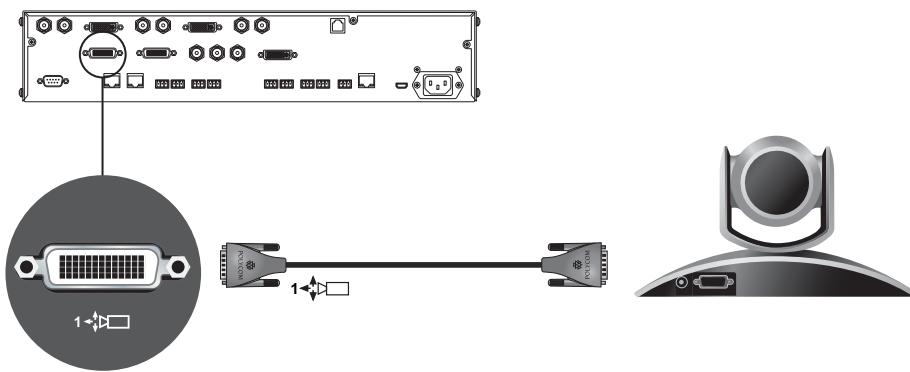

Points to Note about Polycom Cameras:

- The Polycom EagleEye HD connection diagrams can be applied to Polycom EagleEye II cameras on Polycom HDX 9006 systems only. The diagrams can also be applied to EagleEye III cameras on all Polycom HDX 9000 series systems.
- Polycom HDX 6000 series, Polycom HDX 7000 series, and Polycom HDX 8000 series systems *must* be connected to one of the Polycom EagleEye cameras to receive signals from the remote control. Point the remote control at the camera to control those Polycom HDX systems.

Polycom EagleEye HD Camera as the Main Camera up to 30 ft Away

You can connect a Polycom EagleEye HD camera (part number 8200-23600-001 8200-23610-001, 8200-08270-xxx, or 8200-08260-xxx) to a Polycom HDX 9000 Series system as the main camera using:

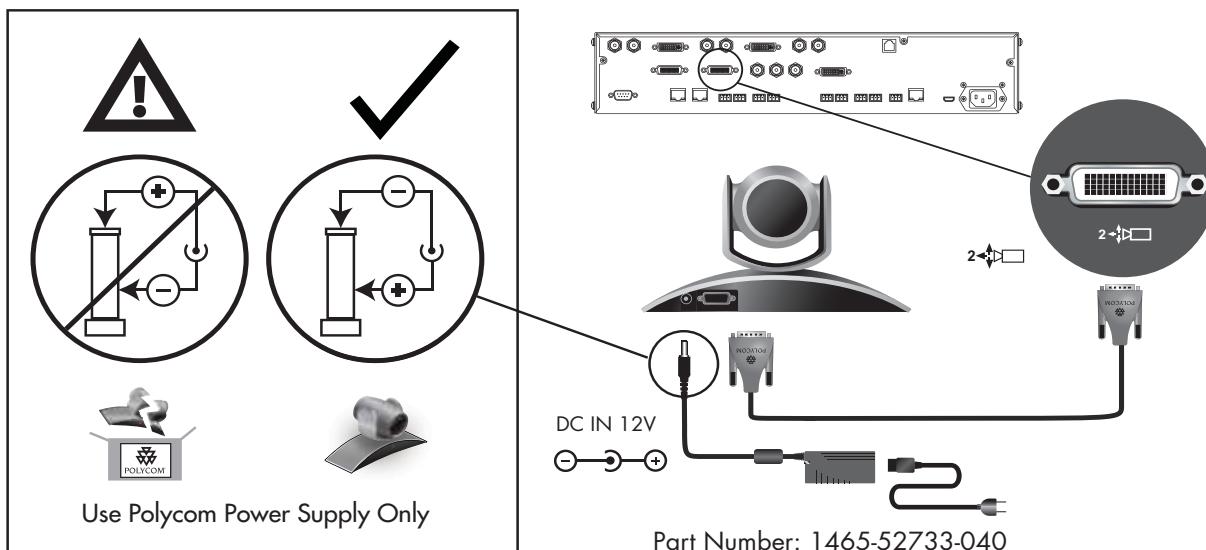

- [HDCI Analog Camera Cable](#) on page 2-27.

Polycom EagleEye HD Camera as the Second Camera up to 30 ft Away

You can connect a Polycom EagleEye HD camera (part number 8200-23600-001, 8200-23610-001, 8200-08270-xxx, or 8200-08260-xxx) to a Polycom HDX 9000 Series system as the second camera using:

- [HDCI Analog Camera Cable](#) on page 2-27.
- Power supply. Use only the approved power supply from Polycom (part number 1465-52748-040). Do not exceed 12 Volts at 3 Amps. Verify the polarity of the power supply as shown on the Polycom camera next to the power supply input.

Polycom EagleEye HD Camera as the Main or Second Camera up to 100 ft Away

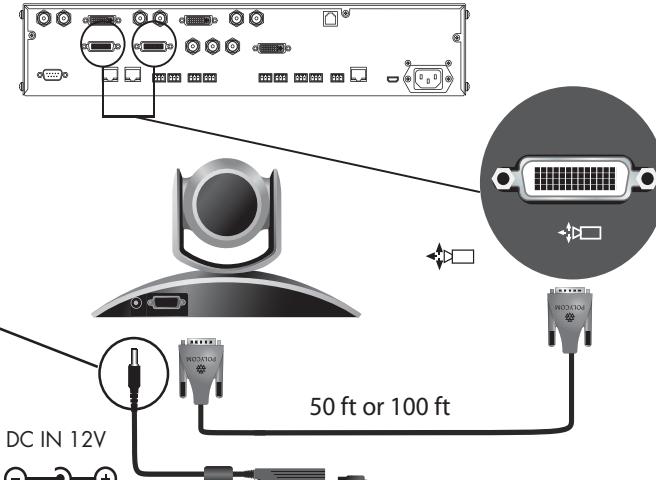

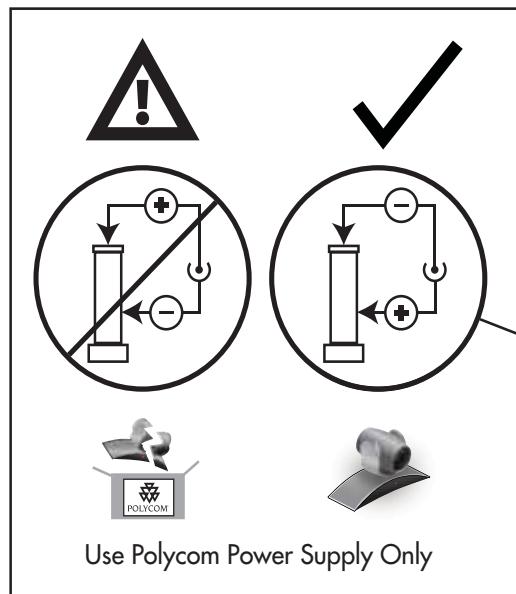

To connect a Polycom EagleEye HD camera (part number 8200-23600-001 8200-23610-001, 8200-08270-xxx, 8200-08260-xxx, or 7200-25689-xxx) to a Polycom HDX 9000 Series system more than 30 ft away:

Option 1

- [HDCI Analog Camera Cable](#) on page 2-27.
- Power supply. Use only the approved power supply from Polycom (part number 1465-52748-040). Do not exceed 12 Volts at 3 Amps. Verify the polarity of the power supply as shown on the Polycom camera next to the power supply input.

Polycom recommends this configuration when a custom cable length is not required.

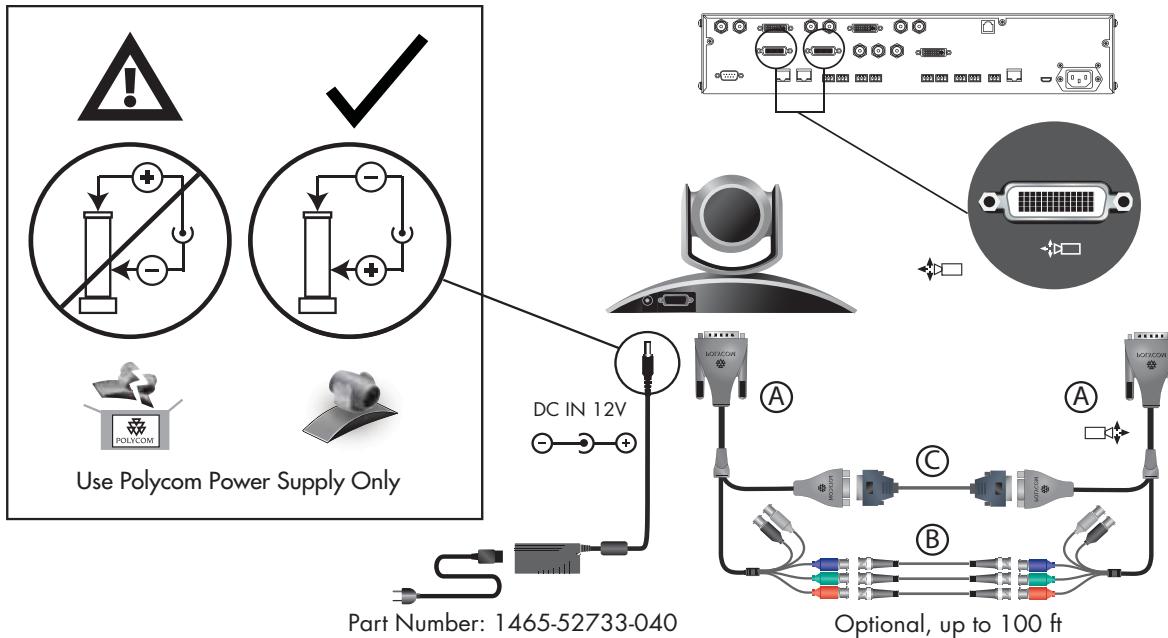

Part Number: 1465-52733-040

Option 2

- A—Two [HDCI Camera Break-Out Cable](#) on page 2-30.
- B—Coaxial analog video cables.
- C—DB-9 serial cable.
- Power supply. Use only the approved power supply from Polycom (part number 1465-52748-040). Do not exceed 12 Volts at 3 Amps. Verify the polarity of the power supply as shown on the Polycom camera next to the power supply input.

Polycom recommends this configuration when a custom cable length is required. The BNC and serial cables can be built to custom lengths.

Polycom EagleEye 1080 or Sony EVI-HD1 PTZ as the Main or Second Camera

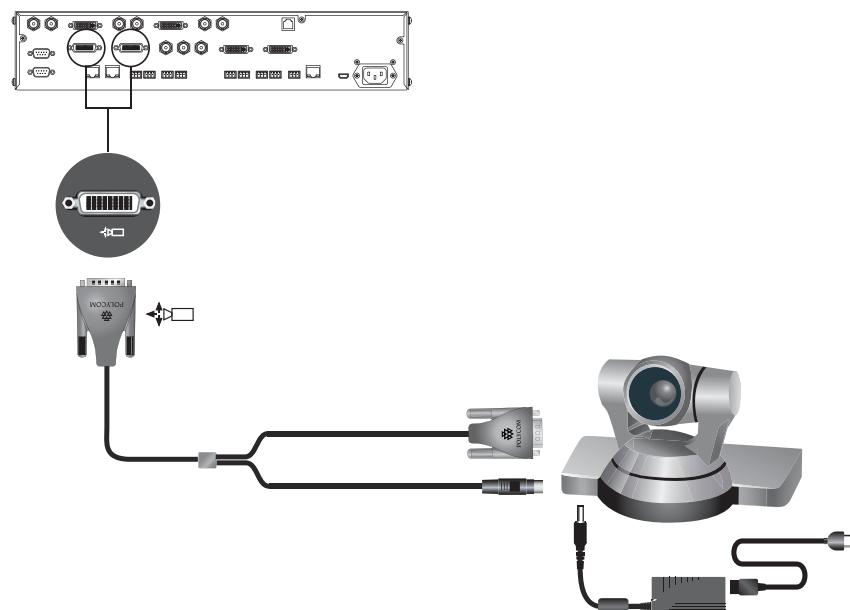

You can connect a Polycom EagleEye 1080 or Sony EVI-HD1 PTZ camera to a Polycom HDX 9000 Series system as the main or second camera using:

Option 1

- [HDCI Polycom EagleEye 1080 Camera Cable](#) on page 2-37 (this cable is compatible with the Sony EVI-HD1 PTZ camera).

Polycom recommends this configuration when a custom cable length is required.

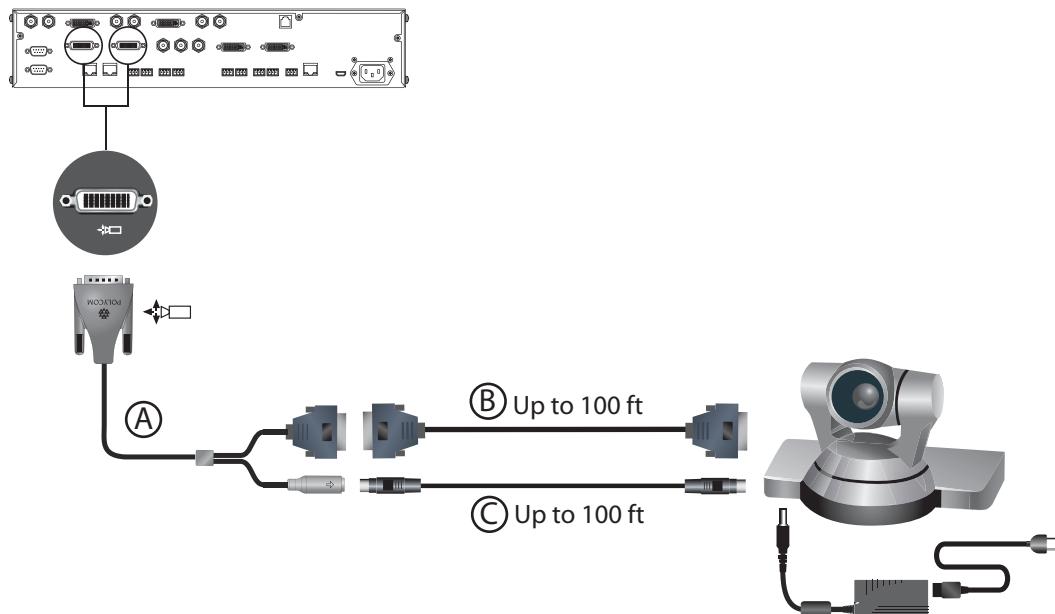

Option 2

- A—[HDCI Sony VISCA Adapter Cable](#) on page 2-39.
- B—VGA cable.
- C—VISCA cable.

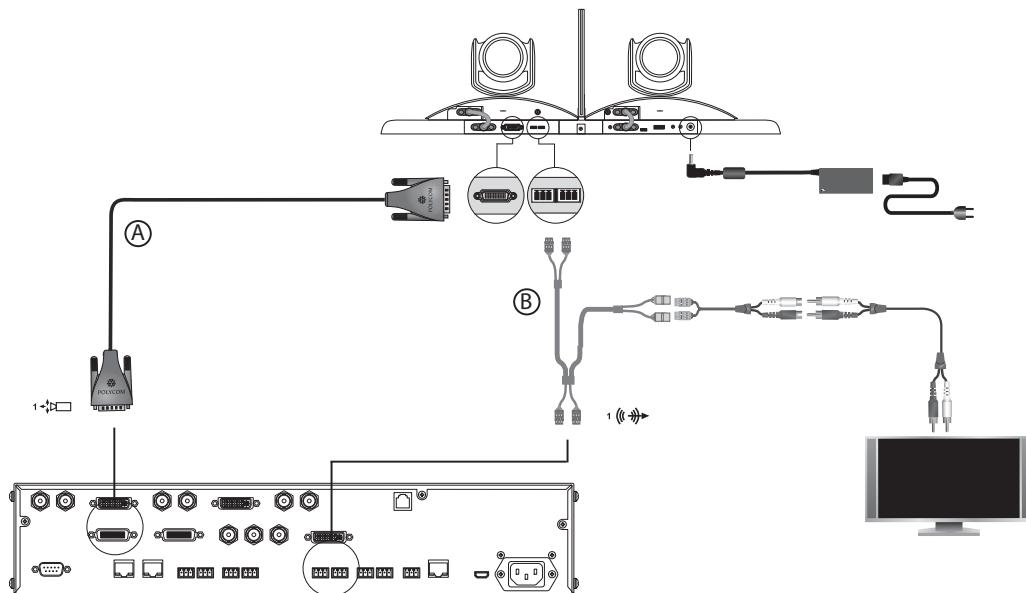

Polycom recommends this configuration when a custom cable length is required.

Polycom EagleEye Director as the Main Camera or Second Camera

You can connect a Polycom EagleEye Director (part number 7200-82632-xxx, 7200-82631-xxx, or 2200-82559-xxx) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the main camera using:

- A—[HDCI Analog Camera Cable](#) on page 2-27.
- B—[Polycom EagleEye Director Audio Feedback Phoenix to Phoenix Cable](#) on page 2-59.

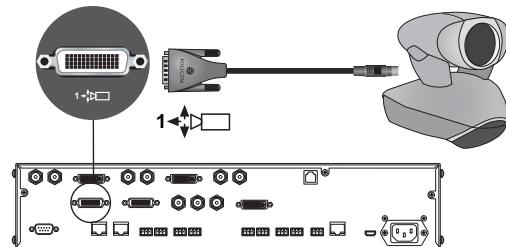

PowerCam as the Main Camera up to 10 ft Away

You can connect a PowerCam (part number 2215-50370-001) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the main camera up to 10 ft away using:

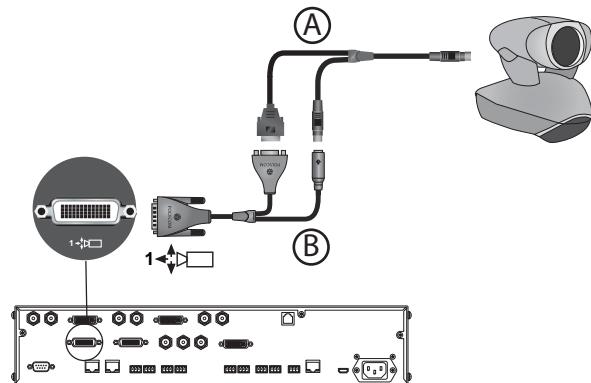

Option 1

- [HDCI PowerCam Cable](#) on page 2-34.

Option 2

- A—[PowerCam Primary Camera Cable](#) on page 2-41.
- B—[HDCI PowerCam Plus Adapter Cable](#) on page 2-35.

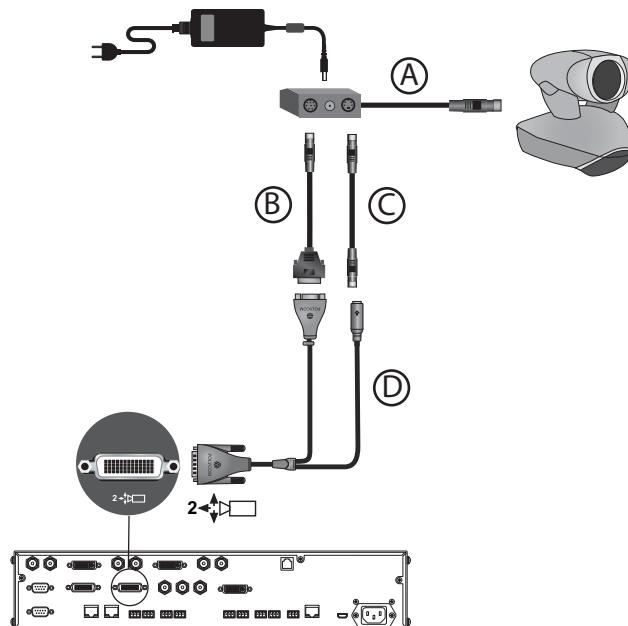

PowerCam as the Second Camera

The following kits are available, which include the power supply, PowerCam Break-Out cable, 8-pin mini-DIN to DB-9 cable, and S-Video cable:

- 7230-22231-001 (50 ft)
- 7230-22232-001 (100 ft)

You can connect a PowerCam (part number 2215-50370-001) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the second camera using:

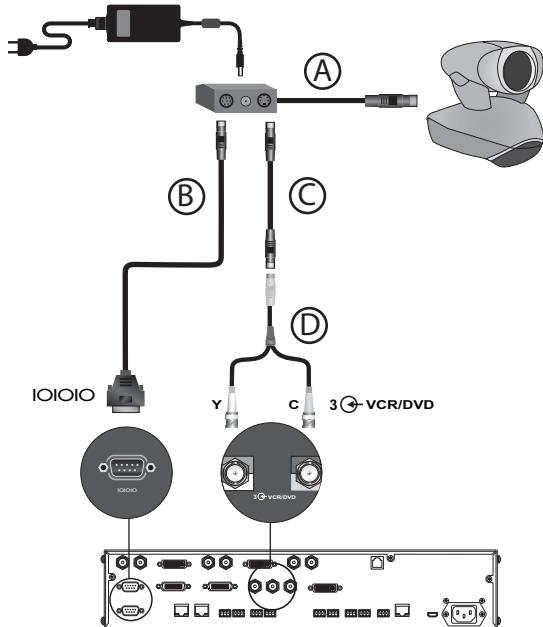

- A— [PowerCam Break-Out Cable](#) on page 2-42.
- B— [8-pin mini-DIN to DB-9](#) on page 2-44.
- C— [S-Video Cable](#) on page 2-16.
- D— [HDCI PowerCam Plus Adapter Cable](#) on page 2-35.
- Power Supply (part number 1465-52748-040).

You can connect a PowerCam (part number 2215-50370-001) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the third camera using:

- A— [PowerCam Break-Out Cable](#) on page 2-42.
- B— [8-pin mini-DIN to DB-9](#) on page 2-44.
- C— [S-Video Cable](#) on page 2-16.

- D—[BNC to S-Video Cable](#) on page 2-17.
- Power Supply (part number 1465-52748-040).

If you connect a PTZ camera to a serial port, set **RS-232 Mode** to **Camera PTZ** on the Serial Ports screen.

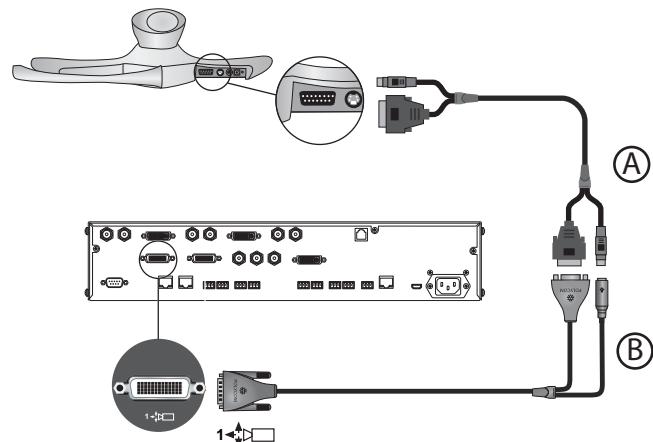

PowerCam Plus as the Main Camera up to 10 ft Away

You can connect a PowerCam Plus (part number 2215-50200-001) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the main camera up to 10 ft away using:

- A— [PowerCam Plus Primary Cable](#) on page 2-33.
- B— [HDCI PowerCam Plus Adapter Cable](#) on page 2-35.

Automatic camera tracking is not available when using the PowerCam Plus camera with a Polycom HDX system.

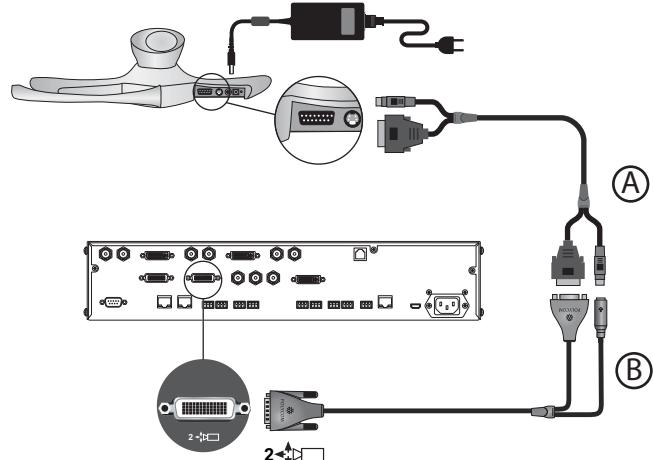

PowerCam Plus as the Second Camera up to 10 ft Away

You can connect a PowerCam Plus (part number 2215-50200-001) to a Polycom HDX 9001, Polycom HDX 9002, or Polycom HDX 9004 system as the second camera up to 10 ft away using:

- A— [PowerCam Plus Primary Cable](#) on page 2-33.
- B— [HDCI PowerCam Plus Adapter Cable](#) on page 2-35.
- Power Supply (part number 1465-52748-040).

Automatic camera tracking is not available when using the PowerCam Plus camera with a Polycom HDX system.

Connecting Sony and ELMO Cameras

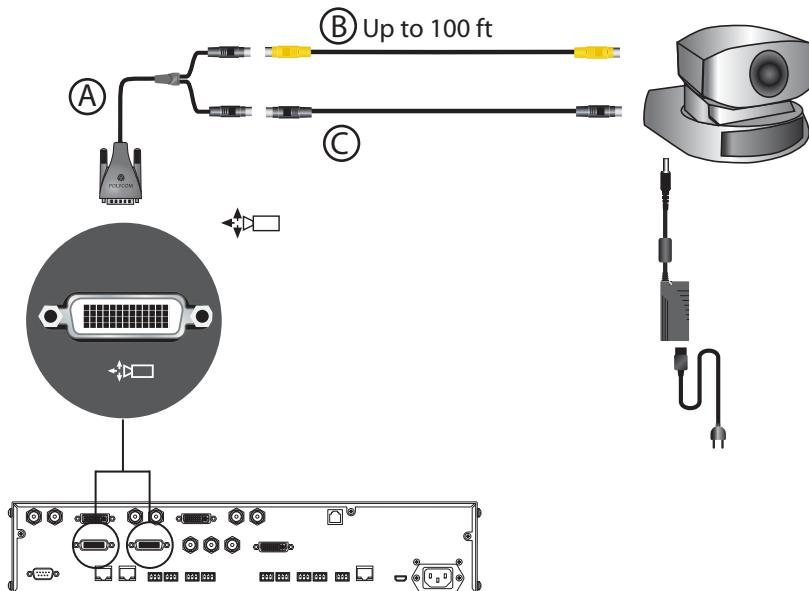

Refer to the release notes for a list of supported Pan/Tilt/Zoom (PTZ) cameras.

Sony or ELMO PTZ as the Main or Second Camera

To connect a Sony or ELMO PTZ camera to a Polycom HDX 9000 Series system as the main or second camera:

You can connect a Sony or ELMO PTZ camera to a Polycom HDX system using:

- A—[HDCI Sony VISCA Adapter Cable](#) on page 2-39.
- B—[S-Video Cable](#) on page 2-16.
- C—Sony VISCA cable.

Sony BRC-H700 PTZ

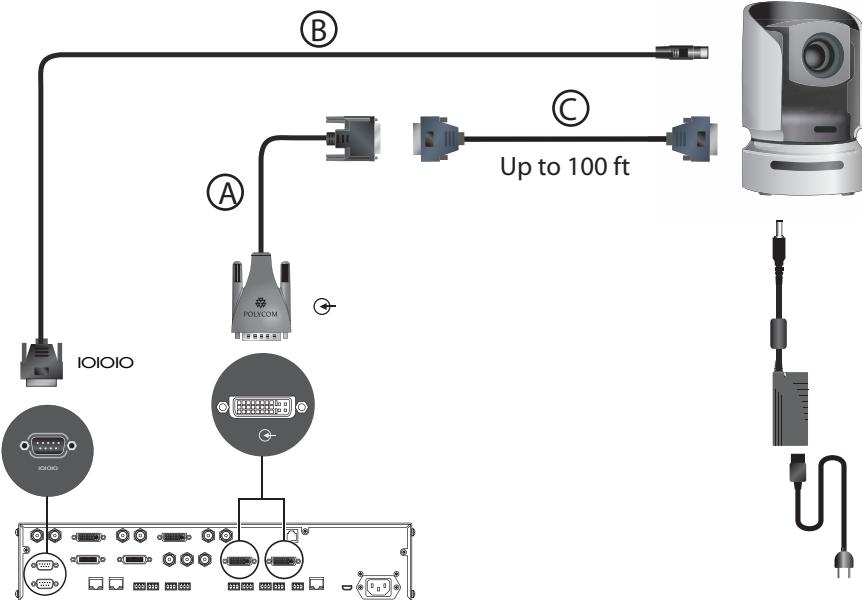

To connect a Sony BRC-H700 PTZ camera to a Polycom HDX 9000 Series system:

You can connect a Sony BRC-H700 PTZ camera to a Polycom HDX system using:

- A—[DVI to VGA Monitor Cable](#) on page [2-20](#).
- B—[8-pin mini-DIN to DB-9](#) on page [2-44](#).
- C—VGA extension cable.

To provide XGA output (1024x768), you must install the optional Sony HFBK-XG1 card into the slot on the back of the Sony BRC-H700 PTZ camera.

Another option is to use a VGA cable for cable C and to use a VGA/DVI-A adapter (part number 1517-52689-001) for cable A. The VGA/DVI-A adapter is a solid overmolded adapter that connects to the Polycom HDX 9000 Series system side of cable C and adapts from cable C's VGA connector to a DVI-A connector to plug into the Polycom HDX 9000 Series system.

Connecting Vaddio and Canon Cameras

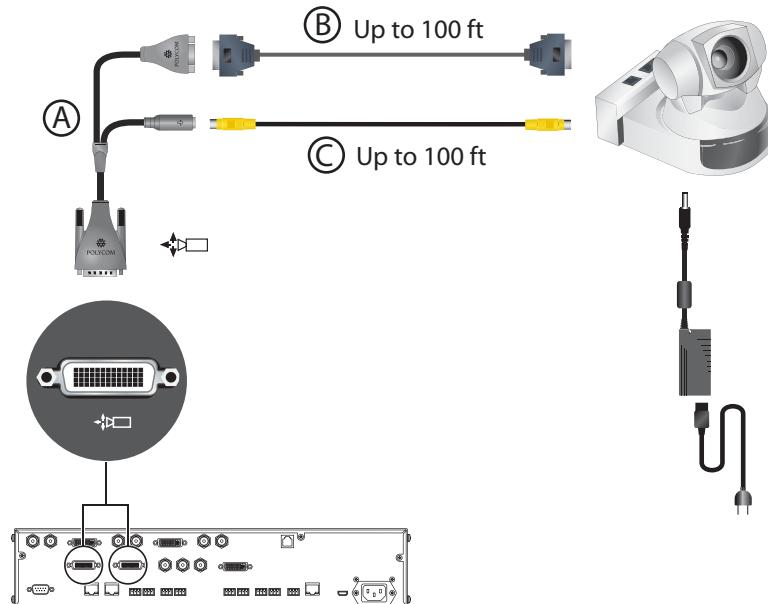

Refer to the release notes for a list of supported Pan/Tilt/Zoom (PTZ) cameras.

Vaddio or Canon PTZ as the Main or Second Camera

To connect a Vaddio or Canon PTZ camera to a Polycom HDX 9000 Series system as the main or second camera:

You can connect a Vaddio 70, Vaddio 100, or Canon (with VISCA cable shoe) PTZ camera to a Polycom HDX system using:

- A—[HDCI VISCA Adapter Cable](#) on page [2-36](#).
- B—DB-9 serial cable.
- C—[S-Video Cable](#) on page [2-16](#).

A separate power supply is required regardless of which connector is used on the HDX 9000 Series back panel.

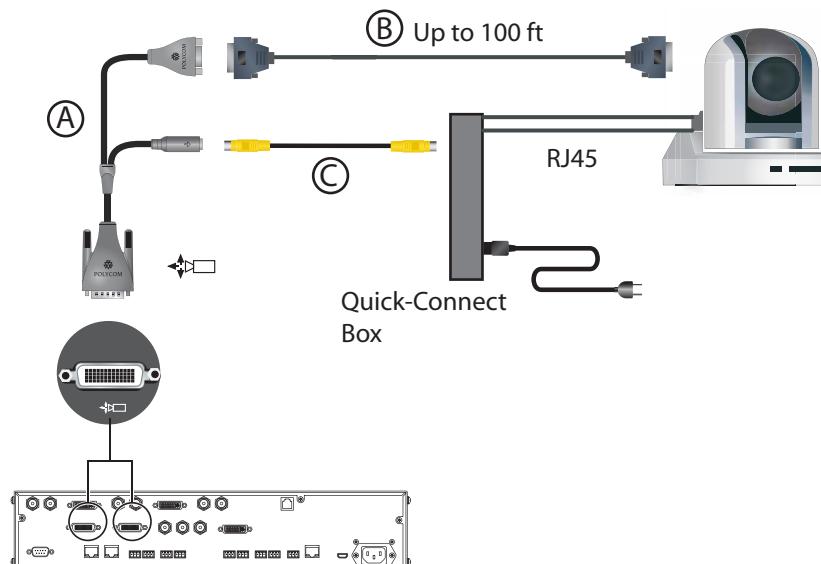

Vaddio 300 PTZ as the Main or Second Camera

To connect a Vaddio 300 PTZ camera to a Polycom HDX 9000 Series system as the main or second camera:

You can connect a Vaddio 300 PTZ camera to a Polycom HDX system using:

- A—[HDCI VISCA Adapter Cable](#) on page 2-36.
- B—DB-9 serial cable.
- C—[S-Video Cable](#) on page 2-16.

Note: For situations that require extraordinary cable lengths, CAT5 extension kits for camera video, power, and control are available from third-party vendors.

Integrating Audio and Content

Connecting a Computer to a Polycom HDX 9000 Series System

You can connect Polycom HDX 9000 series systems to a computer.

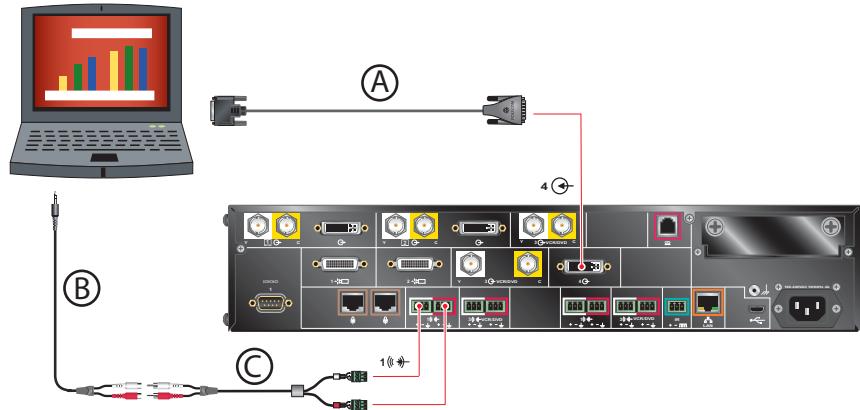

To connect a computer to a Polycom HDX 9001 or Polycom HDX 9002 system:

Option 1

Connect a Polycom HDX 9001 or Polycom HDX 9002 system to a computer using

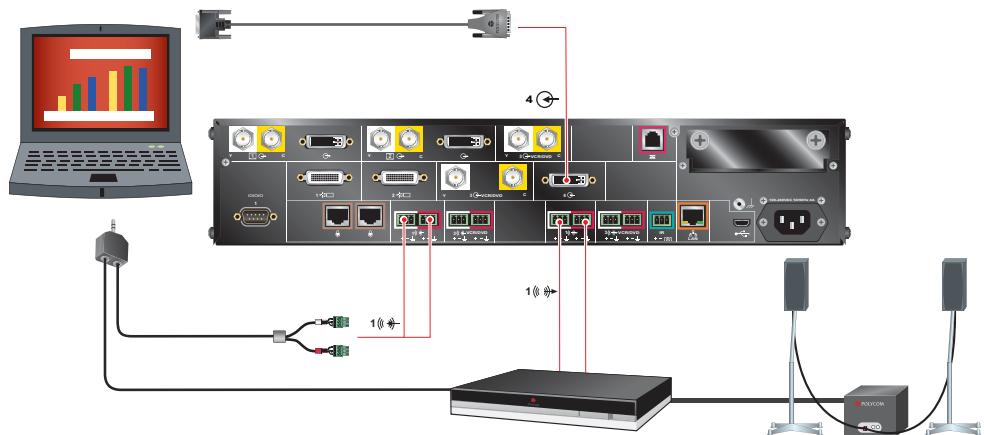

- A—[DVI to VGA Monitor Cable](#) on page 2-20.
- B—3.5 mm stereo to RCA adapter cable.
- C—[Audio Adapter Cable](#) on page 2-54.

When you connect a computer to a Polycom HDX 9001 or Polycom HDX 9002 as follows, audio is only heard at the far site and may be heard even when video input 4 is not selected.

Option 2

To hear audio at both the near site and the far site, use a bypass mixer to connect a computer to the Polycom HDX 9001 or Polycom HDX 9002 system as the following figure shows.

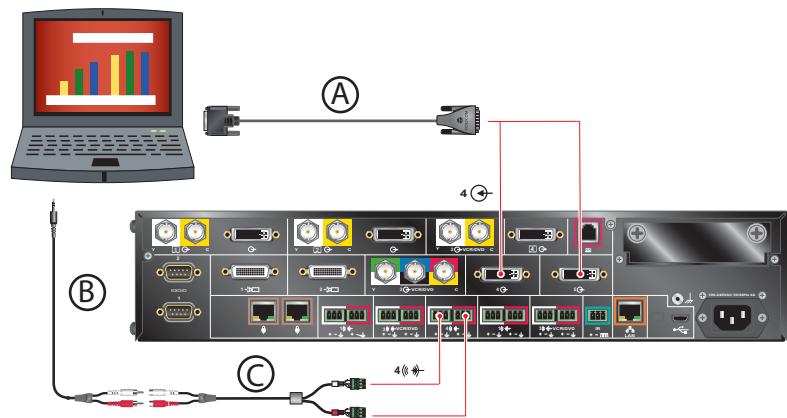

To connect a computer to a Polycom HDX 9004 system:

Connect a Polycom HDX 9004 system to a computer using

- A—[DVI to VGA Monitor Cable](#) on page 2-20.
- B—3.5 mm stereo to RCA adapter cable.
- C—[Audio Adapter Cable](#) on page 2-54 (Polycom HDX 9004, Polycom HDX 9002, and Polycom HDX 9001 systems only).

When you connect a computer to video input 4 and audio input 4 on a Polycom HDX 9004 as follows, audio from input 4 is muted unless video input 4 is selected as a video source.

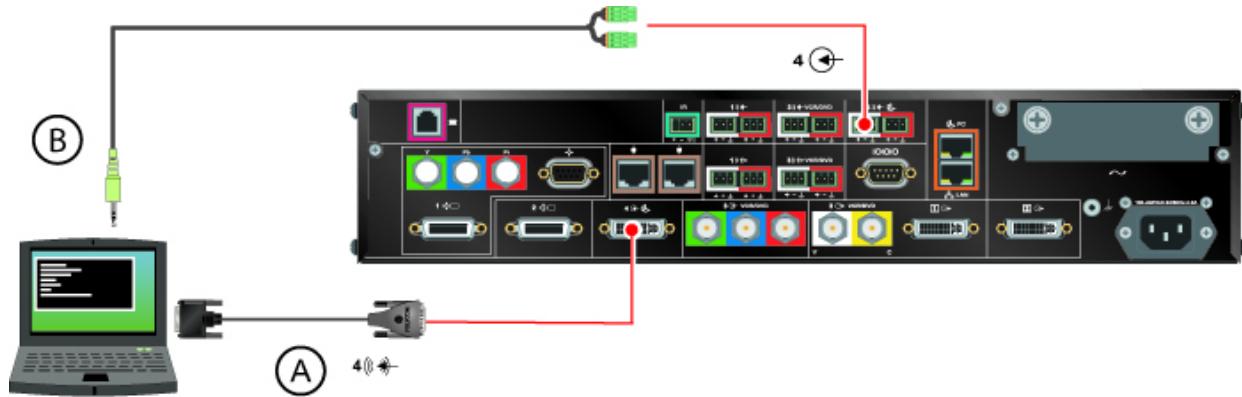

To connect a computer to a Polycom HDX 9006 system:

Connect a Polycom HDX 9006 system to a computer using:

- A—[DVI to VGA Monitor Cable](#) on page 2-20.
- B—3.5 mm stereo to dual 3-pin Phoenix connectors cable.

When you connect a computer to video input 4 and audio input 4 on a Polycom HDX 9006 system as follows, audio from input 4 is muted unless video input 4 is selected as a video source.

Connecting a Vortex® Mixer to a Polycom HDX 9000 Series System

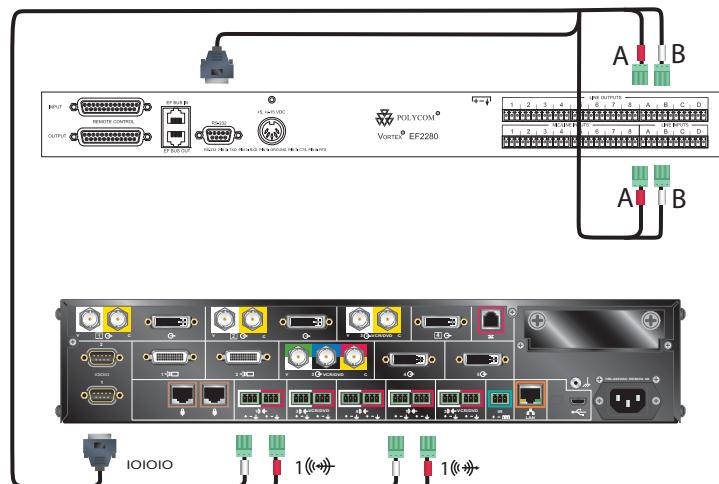

Polycom strongly recommends using Polycom InstantDesigner™ to get started with your Vortex® mixer integration. InstantDesigner resolves many common issues with connections and configuration settings.

To use a Polycom HDX system with audio input from a Vortex mixer, set the Input Type to Line Input and disable Echo Canceller.

Connect a Polycom HDX system to the Vortex mixer using:

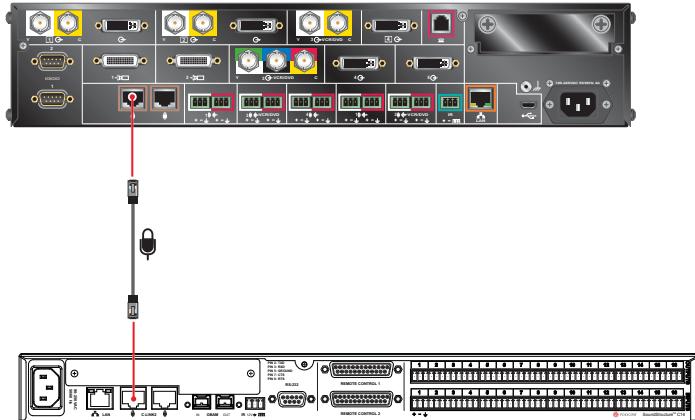

- Vortex cable shown on page [Vortex Cable](#) on page [2-56](#).

Connecting a Polycom SoundStructure C-Series Mixer to a Polycom HDX 9000 Series System

Connect a Polycom HDX system to the Polycom SoundStructure C-Series mixer using:

- [Polycom HDX Microphone Host Cable](#) on page 2-46.

Points to Note:

- The microphone input of the Polycom HDX 9000 Series system can support one SoundStructure C-Series mixer that has up to four Polycom HDX microphones connected to it. For more information about using the SoundStructure C-Series mixer with a Polycom HDX system, refer to the SoundStructure C-Series documentation on the Polycom web site.

You cannot connect both a SoundStructure C-Series mixer and a SoundStation IP 7000 phone to the Polycom HDX 9000 Series system at the same time.

- If the EagleEye Director camera is connected to a Polycom HDX system that is connected to a SoundStructure C-Series mixer (or echo cancellers, sound mixers, or other external devices) and the SoundStructure C-Series mixer is connected to the room audio playback system, the EagleEye Director's audio feedback cable ([Polycom EagleEye Director Audio Feedback Phoenix to Phoenix Cable](#) on page 2-59) must connect to the balanced audio output connector of SoundStructure. The room audio playback system must connect through the EagleEye Director's audio feedback cable to the SoundStructure C-Series mixer.

Cables

This chapter includes information about cables that can be used with a Polycom HDX system. Please note that drawings and part numbers are provided for reference only. Compliance information is provided for the Restriction of certain Hazardous Substances Directive (RoHS).

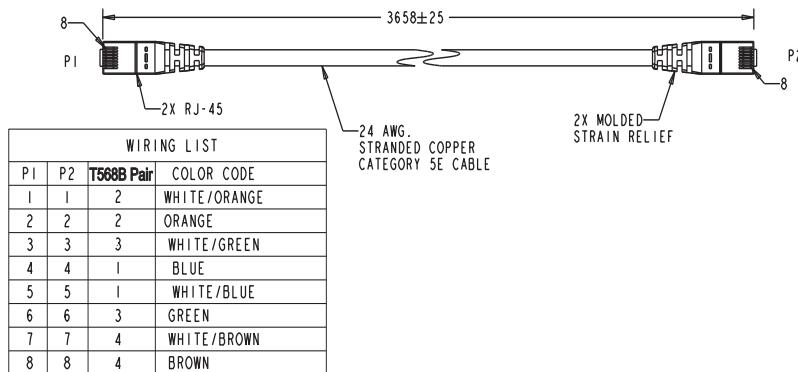

Network Cables

CAT 5e LAN Cable

This cable connects a Polycom HDX system to the LAN. It has orange RJ-45 connectors on both ends. It meets category 5e requirements and is wired according to EIA/TIA-568B. The maximum approved length for this cable is 100 ft (30 m) on an 802 network.

Length	Part Number	RoHS Compliant
12 ft (3.6 m)	2457-23537-001	Yes

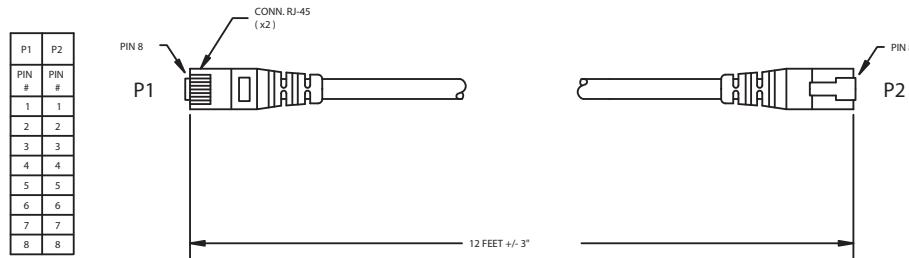

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

LAN Cable

This cable connects a Polycom HDX system to the LAN. It has orange RJ-45 connectors on both ends and is used with all systems. The maximum approved length for this cable is 100 ft (30 m).

Length	Part Number	RoHS Compliant
12 ft (3.6 m)	2457-08343-001	Yes

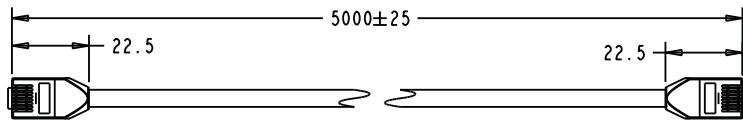

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Polycom Touch Control LAN Cable

This cable connects a Polycom Touch Control device to the LAN.

Length	Part Number	RoHS Compliant
25 ft (7.62 m)	2457-26994-001	Yes

WIRING LIST		
P1	P2	COLOR CODE
1	1	WHITE/ORANGE
2	2	ORANGE/WHITE
3	3	WHITE/GREEN
4	4	BLUE/WHITE
5	5	WHITE/BLUE
6	6	GREEN/WHITE
7	7	WHITE/BROWN
8	8	BROWN/WHITE

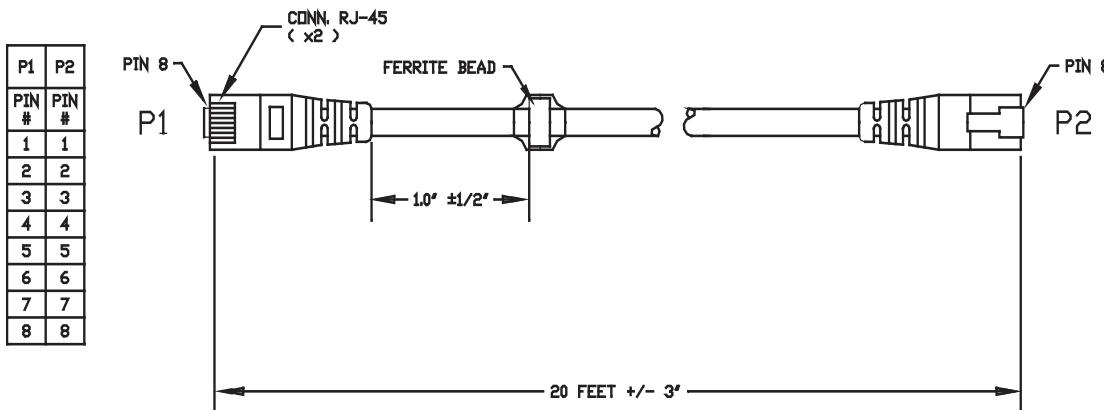

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

ISDN Cable

This cable connects a Polycom HDX system to a BRI or PRI line. It has clear RJ-45 connectors on both ends and is used with all Polycom HDX systems that have ISDN capability. The maximum approved length for this cable is 50 ft (15 m).

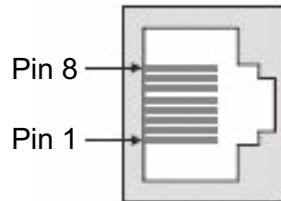

Length	Part Number	RoHS Compliant
20 ft (6.6 m)	2457-08548-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

PRI Pin Assignments

The following illustration and table show the pin assignments for the PRI port on the Polycom HDX system.

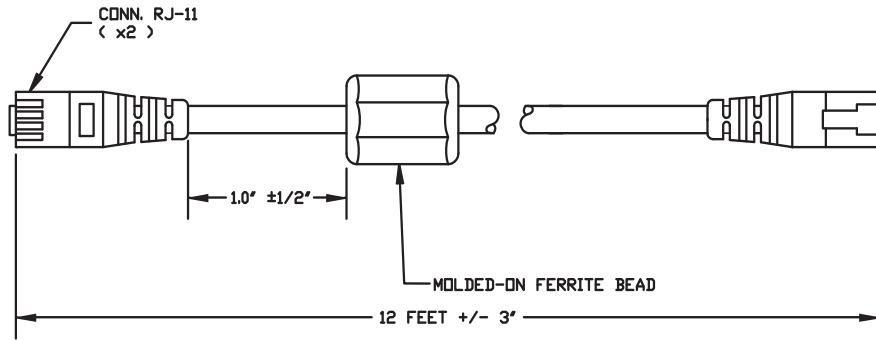

Pin	Signal Name
1	Receive Ring
2	Receive Tip
3	No Connection
4	Transmit Ring
5	Transmit Tip
6	No Connection
7	No Connection
8	No Connection

Analog Telephone (POTS) Cable

This cable connects a Polycom HDX system to an analog telephone line. It has pink RJ-11 connectors on both ends. The maximum approved length for this cable is 100 ft (30 m).

Length	Part Number	RoHS Compliant
12 ft (3.6 m)	2457-20071-001	Yes

WIRING IS "PIN TO PIN" 1-1, 2-2, ETC.

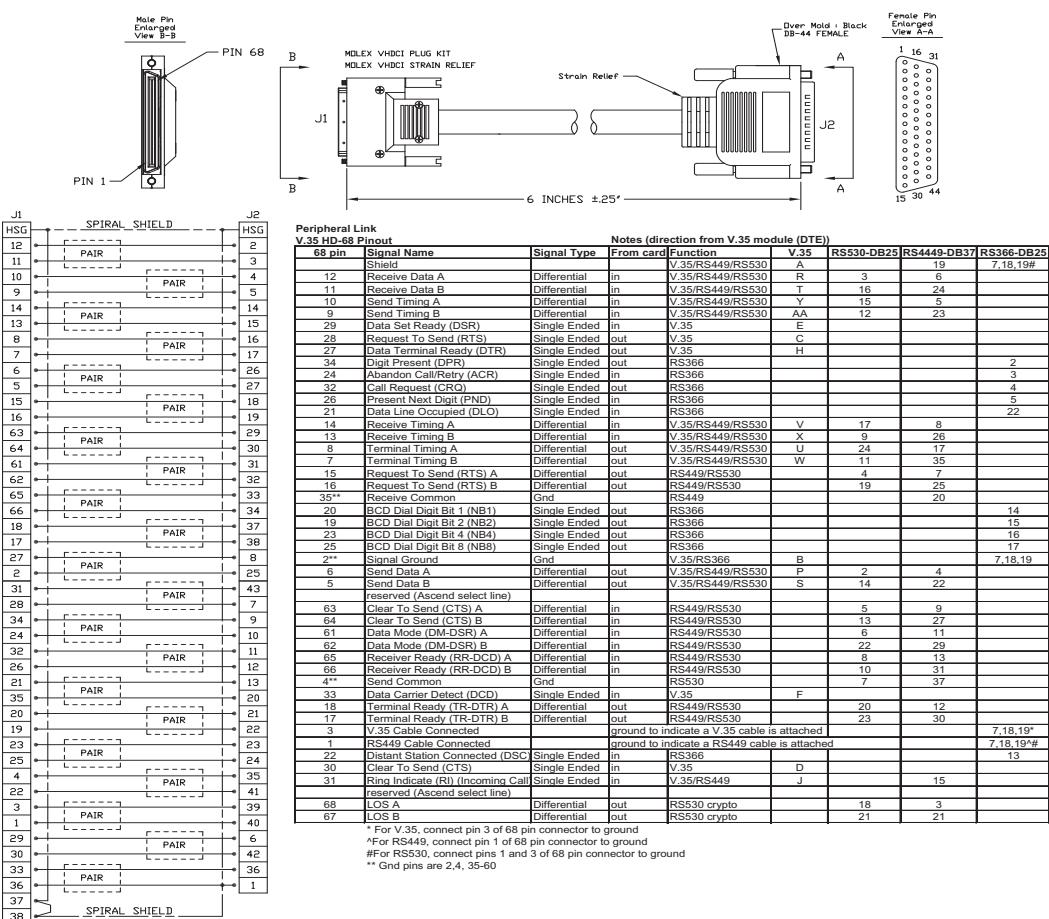

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

V.35/RS-449/RS-530 Serial Adapter

This adapter is used when connecting a Polycom HDX system to other third-party network equipment. It adapts the 68-pin interface to an industry standard 44-pin interface used by some network interface equipment. It is used with Polycom HDX systems that have a V.35/RS-449/RS-530 serial network interface card (NIC) installed.

Length	Part Number	RoHS Compliant
6 in (15.23 cm)	2457-21264-200	Yes

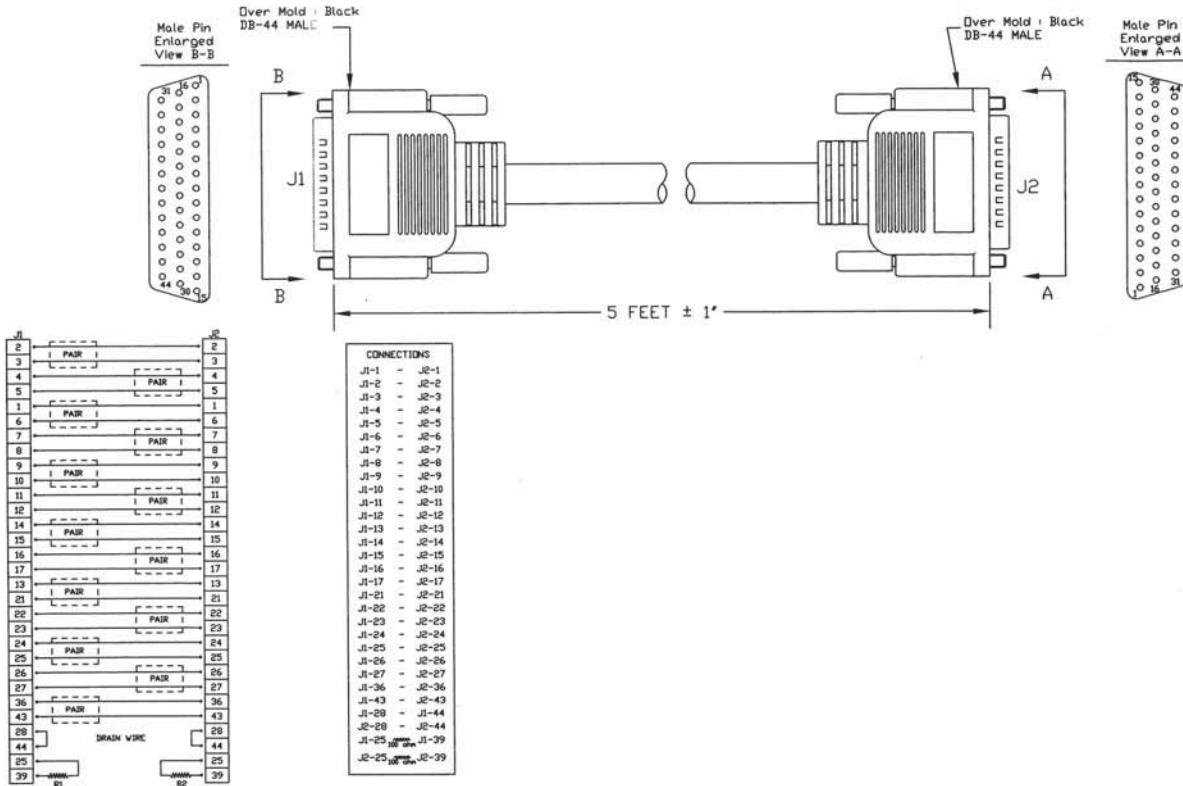

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

V.35 NIC Cable

This cable connects a Polycom HDX system to Ascend network equipment. It is used with the [V.35/RS-449/RS-530 Serial Adapter](#) on page 2-8 to connect to network equipment that has the HD-44 pin interface. It has HD-44 M connectors on both ends and is used with Polycom HDX systems that have a serial network interface card (NIC) installed.

Length	Part Number	RoHS Compliant
5 ft (1.65 m)	2457-10608-200	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

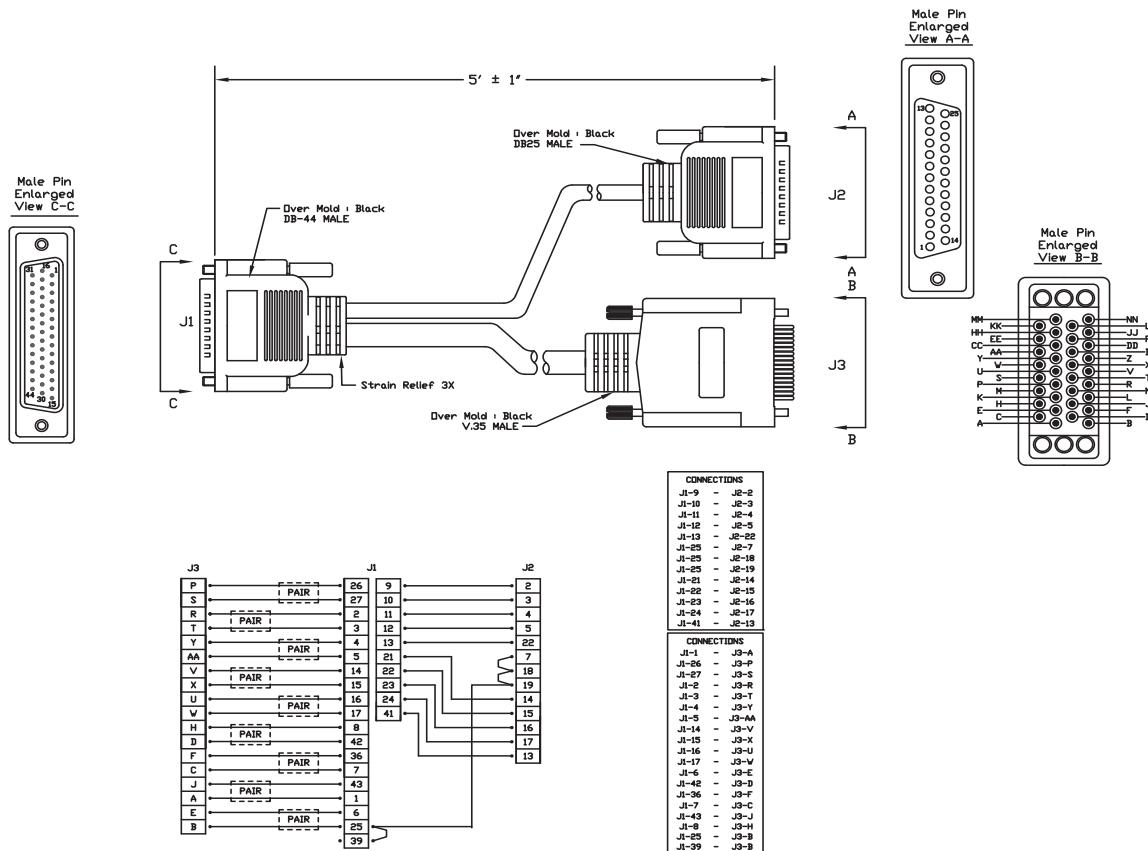

V.35 and RS-366 Serial Cable

This cable connects a Polycom HDX system to third-party network equipment. It is used with the [V.35/RS-449/RS-530 Serial Adapter](#) on page 2-8 to connect to network equipment that has a V.35/RS-366 interface. It is HD-44 M to "Y" Winchester 34M/RS-366 DB-25M and is used with Polycom HDX systems that have a serial network interface card (NIC) installed.

Length	Part Number	RoHS Compliant
5 ft (1.65 m)	2457-10609-200	Yes

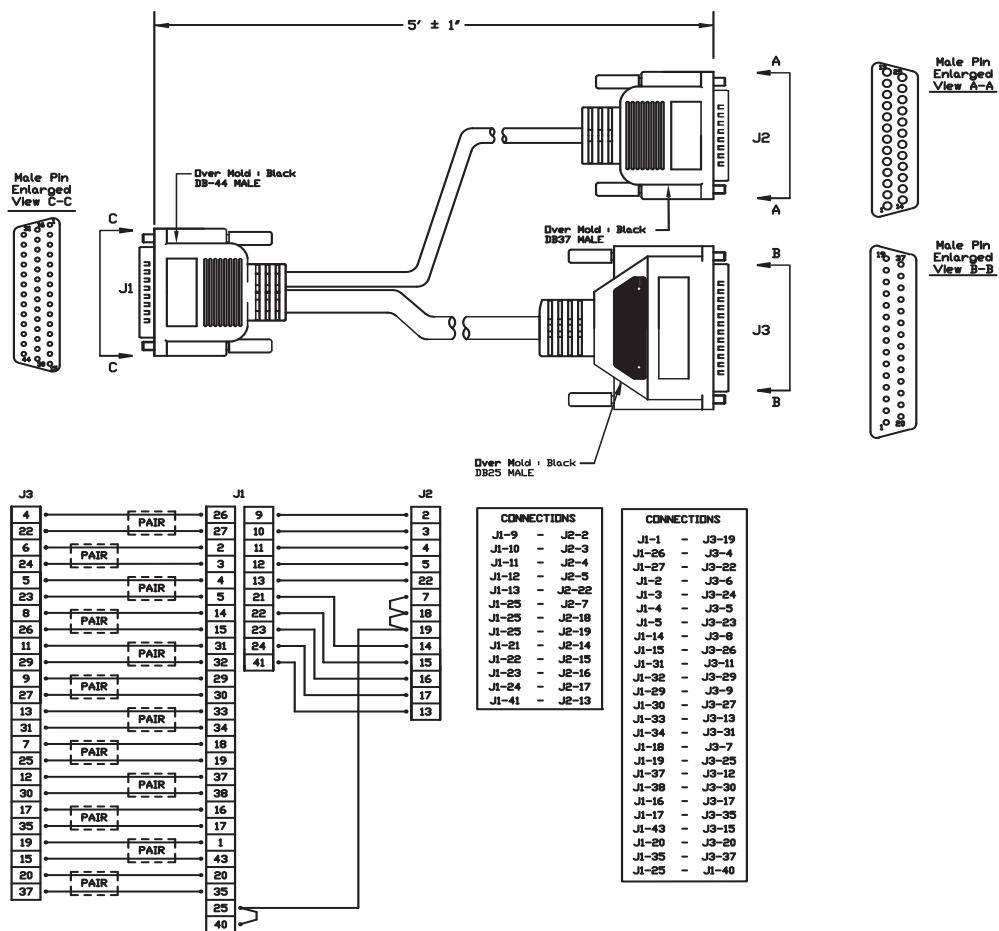

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

RS-449 and RS-366 Serial Cable

This cable connects a Polycom HDX system to third-party network equipment. It is used with the V.35/RS-449/RS-530 serial adapter on page [V.35/RS-449/RS-530 Serial Adapter](#) on page 2-8 to connect to network equipment that has an RS-449/RS-366 interface. It is HD-44 M to "Y" RS-449 DB-37M/RS-366 DB-25M and is used with Polycom HDX systems that have a serial network interface card (NIC) installed.

Length	Part Number	RoHS Compliant
5 ft (1.65 m)	2457-10610-200	Yes

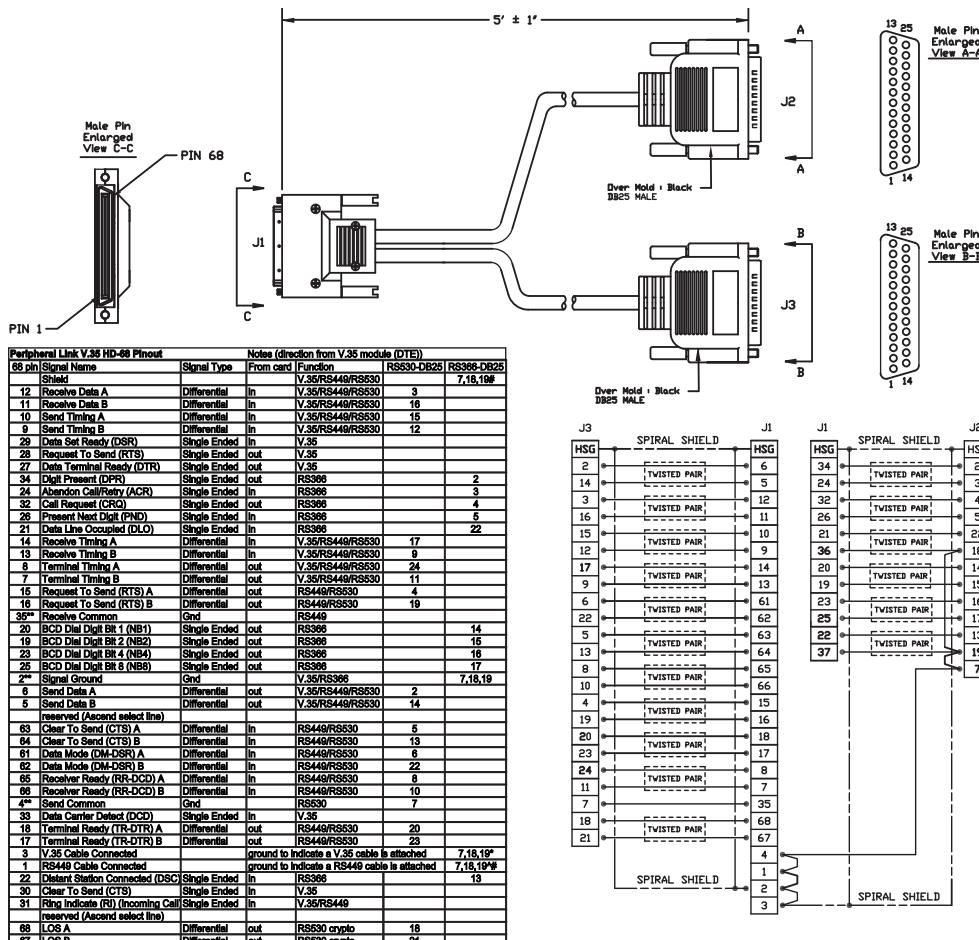

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

RS-530 with RS-366 Serial Cable

This cable connects a Polycom HDX system to third-party network equipment. It is used with the [V.35/RS-449/RS-530 Serial Adapter](#) on page 2-8 to connect to network equipment that has an RS-530/RS-366 interface. It is HD-68M to "Y" DB-25M and is used with Polycom HDX systems that have a serial network interface card (NIC) installed.

Length	Part Number	RoHS Compliant
5 ft (1.65 m)	2457-21263-200	Yes

*For V.35, connect pin 3 of 68 pin connector to ground

*For R5449, connect pin 1 of 68 pin connector to ground

#For R5308, connect pins 1 and 3 of 68 pin connector to ground

** Gnd pins are 2, 35-60

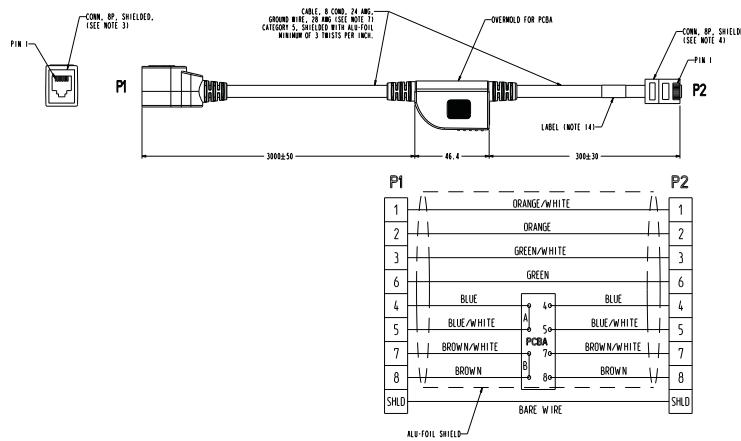

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Polycom Touch Control Power Adapter

This adapter connects the Polycom Touch Control device to the LAN and a power supply (part number 2200-42740-XXX) for rooms that do not have Power over Ethernet (PoE).

Length	Part Number	RoHS Compliant
2.1 ft (.61 m)	2457-40054-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

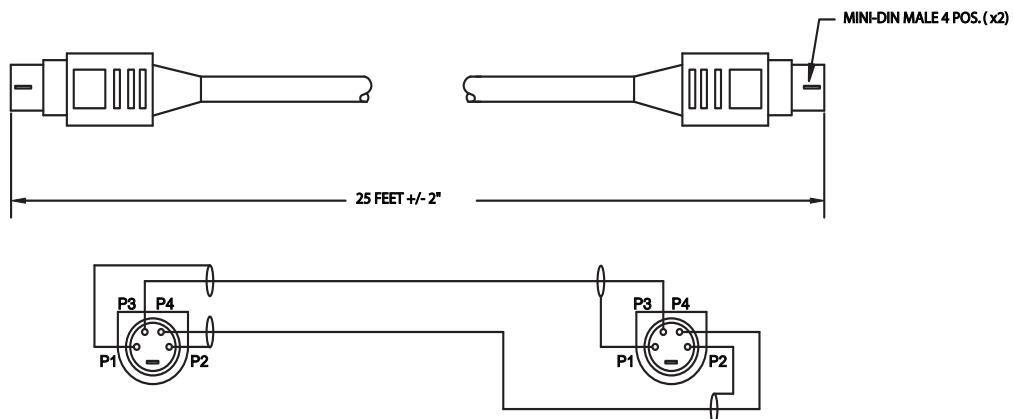

Video and Camera Cables

S-Video Cable

These cables connect a Polycom HDX system to a monitor or camera. They have yellow 4-pin mini-DIN connectors on both ends and are used with all Polycom HDX systems. The maximum approved length for this cable is 200 ft (60 m).

Length	Part Number	RoHS Compliant
8 ft (2.4 m)	2457-08410-002	Yes
25 ft (7.6 m)	2457-08409-002	Yes
50 ft (15 m)	2457-09204-200	Yes

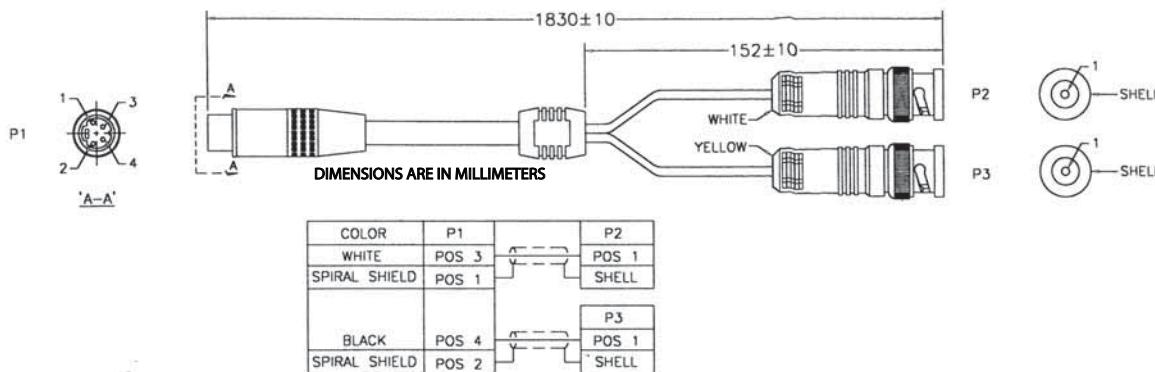

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

BNC to S-Video Cable

This cable connects S-Video devices to a Polycom HDX system. It is 4-pin male mini-DIN to dual BNC male. The maximum approved length for this cable is 100 ft (30 m).

Length	Part Number	RoHS Compliant
6 ft (1.8 m)	2457-21489-200	Yes

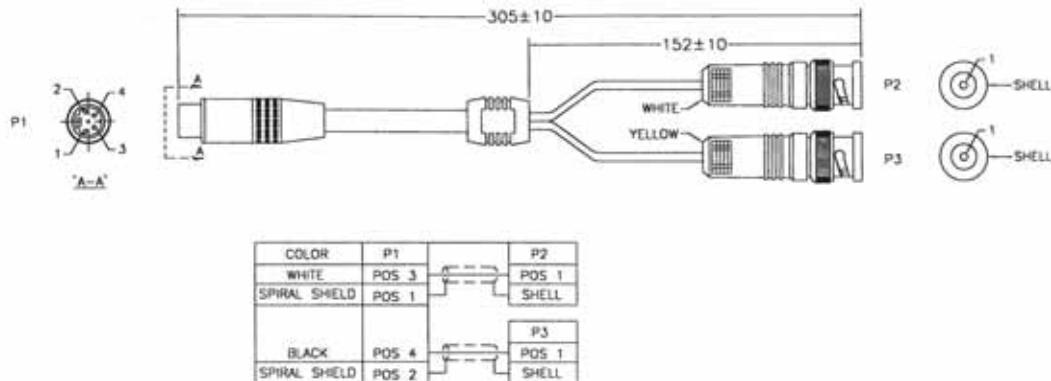

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

BNC to S-Video Adapter

This adapter may be required when connecting standard S-Video cables to a Polycom HDX system. It is dual BNC male to 4-pin female mini-DIN.

Length	Part Number	RoHS Compliant
1 ft (.3 m)	2457-21490-200	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

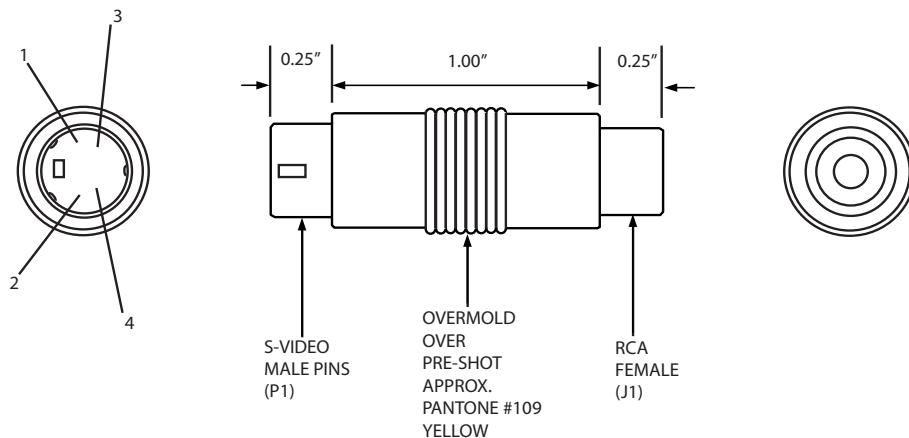

S-Video to RCA Adapter

This adapter is used when connecting a standard composite video cable (or the video jack on a VCR cable) into an S-Video connector on a Polycom HDX system. It is yellow RCA to 4-pin mini-DIN.

This adapter can be used along with the BNC to S-Video cable (part number 2457-21489-200) or BNC to S-Video adapter (part number 2457-21490-200) to connect a composite monitor or VCR to a BNC connector on a Polycom HDX 9000 series system.

Length	Part Number	RoHS Compliant
1.5 in	1517-08822-002	Yes

WIRE LIST	
P1-3	→ J1-CENTER
P1-4	→ N.C.
P1-1	→ P1-2 → J1-SHIELD
P1-SHIELD	↔ N.C.

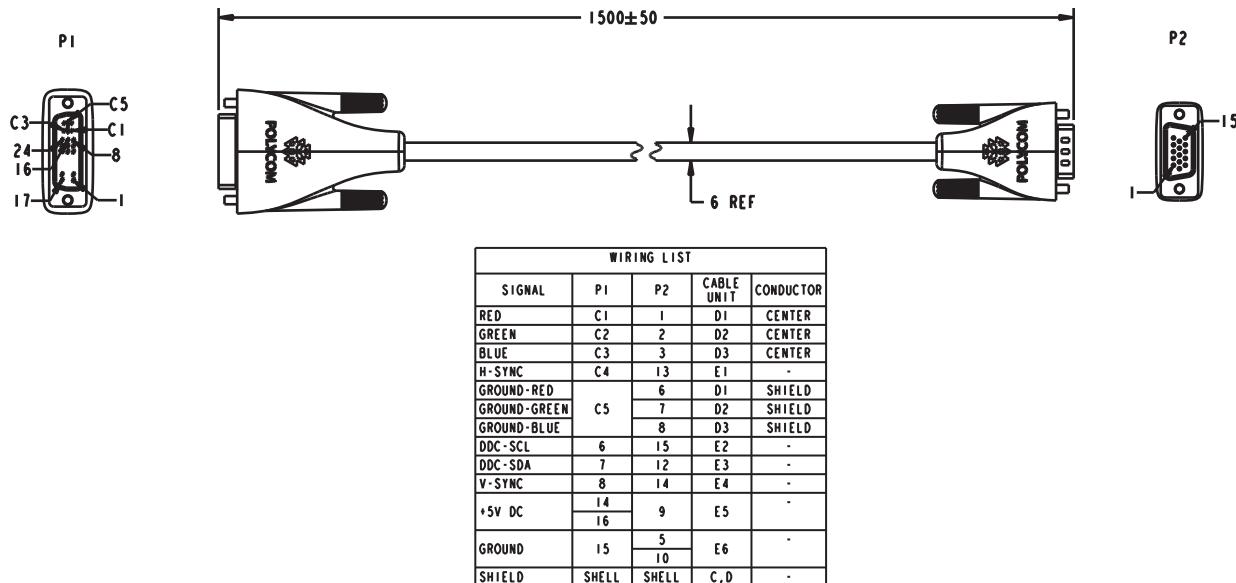

Drawings and part numbers are provided for reference only and might not be available separately. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom Products/Vertical Solutions to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

DVI to VGA Monitor Cable

This cable connects a Polycom HDX system DVI-I output to a VGA monitor. It can also be used to connect a computer to one of the DVI-A video inputs on a Polycom HDX system. It is male DVI-A to male HD-15.

Length	Part Number	RoHS Compliant
4 ft 6 in (1.5 m)	2457-25182-001	Yes
9 ft 10 in (3 m)	2457-23792-001	Yes
25 ft (7.6 m)	2457-23792-025	Yes

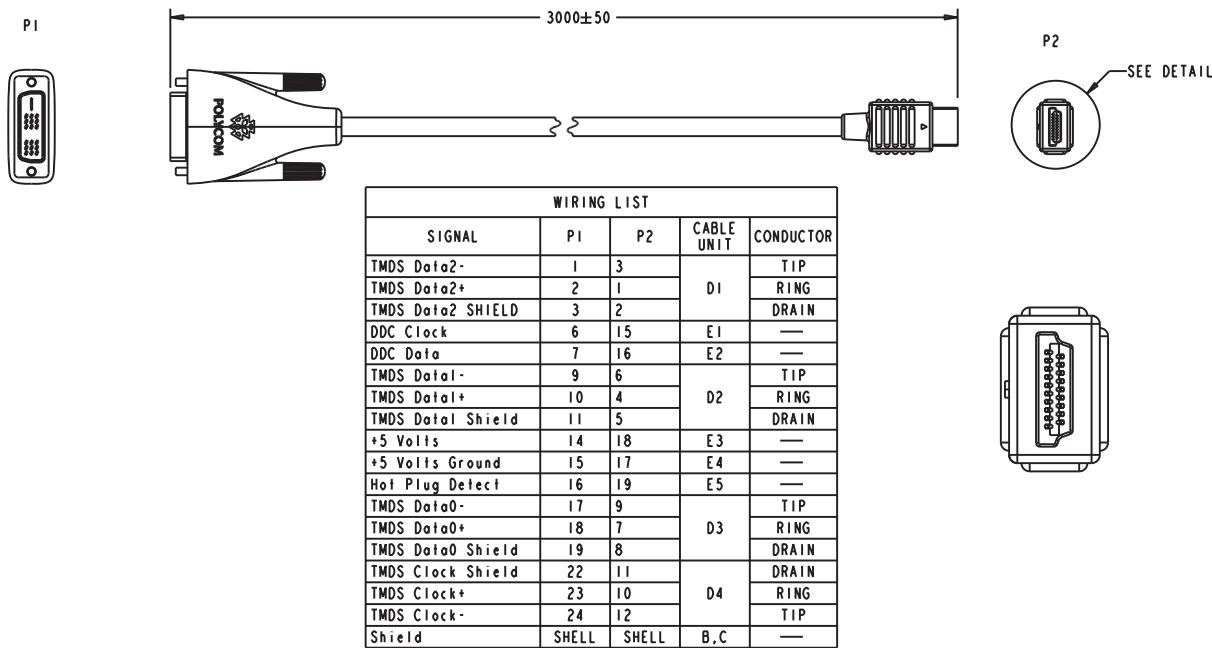

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDMI Monitor Cable

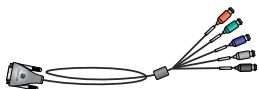

This cable connects the Polycom HDX system DVI-I output to an HDMI monitor. It is male DVI-D to male HDMI.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	2457-23905-001	Yes

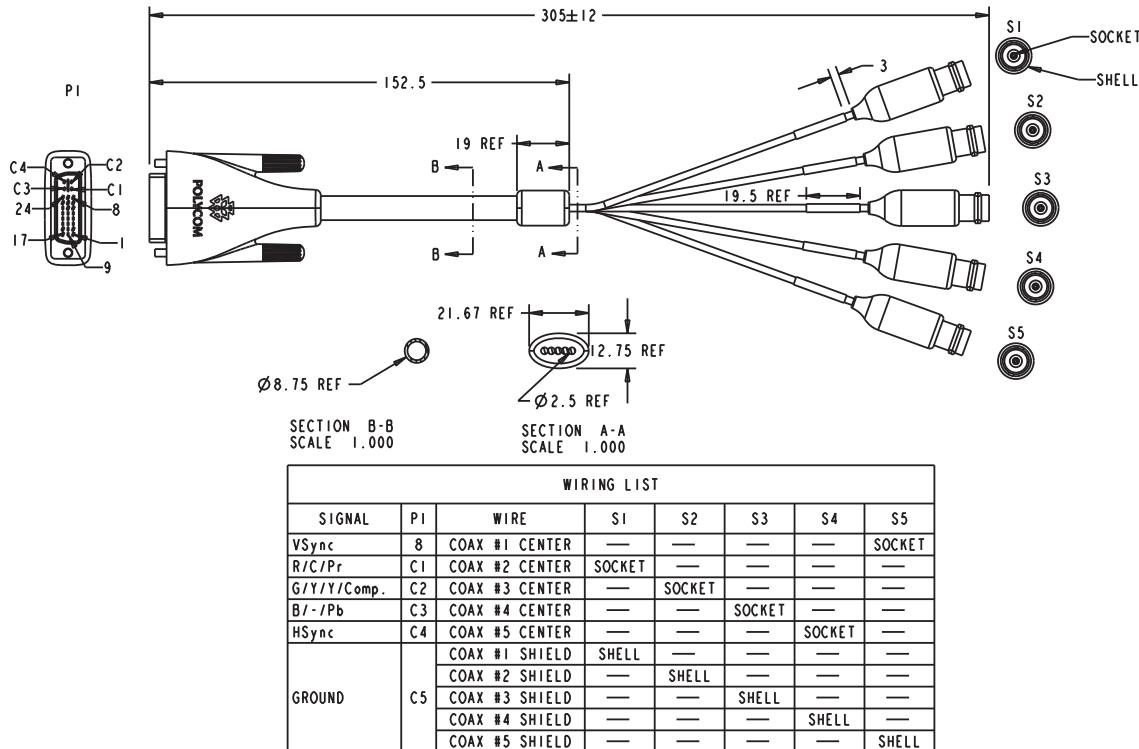

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

BNC Monitor Adapter Cable

This cable connects the Polycom HDX system DVI-I output to a variety of analog display devices with composite, S-Video, component YPbPr, or RGBHV inputs. It is male DVI-A to five female BNC connectors.

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-23533-001	Yes

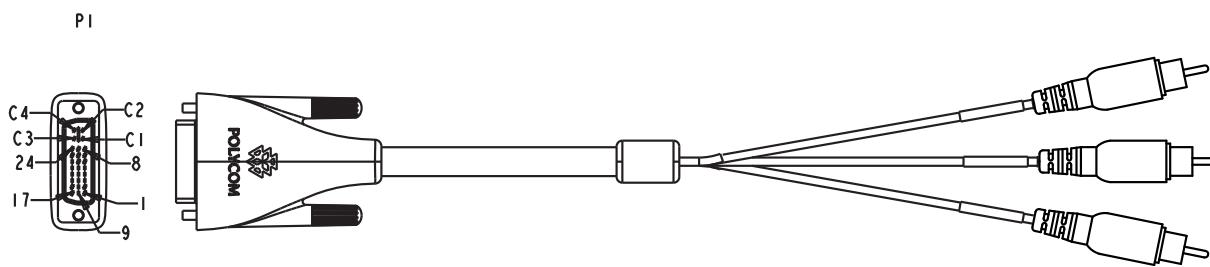

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Polycom HDX Component Monitor Cable

This cable connects a Polycom HDX system DVI-I output to a monitor with component connections. It is male DVI-A to three RCA.

Length	Part Number	RoHS Compliant
6 ft (1.8 m)	2457-52698-006	Yes
12 ft (3.6 m)	2457-52698-012	Yes

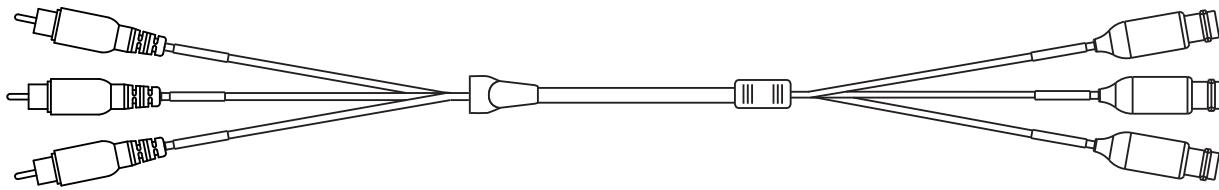

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDX Component Video Cable

This cable connects a Polycom HDX system to a video playback device with component connections. It is three RCA to three male BNC.

Length	Part Number	RoHS Compliant
25 ft (7.6 m)	2457-52688-025	Yes

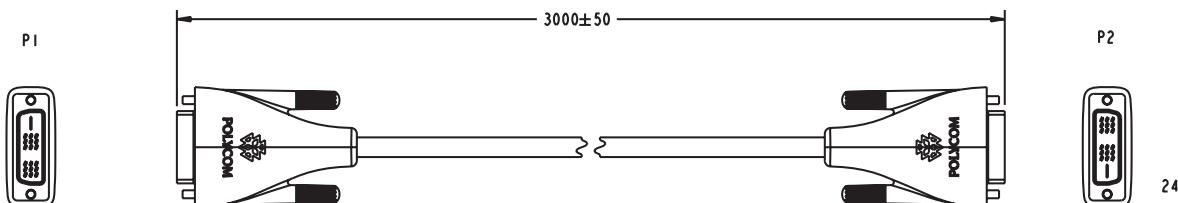

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

DVI-D Monitor Cable

This cable connects a Polycom HDX system DVI-I output to a DVI-D monitor. It is male DVI-D on both ends.

Length	Part Number	RoHS Compliant
4 ft 6 in (1.5 m)	2457-25181-001	Yes
9 ft 10 in (3 m)	2457-23793-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

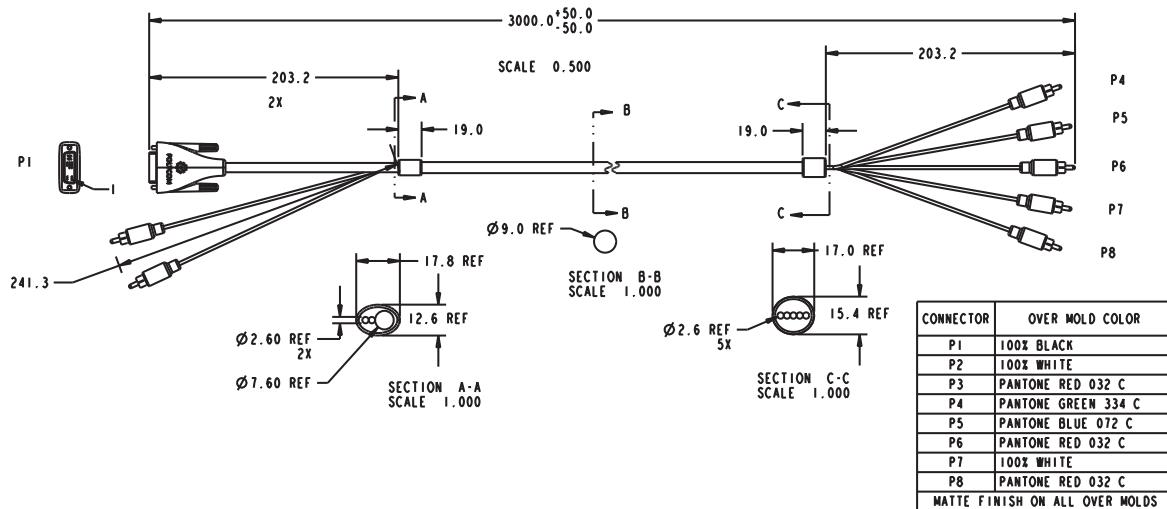

Component A/V Monitor Cable

This cable connects a Polycom HDX system DVI-I video output and stereo audio output to a monitor with component video and stereo audio connections. It is male DVI-A and dual male RCA to five RCA.

You must use the [Audio Adapter Cable](#) on page 2-54 to connect the dual RCA connectors on this component A/V monitor cable to the dual Phoenix connectors on the Polycom HDX system.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	2457-24772-001	Yes

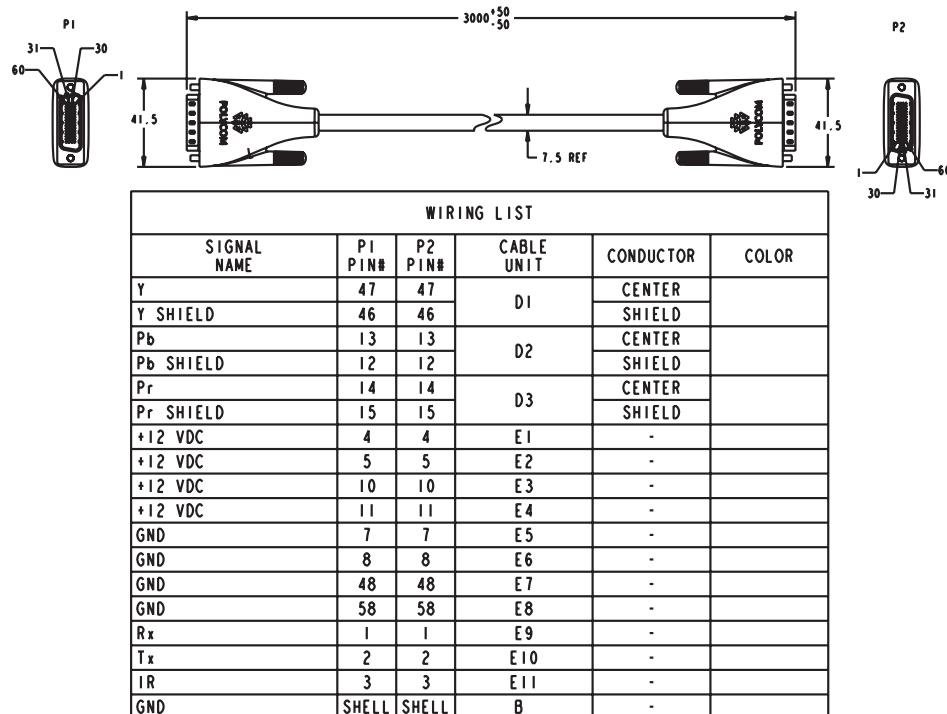

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI Analog Camera Cable

This cable connects a Polycom HDX system to a Polycom EagleEye HD, Polycom EagleEye II, Polycom EagleEye III, or Polycom EagleEye Director camera. This cable can be connected to the EagleEye View camera, but does not support audio. It has male HDCI connectors on both ends.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	2457-23180-003	Yes
33 ft (10 m)	2457-23180-010	Yes
50 ft (15 m)	2457-23180-015	Yes
100 ft (30 m)	2457-23180-030	Yes

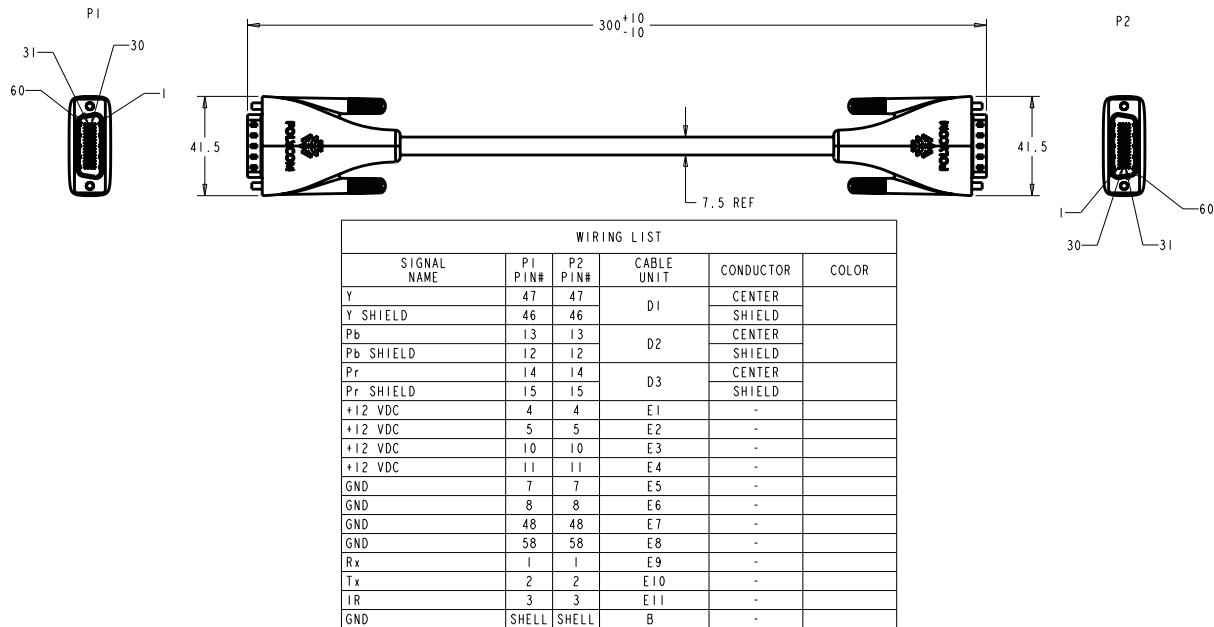

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI Polycom EagleEye Director Camera Cable

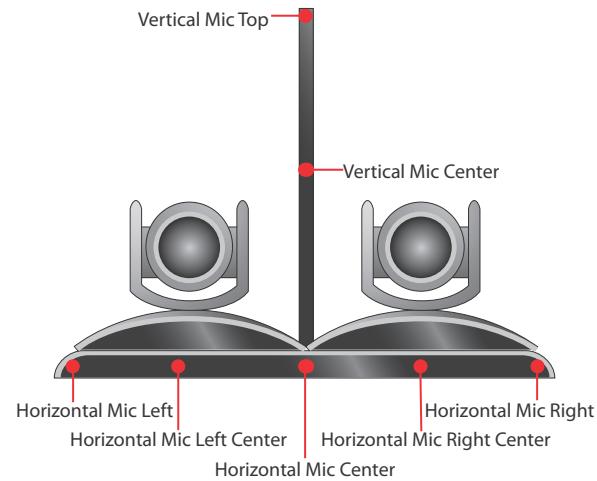

This cable connects a Polycom EagleEye II or Polycom EagleEye III camera to the Polycom EagleEye Director base. It has male HDCI connectors on both ends.

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-26122-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

As shown in the following figure, the EagleEye Director camera has seven microphones embedded in the base.

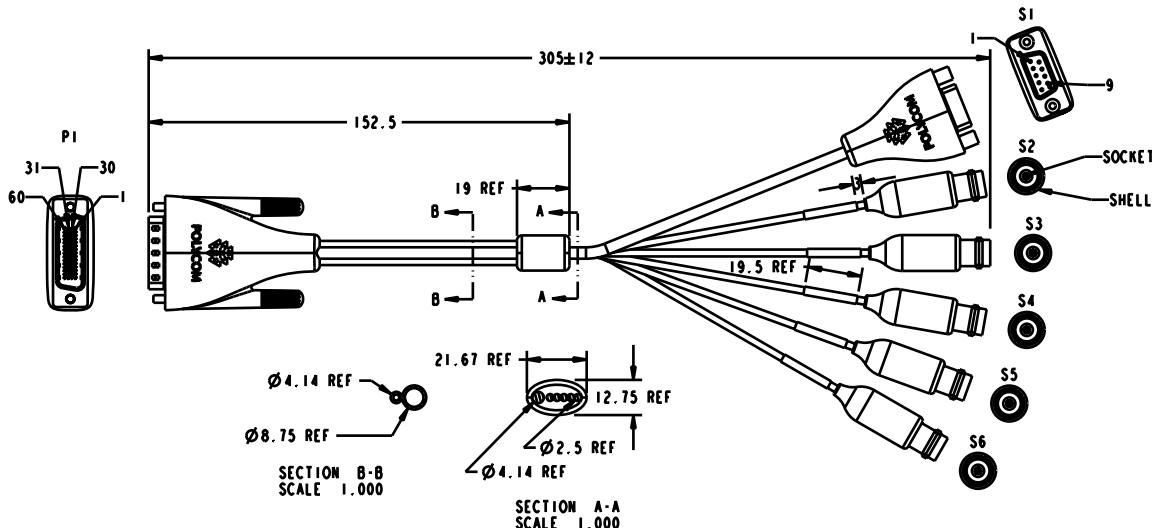

For information about positioning the camera, refer to the *Administrator's Guide for Polycom HDX Systems*.

HDCI Camera Break-Out Cable

This cable breaks out the HDCI camera cable video and control signals to standard interfaces. This cable can be connected to the EagleEye View camera, but does not support audio. The five BNC connectors can be used to carry composite video, S-Video, or analog component YPbPr video. The DB-9 connector is used to connect to PTZ camera control interfaces. It is male HDCI to five female BNC and one female DB-9.

Length	Part Number	RoHS Compliant
1ft (0.3 m)	2457-23521-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

VCR/DVD Composite Cable

This cable connects a Polycom HDX system to a VCR or DVD player. It has triple RCA connectors on both ends. The Polycom HDX system requires a female RCA to male BNC adapter for the yellow video RCA connector, and the [Audio Adapter Cable](#) on page 2-54. The maximum approved length for this cable is 50 ft (15 m).

Length	Part Number	RoHS Compliant
8 ft (2.6 m)	2457-08412-001	—

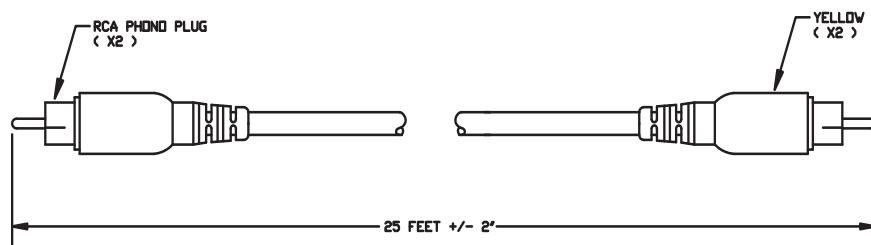

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Composite Video Cable

This cable connects a Polycom HDX system to a monitor or camera. It has single yellow RCA connectors on both ends. The Polycom HDX system requires a female RCA to male BNC adapter in order to connect to composite input or output. The maximum approved length for this cable is 100 ft (30 m).

Length	Part Number	RoHS Compliant
25 ft (7.6 m)	2457-09207-001	—

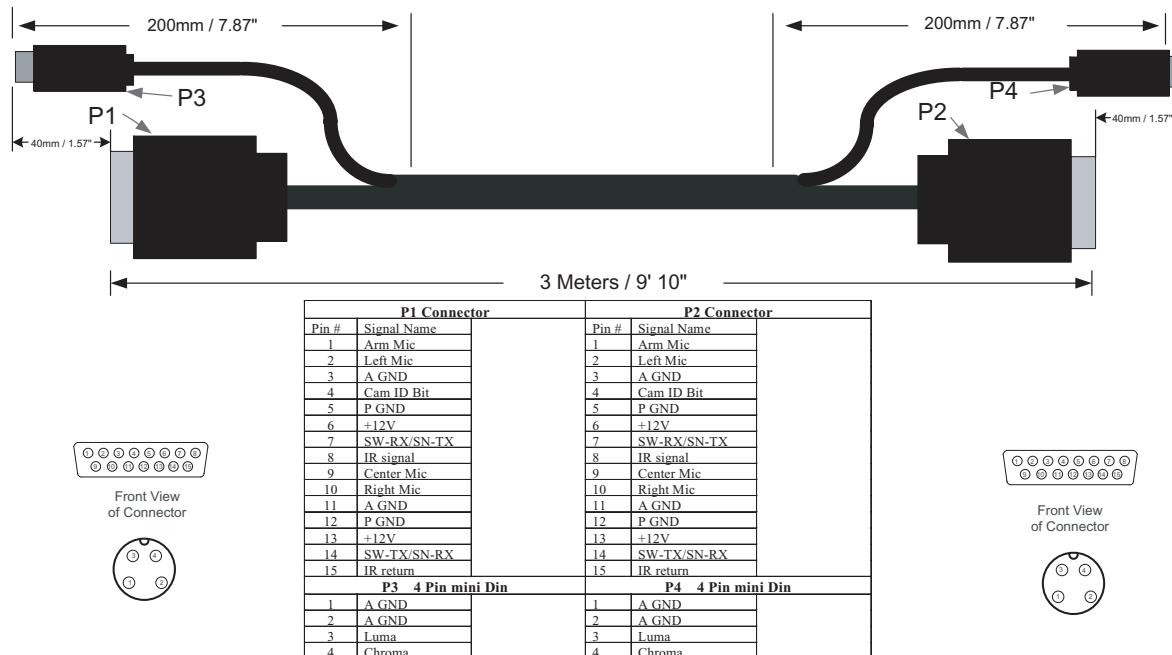

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

PowerCam Plus Primary Cable

This cable connects a Polycom HDX system to a Polycom PowerCam Plus camera using the [HDCI PowerCam Plus Adapter Cable](#) on page 2-35. It has 4-pin mini-DIN and DB-15 connectors on both ends.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	1457-50105-002	Yes
30 ft (9 m)	1457-50105-230	Yes
50 ft (15 m)	1457-50105-250	Yes
100 ft (30 m)	1457-50105-300	Yes
150 ft (45 m)	1457-50105-350	Yes

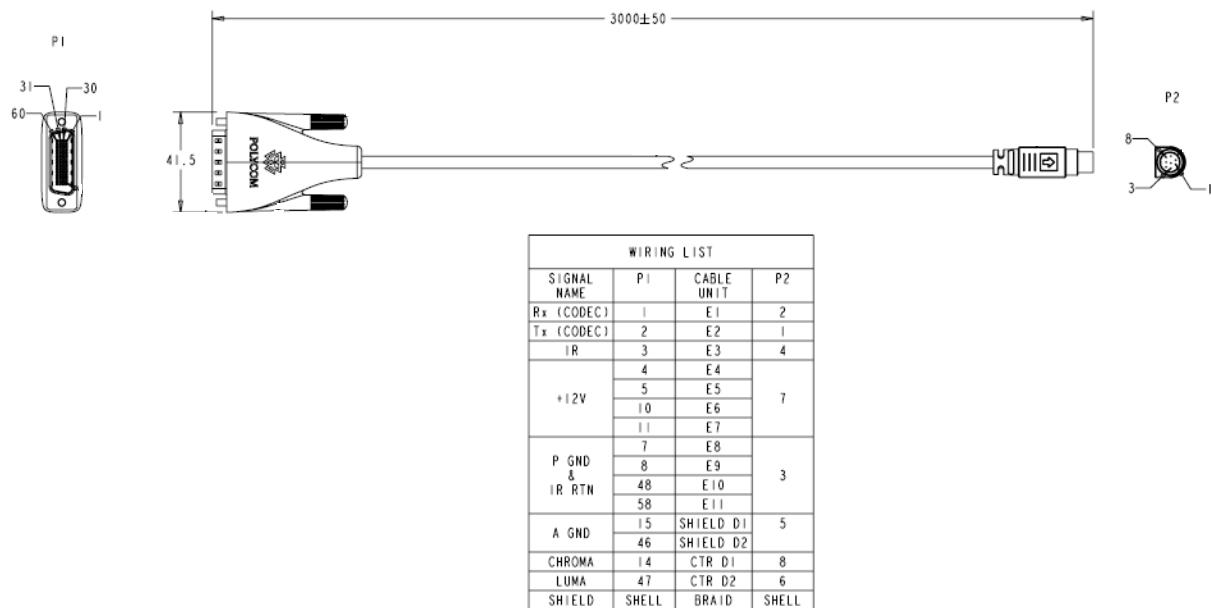

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI PowerCam Cable

This cable connects a Polycom HDX system to a Polycom PowerCam camera. It is HDCI to 8-pin mini-DIN.

Length	Part Number	RoHS Compliant
10 ft (3 m)	2457-28168-001	Yes

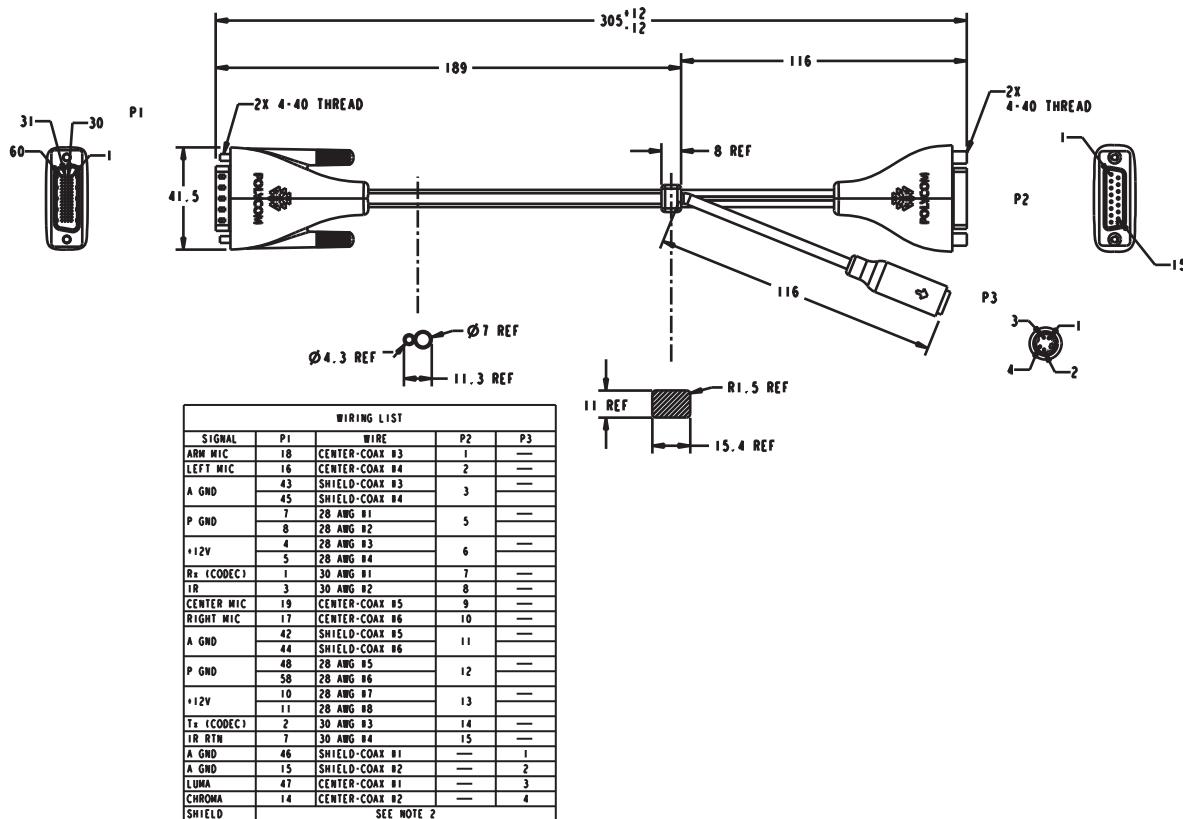

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI PowerCam Plus Adapter Cable

This cable adapts a PowerCam Plus cable to HDCI. It is HDCI to 4-pin mini-DIN and DB-15. It can also be used with the [PowerCam Primary Camera Cable](#) on page 2-41 to connect PowerCam.

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-23481-001	Yes

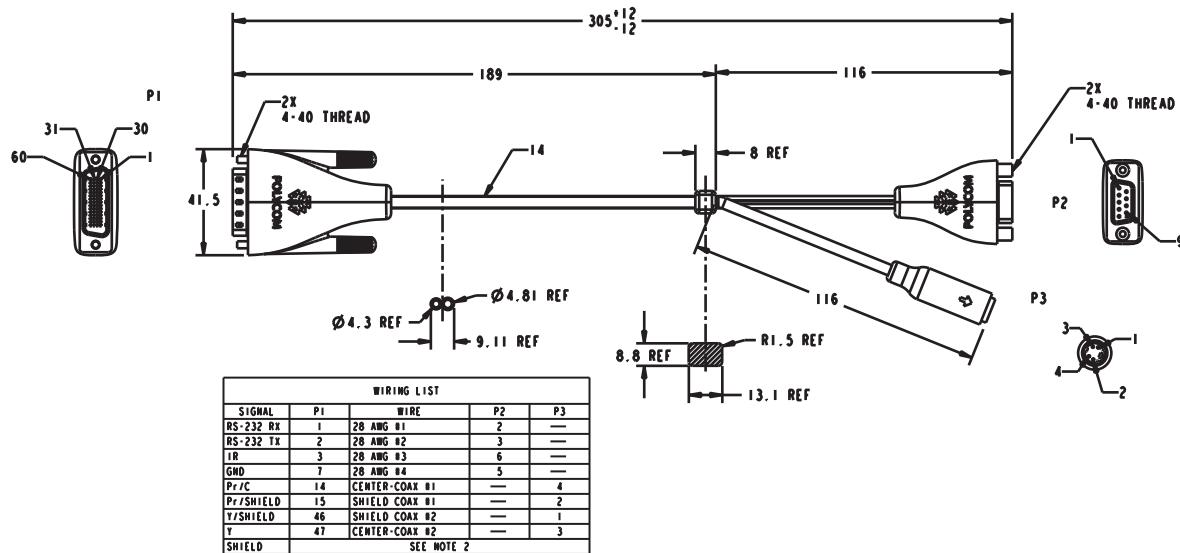

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI VISCA Adapter Cable

This cable connects a Polycom HDX system HDCI video input to SD cameras with VISCA control that use a DB-9 serial connector. It is HDCI to 4-pin mini-DIN and DB-9. Standard S-Video and DB-9 serial cables are required to connect this cable to the camera.

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-23486-001	Yes

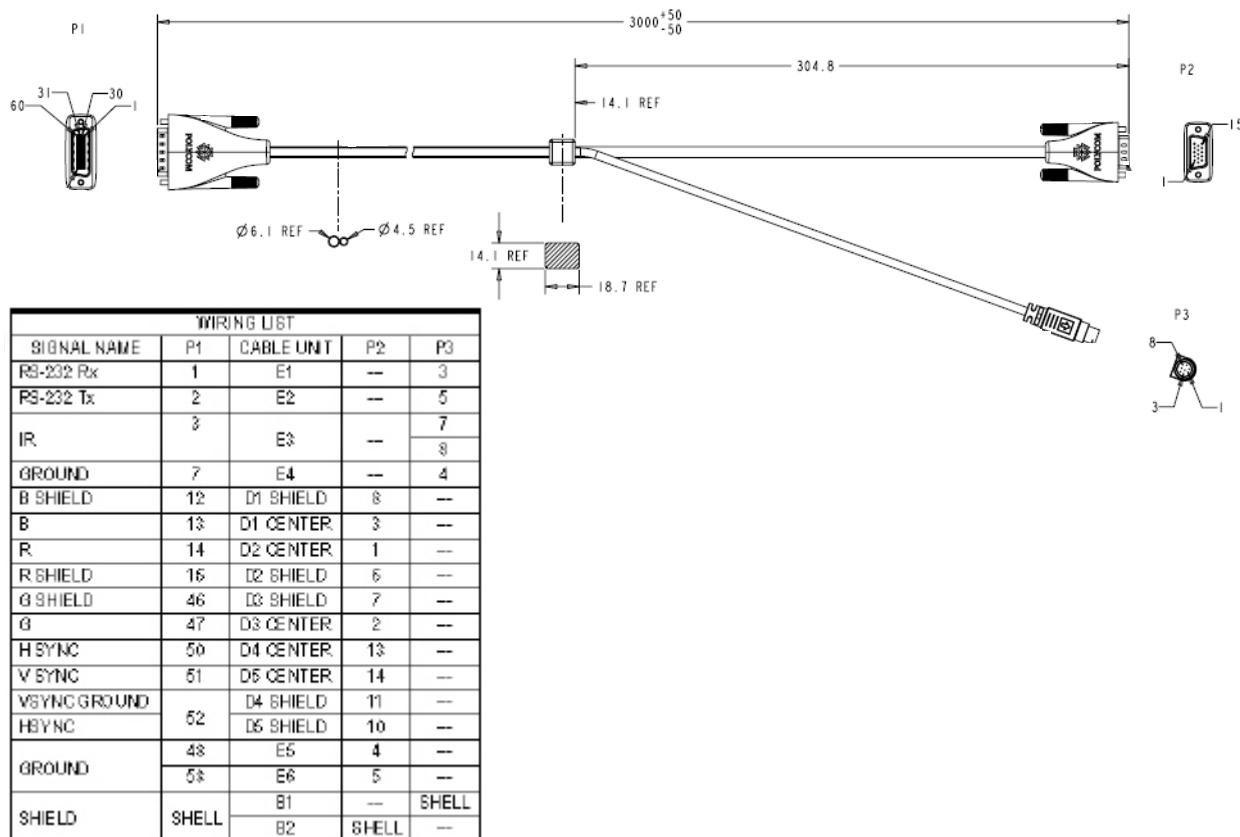

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI Polycom EagleEye 1080 Camera Cable

This cable connects a Polycom HDX system HDCI video input to a Polycom EagleEye 1080 camera or to a Sony HD camera. The cable is HDCI to 8-pin mini-DIN and HD-15.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	2457-28153-001	Yes
33 ft (10 m)	2457-28154-001	Yes
50 ft (15m)	2457-28154-050	Yes
100 ft (30m)	2457-28154-100	Yes

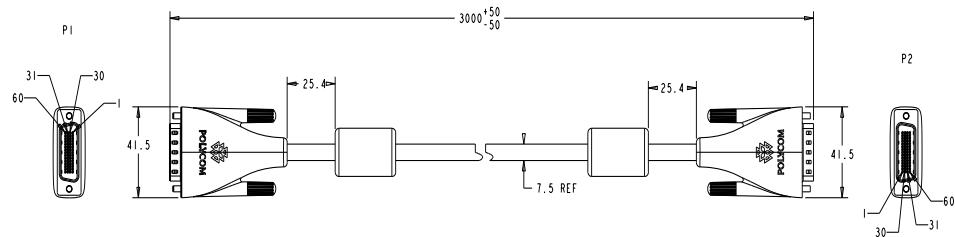

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

HDCI Polycom EagleEye View Camera Cable

This cable connects a Polycom HDX system HDCI video input to a Polycom EagleEye View camera. It has male HDCI connectors on both ends.

Length	Part Number	RoHS Compliant
9 ft 10 in (3 m)	2457-29759-001	Yes
33 ft (10 m)	2457-29759-010	Yes

HDCI Sony VISCA Adapter Cable

This cable connects a Polycom HDX system HDCI video input to a camera using Sony 8-pin mini-DIN VISCA and S-Video. It is HDCI to 8-pin mini-DIN and S-Video. Standard S-Video and Sony VISCA cables are required to connect this cable to the camera. The VISCA cable is a straight-through male 8-pin mini-DIN to male 8-pin mini-DIN serial cable.

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-23549-001	Yes

PowerCam Break-Out Cable

This cable connects S-Video and control cables and a power supply to a Polycom PowerCam camera. This combination is required when using the PowerCam as the primary camera more than 10 ft away from the system, or as the secondary camera. It is 8-pin mini-DIN to 3-way breakout block.

A separate power supply is required (part number 1465-52621-036).

Length	Part Number	RoHS Compliant
6 ft (1.8 m)	2457-50526-200	Yes

PowerCam Plus/VISCA Control Cable

8-pin mini-DIN to DB-15

This cable adapts the 8-pin mini-DIN VISCA control interface to the PowerCam Plus DB-15 control interface. It is used with the PowerCam Break-Out cable and the HDCI PowerCam Plus adapter cable. It is 8-pin mini-DIN to DB-15.

Length	Part Number	RoHS Compliant
50 ft (15 m)	1457-50527-201	Yes

Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

8-pin mini-DIN to DB-9

This cable connects Polycom HDX system serial port inputs to a non-Polycom camera using a VISCA 8-pin DIN connector, or to a Polycom PowerCam break-out cable with a PowerCam camera. It is 8-pin mini-DIN to DB-9. RTS/CTS and IR are not supported on this cable.

Length	Part Number	RoHS Compliant
50 ft (15 m)	2457-10029-200	Yes

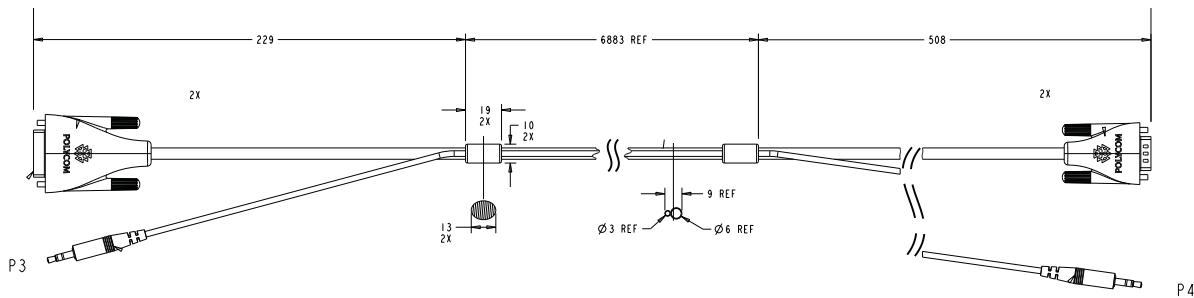

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

People+Content Cable

This cable connects a PC with VGA and 3.5mm stereo audio output to the DVI and 3.5 mm audio input of the HDX system.

Length	Part Number	RoHS Compliant
25 ft (7.62 m)	2457-28665-001	Yes

DRAIN WIRE		3		3
SHIELD		SHELL		SHELL

P1 - RJ-45 shielded plug, Tyco 5-569552 or equivalent

P2 - RJ-45 shielded plug, Tyco 5-569552 or equivalent

When connecting two Polycom HDX microphone host devices, a cross-over cable is required. To build a custom cross-over cable for this purpose, you should use shielded CAT5 or better cable. Each end of the custom cable should have a shielded RJ-45 plug connector that connects to a Polycom HDX microphone host device. The maximum supported cable length is 100 feet.

Due to differing use of the twisted pairs within the cable, the pinout for this custom CAT5 cross-over cable is not the same as the pinout that is used for standard Ethernet cables. Do not use standard Ethernet cables. Instead, for best cable performance, refer to the following pinout information to create this custom CAT5 cross-over cable.

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

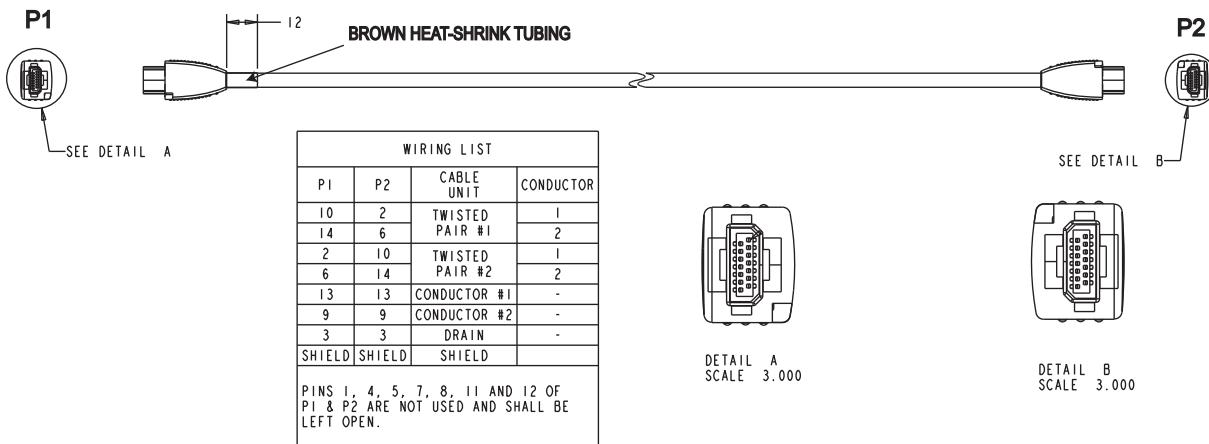

Polycom HDX Microphone Array Cable

For more information about supported microphone configurations, refer to the *Administrator's Guide for Polycom HDX Systems*.

This cable connects two Polycom HDX microphones together. This cable can also be used with the [Polycom HDX Microphone Array Cable Adapter](#) on page 2-49 to connect a Polycom HDX system to a Polycom HDX microphone array or to a SoundStation IP 7000 phone. It has male Walta connectors on both ends.

Length	Part Number	RoHS Compliant
15 ft (4.6 m)	2457-23215-001	Yes
25 ft (7.6 m)	2457-23216-001	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

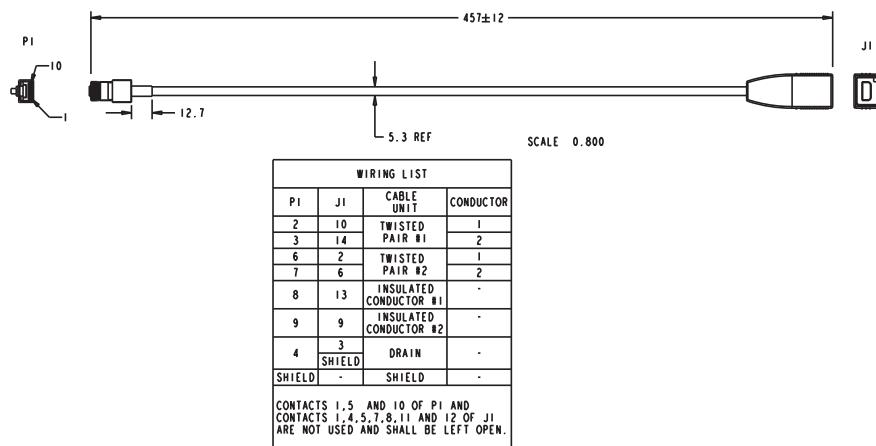

Polycom HDX Microphone Array Cable Adapter

For more information about supported microphone cable configurations, refer to the *Administrator's Guide for Polycom HDX Systems*.

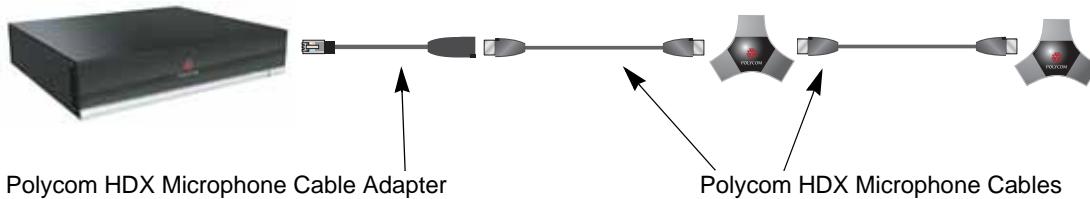

This cable adapts the [Polycom HDX Microphone Array Cable](#) on page 2-48 for use with the Polycom HDX 9000 Series system and the SoundStructure C-Series mixer. It is male RJ-45 to female Walta.

Length	Part Number	RoHS Compliant
18 in (0.5 m)	2457-23716-001	Yes

The following diagram shows microphone connection options for Polycom HDX 9000 Series systems, using cables available from Polycom.

Do not connect Polycom microphone cables or devices to the Ethernet port, and do not connect an Ethernet cable or device to the Polycom microphone input.

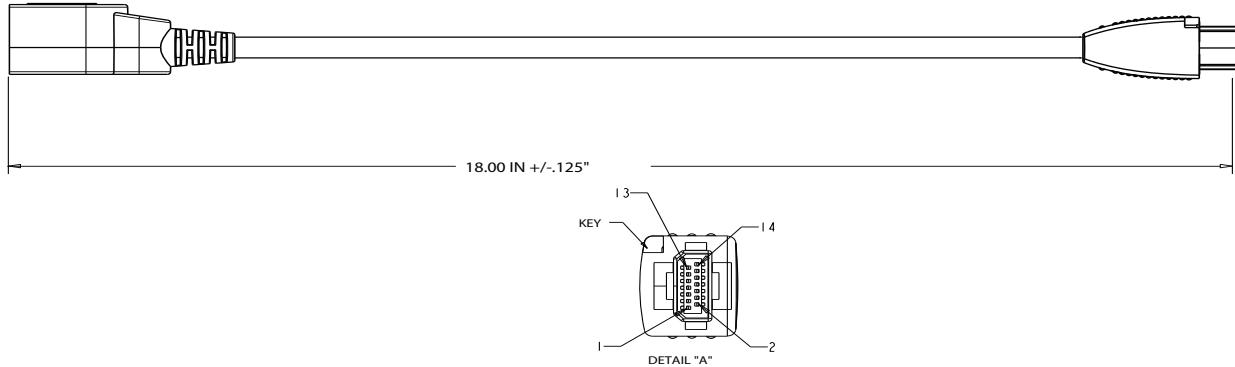

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Polycom HDX Ceiling Microphone Adaptor Cable

This cable connects a Polycom HDX system to the Polycom microphone array. It is male Walta to RJ-45.

Length	Part Number	RoHS Compliant
25 ft (7.6 m)	2457-25646-001	Yes

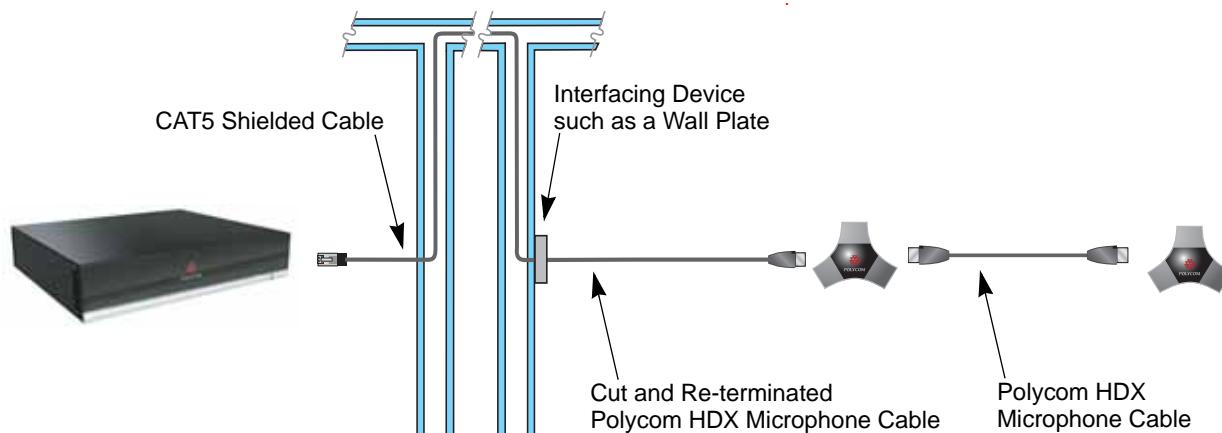

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Custom Cabling for Polycom HDX Microphones

You can create a custom-length cable that connects a Polycom HDX system to a Polycom HDX microphone. Start with the microphone cable (part number 2457-23216-001), and cut off the P1 end. Using the wiring tables shown, create a custom cable from the microphone to a wall plate or other interfacing device. Next, from the wall plate or other interfacing device, run shielded CAT5 or better cable to the Polycom HDX system, terminating with a shielded RJ-45 plug connector.

The total length from the Polycom HDX system to the first Polycom microphone can vary between 18 in and 100 ft. The maximum length between subsequent microphones is 25 ft.

The following diagram shows an example of longer custom cabling from a Polycom HDX system to a Polycom microphone or a Polycom SoundStation IP 7000 Phone.

The following steps explain how to wire this custom cable configuration.

- 1 Identify the P1 connector on the Polycom HDX microphone cable according to the location of the brown heat-shrink tubing as shown on [page 2-48](#). Remove the P1 connector and skip to step 4. Note that two separate vendors manufacture these cables, which are electrically equivalent but have different color coding. If you cannot identify the P1 connector, remove either connector from the cable and continue with step 2.

The following tables show the color coding for the cable wiring.

VENDOR 1				
COLOR	AWG	P1		P2
RED	28	10		2
ORANGE	28	14		6
YELLOW	28	2		10

SHIELD		SHELL	SHELL

P1 - RJ-45 shielded plug, Tyco 5-569552 or equivalent

P2 - Walta Electronics, M30-558-0051

- 5** Whether you re-terminated the P1 or P2 end of the cable, at this point the cable can be connected directly to the system and to the first microphone. If it is necessary to install an extension to the system's RJ-45 connection on a wall plate or panel, create a custom pinout cable using shielded CAT5 cable. The cable is terminated on one end to either a shielded CAT5

keystone jack or, if using a shielded panel coupler, a shielded RJ-45 plug connector. The other end terminates to a shielded RJ-45 plug that connects to the Polycom HDX system.

COLOR	AWG	P1		P2
WHITE/GREEN	24	1		1
GREEN	24	2		2
WHITE/ORANGE	24	5		5
ORANGE	24	6		6
WHITE/BROWN	24	7		7
BROWN	24	8		8
DRAIN WIRE		3		3
SHIELD		SHELL		SHELL

P1 - RJ-45 shielded Keystone jack, L-com RJ110C5-S or equivalent OR

P1 - RJ-45 shielded plug, Tyco 5-569552 or equivalent with shielded
RJ-45 panel coupler kit (L-com ECF504-SC5E or equivalent)

P2 - RJ-45 shielded plug, Tyco 5-569552 or equivalent

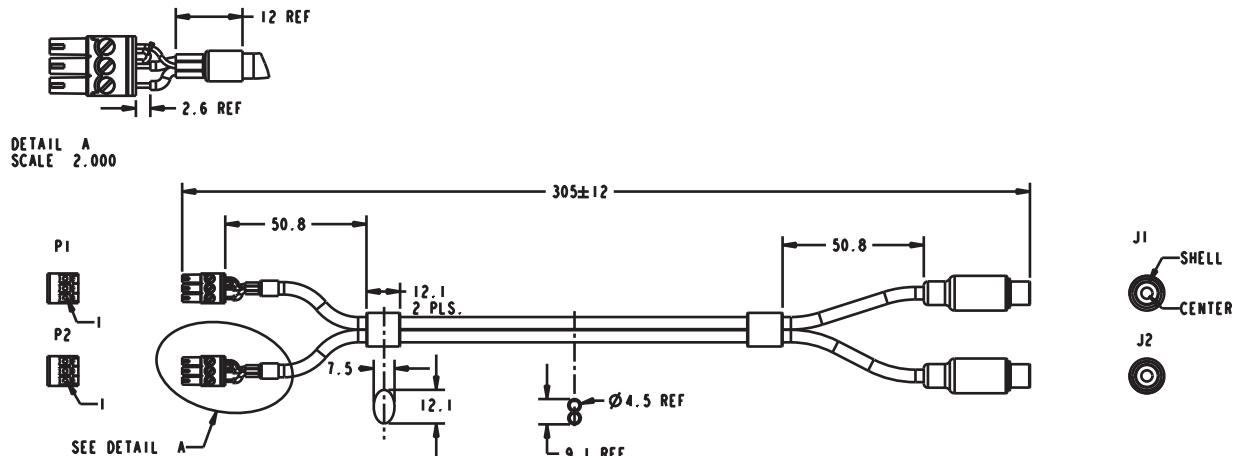

The Polycom RJ-45 connector pinout is custom. For best performance, follow the wiring tables shown in this document. If standard Ethernet cables are used, signal integrity cannot be guaranteed and degraded performance may occur, especially at longer lengths.

Audio Adapter Cable

This cable adapts the Polycom HDX system Phoenix audio connectors to standard RCA audio cables, such as the [Audio Cable](#) on page 2-55. It is dual male Phoenix to dual female RCA connectors (red/white).

Length	Part Number	RoHS Compliant
1 ft (0.3 m)	2457-23492-001	Yes

WIRING LIST

P2	1	B+	CENTER	J2
	2	B-	SHELL	
	3	B DRAIN	—	

INSTALL JUMPER BETWEEN CONTACT 2 AND CONTACT 3 OF BOTH PI & P2 AS SHOWN IN DETAIL "A".

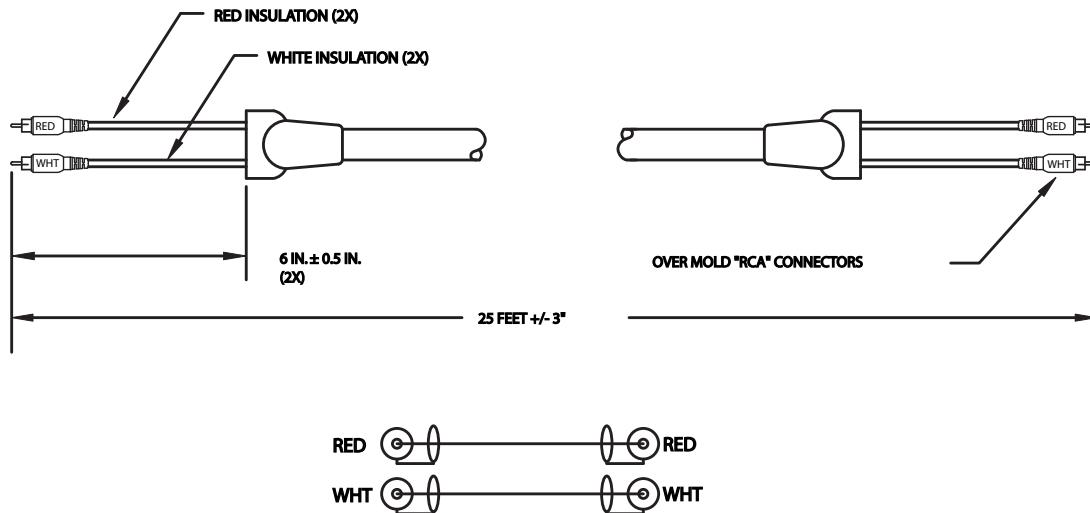

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Audio Cable

This cable connects a Polycom HDX system to an external audio system. It is used with the [Audio Adapter Cable](#) on page 2-54. It has dual RCA connectors (red/white) on both ends. The maximum approved length for this cable is 100 ft (30 m).

Length	Part Number	RoHS Compliant
25 ft (7.6 m)	2457-09212-002	Yes
9 ft 10 in (3 m)	2457-09212-010	Yes

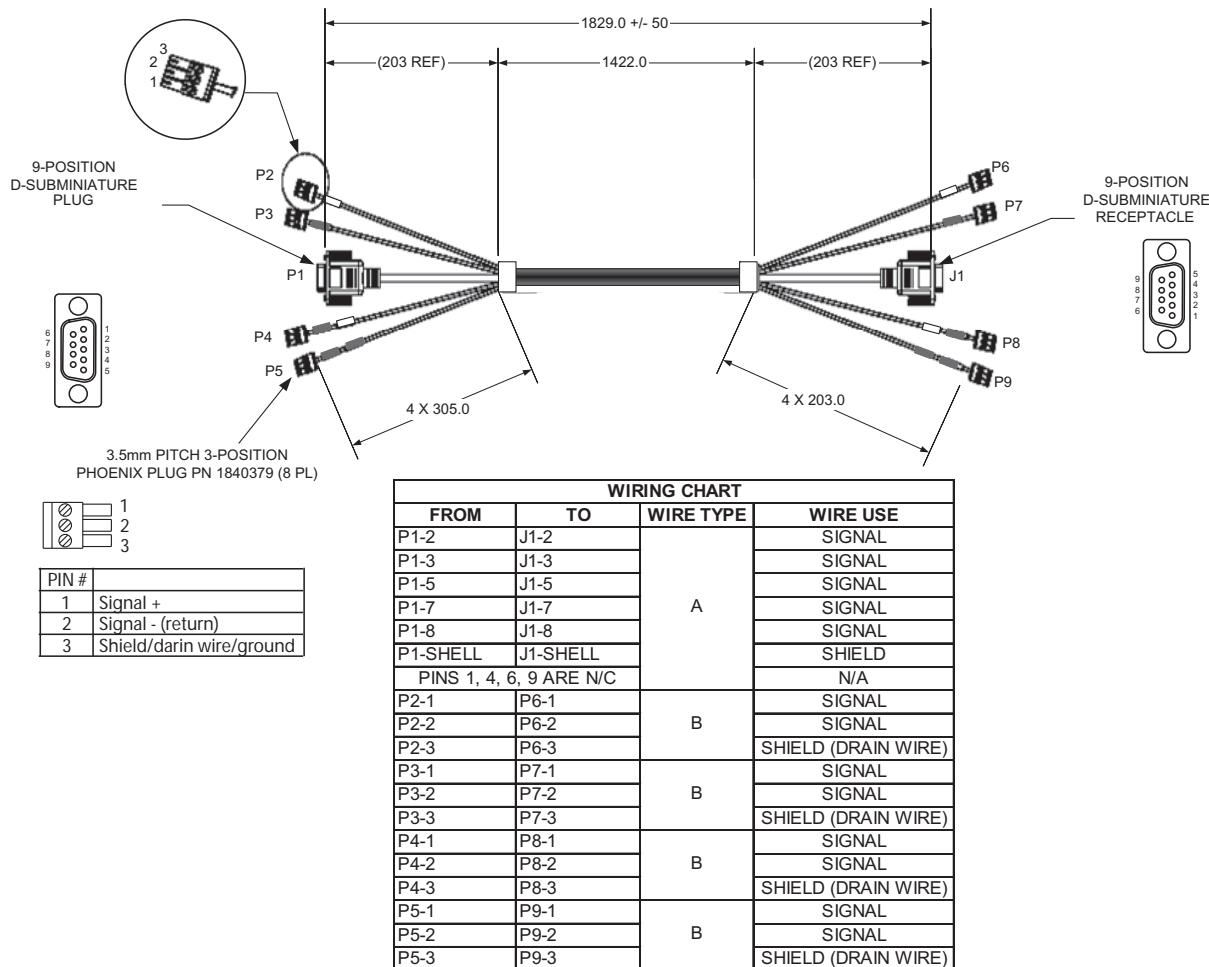

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Vortex Cable

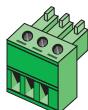

This cable connects a Polycom HDX system to a Polycom Vortex mixer. It has four mini-Phoenix connectors and one DB-9 connector on each end.

Length	Part Number	RoHS Compliant
6 ft (1.8 m)	2457-21978-200	Yes

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

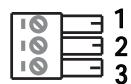

3.5mm Screw Cage Connector

This 3-pin connector connects audio input and output to the Polycom HDX system. It also connects the IR sensor input on a Polycom HDX system to an external IR receiver, such as Xantech models 780-80, 780-90, 480-00, and 490-90.

Length	Part Number	RoHS Compliant
—	1515-41597-001	Yes

Polycom EagleEye Director Audio Feedback Phoenix to Phoenix Cable

This cable connects a Polycom HDX 9000 series system or Polycom SoundStructure C-Series Mixer to the Polycom EagleEye Director camera and the room audio playback system. It is dual male Phoenix connectors (for HDX systems or SoundStructure C-Series Mixer) to dual male Phoenix connectors (for the EagleEye Director camera) with dual female Phoenix connectors (for the room audio playback system).

Length	Part Number	RoHS Compliant
9.10 ft (3 m)	2457-82586-001	Yes

Serial Cables

Straight-Through Serial Cable

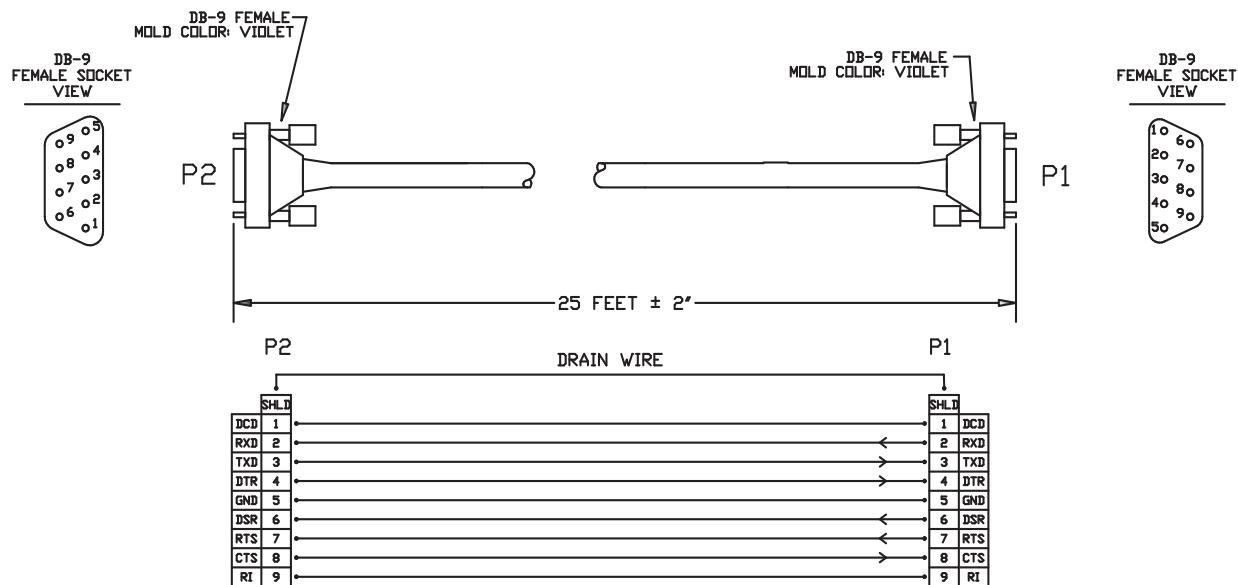

This cable connects a Polycom HDX system to a serial device. It has a DB-9 connector on each end. The maximum approved length for this cable is 100 ft (30 m).

Polycom does not recommend using this straight-through serial cable for RS-232 communication from a computer, Crestron system, or AMX device. Instead, for RS-232 communication, Polycom recommends using a cross-over cable with pin 2 wired to pin 3, pin 3 wired to pin 2, and pin 5 wired to pin 5. The other pins are not used.

If you choose to use this straight-through serial cable for RS-232 communication from a computer or Crestron system, the [Null Modem Adapter](#) on page 2-62 is required. However, the null modem adapter does not work for RS-232 communication from AMX devices and causes problems if you try to use it.

Length	Part Number	RoHS Compliant
25 ft (7.6 m)	2457-09172-001	—

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

The DB-9 male connector on the Polycom HDX system has the following connections.

Pin	Signal
1	Not used
2	Rx
3	Tx
4	DTR (tied to pin 6, DSR)
5	GND
6	DSR (tied to pin 4, DTR)
7	RTS
8	CTS
9	Not used

Most devices that connect to the serial port to control the Polycom HDX system through the API only require pins 2, 3, and 5. For more information and to verify the proper cabling, refer to the documentation for your control system.

Null Modem Adapter

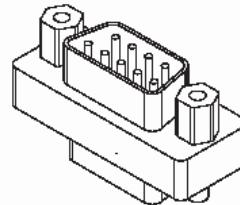

This adapter is used when connecting a Polycom HDX system to a serial device that transmits on pin 3 such as Crestron Pro2 processor. It is a male to female DB-9 adapter plug. This connection may require the [Straight-Through Serial Cable](#) on page [2-60](#).

Do not use this adapter with an AMX device. AMX systems support both RS-232 and RS-422. Therefore, for RS-232 support, use a null modem cross-over cable that carries only pins 2, 3, and 5, with pins 2 and 3 crossed.

Length	Part Number	RoHS Compliant

PIN 8	PIN 7
PIN 9	N/C

Drawings and part numbers are provided for reference only. Polycom claims no responsibility or liability for the quality, performance, or reliability of cables based on these reference drawings, other than cables provided by Polycom. Contact your Polycom distributor or Polycom Custom/Vertical Products to order cables that meet the appropriate manufacturing tolerances, quality, and performance parameters for your application.

Using the API

The Application Programming Interface (API) is a set of commands for advanced users who want to automate a Polycom HDX system. You can use the API by connecting a control system or computer RS-232 serial port to a Polycom HDX 9000, Polycom HDX 8000, or Polycom HDX 7000 series system. You can also use Telnet over the LAN to use the API with Polycom HDX 9000, Polycom HDX 8000, Polycom HDX 7000, and Polycom HDX 6000 series systems.

Using the API with an RS-232 Interface

If you use an RS-232 interface to send API commands, you must connect and configure the control system or computer and the Polycom HDX system for serial communication.

Configuring the RS-232 Interface

If you use the API with a serial connection, make sure that the RS-232 interfaces of the Polycom HDX system and your computer are configured appropriately.

To access the RS-232 settings on your system, do one of the following:

- In the local interface, go to **System > Admin Settings > General Settings > Serial Port**.
- In the web interface, go to **Admin Settings > General Settings > Serial Port**.

Configure the Baud Rate and RS-232 Mode options as follows:

Option	Configure this way on your computer	Configure this way on the Polycom HDX system
Baud Rate	Must be the same rate for both devices. Available rates are: <ul style="list-style-type: none">• 9600• 14400• 19200• 38400• 57600• 115200	
RS-232 Mode	—	Control

The RS-232 port on the Polycom HDX system supports the following modes:

- Camera PTZ
- Closed Caption
- Control
- Pass-Thru
- Vortex Mixer

In Control Mode, a device (for example, a computer) connected to the RS-232 port can control the system using the API.

In Pass-Thru Mode, the operational modes of both devices' RS-232 ports depend on the port configuration of each device.

Starting an API Session using an RS-232 Interface

Polycom HDX 9000, Polycom HDX 8000, and Polycom HDX 7000 series systems can run API sessions from the RS-232 interface.

After you have verified that the Polycom HDX system and your computer or control system are both configured appropriately, set up both devices as follows:

- 1 Power off the computer or control system and the Polycom HDX system.
- 2 Use an RS-232 cable to connect the computer or control system RS-232 port to an RS-232 port on the Polycom HDX system as shown in the following illustrations. This connection may require the [Null Modem Adapter](#) on page 2-62.

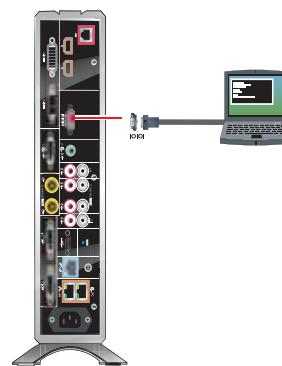

To connect a computer to a Polycom HDX 9006 system:

To connect a computer to a Polycom HDX 9001, Polycom HDX 9002 or Polycom HDX 9004 system:

To connect a computer to a Polycom HDX 8000 or HDX 7000 series system:

- 3** Power on the computer or control system and the Polycom HDX system.
- 4** From the computer or control system, start a serial session using HyperTerminal or another appropriate utility.

Using the API with the Maximum Security Profile Enabled

You must log in with a password to start an RS-232 session if the system is configured with the Security Profile set to Maximum.

You can log in with either the Admin ID and Admin Remote Password or the User ID and User Remote Password of the Polycom HDX system. The availability of individual API commands depends on whether you log in using a User or Admin ID. For a complete list of API commands and parameters available to the user and admin IDs, refer to [Secure RS-232 Interface API Permissions](#) on page [D-1](#).

For more information about the Security Profile, refer to the *Security Deployment Guide for Polycom HDX Systems*.

Using the API with a LAN Connection

If you have a computer connected to the LAN, you can send API commands to the Polycom HDX system through Telnet port 24.

- 1** On the computer, open a command line interface.
- 2** Start a Telnet session using the Polycom HDX system IP address and port number — for example, tel net 10.11.12.13 24.

You cannot use Telnet to access the system if Security Mode is enabled.

Using the API Controller Code

In cooperation with the leading touch panel controller manufacturers, Polycom Video Division is proud to offer its own version of controller code designed to run on Crestron and AMX systems. This independent code base was developed specifically to address issues of code compatibility with video system software releases. It provides a fully executable controller program but also serves as a guideline for ongoing development using Polycom preferred methodology and commands.

To download the API controller code, refer to www.polycom.com/forms/amx_code.html. Additionally, AMX controller code or Crestron controller code is available for controlling the Polycom EagleEye HD camera. Companion documents are also available to further explain how to interface your controller with Polycom video systems and use the API efficiently.

Additional API Resources

The following online resources are available for your reference as you use the API.

Technical Support Contact Information

To contact Polycom Technical Support, go to www.polycom.com/support. This web site provides you with contact information for Polycom technical support. Use this web site when you need help using the API.

Feature Enhancement Request Web Site

Go to www.polycom.com/support, and navigate to **Feature Request**. This web site allows you to submit suggestions for feature enhancements. Use this web site when you have requests for future development of the Polycom API.

Video Test Numbers

Refer to www.polycom.com/videotest. This web site provides you with test numbers of various Polycom systems worldwide. Use this web site when you need to access video test numbers to use when testing your Polycom system.

Knowledge Base

Refer to the Knowledge Base at www.polycom.com/support. This tool allows you to search for user guides, release notes, and other forms of product documentation. You can also search for troubleshooting information and technical briefs. Use this web site when you need to access Polycom product documentation or tips.

System Commands

This chapter describes the API commands for software version 3.0.3.

For an alphabetical list of all the commands, refer to the table of contents for this document. For a list of commands by category, refer to the [Categorical List of API Commands](#) command on page [E-1](#).

About the API Commands

Syntax Conventions

The following conventions are used for the API command descriptions in this chapter. All of the commands are case sensitive.

Convention	Meaning
<param1 param2 param3>	Multiple valid parameters are enclosed in angle brackets and separated by the pipe (" ") character. Example: allowdi aling <yes no get> shows that the allowdi aling command must be followed by one of the parameters listed.
[param] ["param"]	Optional parameters are enclosed in square brackets. Quotation marks indicate strings to be supplied by the user. Example: teleareacode set ["telephone_area_code"] shows that you can supply a value for the area code, or omit it and let the default value apply. You do not need to enclose the actual value in quotes unless it contains a space.
{a..z}	A range of possible alphanumeric values is enclosed in braces. Example: abk letter {a..z} shows that the abk command can be used to return address book entries that begin with an alphanumeric character in the range specified. Example: camera near {1..4} shows that the camera command can be used to select camera 1, 2, 3, or 4 at the near site.
"x"	Quotation marks indicate strings to be supplied by the user. You do not need to enclose the value in quotes unless it contains a space.

Although the API command parser may accept the minimum number of characters in a command that makes it unique, you should always use the full command string.

Availability of Commands

The availability of API commands depends on the type of system, optional equipment installed or connected, security settings and the software version installed on the system. If a particular command is not supported on the system, the command returns feedback such as "error: this command is not supported on this model" or "command is not available in current system configuration". If a setting is configured by a provisioning service, the command may return feedback such as "this setting is

controlled by a provisioning service and cannot be changed". For more information about provisioned settings, refer to your provisioning service administrator.

Deprecated commands are included for backward compatibility only and are not recommended for use with this version. Suitable replacements are noted for each deprecated command.

Commands that are not listed in this chapter are not supported by Polycom. Commands might change or be removed at any time. Polycom discourages integrators from using unpublished commands.

API support is not available for:

- Telnet ports 23 and 24 when Security Mode is enabled.
- Software versions for the Joint Interoperability Test Command (JITC) certification.

Command Response Syntax

When you send a command, the system returns responses using the following syntax, where <CR> indicates a carriage return and <LF> indicates a line feed.

The end of line (EOL) character for the echo is different for serial and LAN responses. The feedback examples below and elsewhere in the Integrator's Reference Manual are based on the serial response.

When Not Registered to Receive Notifications

When your system is not registered to receive any notifications and you send an API command, an API echo and API acknowledgement are returned.

For example:

- camera near 2 <CR>API command
returns
camera near 2<LF><CR>API echo
camera near 2<CR><LF>API acknowledgement

When your system is not registered for notifications, always use the API acknowledgement (<CR><LF>), which indicates that the command was sent, accepted, and processed. Never use the API echo (<LF><CR>), which only indicates that you sent an API command but does not indicate whether the API command you sent was actually processed. For example, you receive an API echo even if you send an invalid API command. In this case, the API echo responds by echoing the invalid API command that you attempted to send.

When Registered to Receive Notifications

Registering for notifications adds extra line responses in the form of API registration responses. When your system is already registered to receive notifications and you send an API command that affects a notification, an API echo, API acknowledgement, and API registration response are returned. You may receive multiple API registration responses if you are registered for multiple notifications that are affected by the API command you are currently sending.

For example, after your system has already been registered to receive camera notifications (the notify vidsourcechanges API command enables these notifications), the following responses are returned when you change the camera source using the camera near 1 API command:

- camera near 1 <CR>API command
returns
camera near 1<LF><CR>API echo
camera near 1<CR><LF>API acknowledgement
notification:vidsourcechange:near:1:Main:people<CR><LF>
API registration response

When your system is registered for notifications, always use the API registration response (<CR><LF>), which indicates that the command was sent, accepted, and processed. Never use the API echo (<LF><CR>), which only indicates that you sent an API command but does not indicate whether the API command you sent was actually processed. For example, you receive an API echo even if you send an invalid API command. In this case, the API echo responds by echoing the invalid API command that you attempted to send.

End Of Line (EOL) Characters When Connected to the API Using a LAN Connection

In software versions prior to 2.5.0.6, the EOL characters for the echo responses on a system connected to the LAN and using a Telnet session were as follows:

camera near 2 <CR> API command
returns
camera near 2<CR><CR><LF> API echo
camera near 2<CR><LF> API acknowledgement

Starting with software version 2.5.0.6, the response changed to a single <CR>; for example:

camera near 2 <CR> API command
returns
camera near 2<CR><LF> API echo
camera near 2<CR><LF> API acknowledgement

The `tel netechoeol` command allows you to change the EOL characters of the API echo to the EOL characters of the serial port echo. See [telnetechoeol](#) on page [4-329](#) for more details.

Commands that Restart the System

Commands that Restart the System with a Prompt

- `reboot`

Commands that Restart the System without a Prompt

- `reboot yes`
- `reboot now`

Additional Tips

- The Polycom HDX system does not provide flow control. If the connection is lost through restarting the system or other means, you must re-establish the connection.
- The API processes one command at a time.
- Polycom does not recommend sending multiple commands simultaneously without a pause or delay between them.
- For commands with a single action and a single response: A delay of 200 milliseconds between commands is usually sufficient. Examples of these commands include the commands for switching cameras (camera near 1), sending content (vcbutton play), and checking the status of the audio mute (mute near get).
- For commands with a single action and a more extensive response: The time required to receive the response, and thus the time between commands, may be longer than 200 milliseconds. The response length, which can vary in size, determines the time required to receive the response. Examples of these commands include the commands for retrieving the local address book (addrbook all), the global address book (gaddrbook all), the list of system settings (displayparams), and system session information (whoami).
- When developing your program, always allow enough time for the response to the requested command to complete before sending another command.
- Do not send any commands while an incoming or outgoing call is being established.
- The API provides feedback status in two ways: registrations or polling.

- It is only required that you send registration and notification API commands once, because the registrations become written into Flash memory and are retained even upon restarting the system.
- Polycom recommends putting registrations in the initialization or startup of Crestron and AMX systems.
- Registrations are recommended over polling since they will provide status updates without having to query for changes.
- Never poll for registrations.
- Registrations are specific to the port from which they are registered. If you register for notifications from com port 1, registration will not be sent to com port 2 or Telnet port 24.

!

Executes a previously used command from the history list, starting with a specific number or letter.

Syntax

```
! "string"
! {1..64}
```

Parameter	Description
"string"	Specifies the most recent command from the history list that begins with this string.
{1..64}	Specifies the Nth command in the history list, where N is 1 through 64.

Feedback Examples

Assume the following command history.

- gatewaynumber set 123456789
returns
gatewaynumber 123456789
- hangup vi deo
returns
hangi ng up vi deo cal l
- hi story
returns
1 gatewaynumber set 123456789
2 hangup vi deo
- h323name get
returns
h323name testip

In this case, each of the following !<letter or number> commands executes the command and prints its output from the history list, as follows.

- !1
returns
gatewaynumber set 123456789
gatewaynumber 123456789
- !2
returns
hangup vi deo
hangi ng up vi deo cal l

- **! h**
returns
h323name get
h323name testip
- **hi story**
returns
1 gatewaynumber set 123456789
2 hangup video
3 h323name get
4 gatewaynumber set 123456789
5 hangup video
6 h323name get

See Also

For information about the history list, refer to [history](#) on page [4-177](#).

abk (deprecated)

Returns local directory (address book) entries. This command has been deprecated. Polycom recommends using the [addrbook](#) command on page [4-12](#).

Syntax

```
abk all
abk batch {0..59}
abk batch search "pattern" "count"
abk batch define "start_no" "stop_no"
abk letter {a..z}
abk range "start_no" "stop_no"
abk refresh
```

Parameter	Description
all	Returns all the entries in the local directory.
batch	Returns a batch of 10 local directory entries. Requires a batch number, which must be an integer in the range {0..59}.
search	Specifies a batch search.
"pattern"	Specifies a pattern to match for the batch search.
"count"	Specifies the number of entries to list that match the pattern.
define	Returns a batch of entries in the range defined by "start_no" to "stop_no."
"start_no"	Specifies the beginning of the range of entries to return.
"stop_no"	Specifies the end of the range of entries to return.
letter	Returns entries beginning with the letter specified from the range {a..z}. Requires one or two alphanumeric characters. Valid characters are: - _ / ; @ , . \ 0 through 9 a through z
range	Returns local directory entries numbered "start_no" through "stop_no". Requires two integers.
refresh	Gets a more current copy of the local directory.

Feedback Examples

- abk all
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - abk 3. Polycom HDX Demo 3 spd: 384 num: 1. 700. 5551213
 - (and so on, until all entries in the local directory are listed, then:)
 - abk all done
- abk batch 0
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - (and so on, through the last entry in the batch of 10 directory entries, such as:)
 - abk 9. Polycom HDX Demo 20 spd: 384 num: 192. 168. 1. 120
 - abk batch 0 done
- abk batch define 0 2
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - abk batch define 0 2 done
- abk batch search Polycom 3
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - abk batch search Polycom 3 done
- abk letter p
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - abk 3. Polycom HDX Demo 3 spd: 384 num: 1. 700. 5551213
 - abk 9. Polycom HDX Demo 20 spd: 384 num: 192. 168. 1. 120
 - abk letter p done
- abk range 0 2
 - returns
 - abk 0. Polycom HDX Demo 1 spd: 384 num: 1. 700. 5551212
 - abk 1. Polycom HDX Demo 2 spd: 384 num: 192. 168. 1. 101
 - abk 2. Polycom HDX Demo 3 spd: 384 num: 192. 168. 1. 102
 - abk range 0 2 done

Comments

Beginning in software version 2.5, entries with multiple addresses (for example, an H.323 address and an ISDN number) return each address type on separate lines with an incremented record number. With previous software versions, entries with multiple addresses return each address type with the same record number.

abk entries are entries stored on the system. gabk entries are entries stored on the GDS. In the user interface, the address book and global address book features are referred to as the *directory* and the *global directory*.

See Also

To return global directory entries, use the [gabk \(deprecated\)](#) command on page [4-136](#).

addrbook

Returns local directory (address book) entries.

Syntax

```
addrbook all
addrbook batch {0..59}
addrbook batch search "pattern" "count"
addrbook batch define "start_no" "stop_no"
addrbook letter {a..z}
addrbook range "start_no" "stop_no"
addrbook refresh
```

Parameter	Description
all	Returns all the entries in the local directory.
batch	Returns a batch of 10 local directory entries. Requires a batch number, which must be an integer in the range {0..59}.
search	Specifies a batch search.
"pattern"	Specifies a pattern to match for the batch search.
"count"	Specifies the number of entries to list that match the pattern.
define	Returns a batch of entries in the range defined by "start_no" to "stop_no."
letter	Returns entries beginning with the letter specified from the range {a..z}. Requires one or two alphanumeric characters. Valid characters are: - _ / ; @ , . \ 0 through 9 a through z
range	Returns local directory entries numbered "start_no" through "stop_no". Requires two integers.
"start_no"	Specifies the beginning of the range of entries to return.
"stop_no"	Specifies the end of the range of entries to return.
refresh	Gets a more current copy of the local directory.

Feedback Examples

- `addrbook all`
returns
`addrbook 0. "Polycom HDX Demo 1" isdn_spd: 384`

- ```
i sdn_num: 1. 700.5551212 i sdn_ext:
addrbook 1. "Polycom HDX Demo 2" h323_spd: 384
h323_num: 192.168.1.101 h323_ext: 7878
addrbook 2. "Polycom HDX Demo 3" sip_spd: 384
sip_num: polycomhdx@polycom.com
addrbook 3. "Polycom HDX Demo 3" phone_num: 1.512.5121212
(and so on, until all entries in the local directory are
listed, then:)
addrbook all done

• addrbook batch 0
returns
addrbook 0. "Polycom HDX Demo 1" i sdn_spd: 384
i sdn_num: 1. 700.5551212 i sdn_ext:
addrbook 1. "Polycom HDX Demo 2" h323_spd: 384
h323_num: 192.168.1.101 h323_ext: 7878
addrbook 2. "Polycom HDX Demo 3" sip_spd: 384
sip_num: polycomhdx@polycom.com
addrbook 3. "Polycom HDX Demo 3" phone_num: 1.512.5121212
(and so on, through the last entry in the batch of 10
directory entries, such as:)
addrbook 9. "Polycom HDX Demo 20" h323_spd: 384
h323_num: 192.168.1.120 h323_ext:
addrbook batch 0 done

• addrbook batch define 0 2
returns
addrbook 0. "Polycom HDX Demo 1" i sdn_spd: 384
i sdn_num: 1. 700.5551212 i sdn_ext:
addrbook 1. "Polycom HDX Demo 2" h323_spd: 384
h323_num: 192.168.1.101 h323_ext: 7878
addrbook 2. "Polycom HDX Demo 3" sip_spd: 384
sip_num: polycomhdx@polycom.com
addrbook batch define 0 2 done
```

## Comments

Beginning in software version 2.5, entries with multiple addresses (for example, an H.323 address and an ISDN number) return each address type on separate lines with an incremented record number. With previous software versions, entries with multiple addresses return each address type with the same record number. addrbook entries are stored in the local directory (address book).

## addressdisplayingab

Specifies whether to display the system address in the global directory.

### Syntax

```
addressdi spl ayedi ngab get
addressdi spl ayedi ngab private
addressdi spl ayedi ngab public
```

| Parameter | Description                                                          |
|-----------|----------------------------------------------------------------------|
| get       | Returns the current setting.                                         |
| private   | Specifies not to display the system address in the global directory. |
| public    | Displays the system address in the global directory.                 |

### Feedback Examples

- addressdi spl ayedi ngab private  
returns  
addressdi spl ayedi ngab private
- addressdi spl ayedi ngab public  
returns  
addressdi spl ayedi ngab public
- addressdi spl ayedi ngab get  
returns  
addressdi spl ayedi ngab public

## advnetstats

Gets advanced network statistics for a call connection.

### Syntax

advnetstats [{0..n}]

| Parameter | Description                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| {0..n}    | <p>Specifies a connection in a multipoint call, where n is the maximum number of connections supported by the system. 0 is call #1, 1 is call #2, 2 is call #3, and so on. Select a number from this range to specify a remote site call for which you want to obtain advanced network statistics.</p> <p>Omit this parameter when retrieving statistics for a point-to-point call.</p> |

### Feedback Examples

- advnetstats 1  
returns

rsid=Remote system id  
ccaps=Content capability, where possible responses include  
"9" (H.239), "E" (enterprise dual streams), "N" (none), and  
"P" (content over the people stream)

## See Also

To return network statistics for a call, use the [netstats](#) command on page [4-249](#).

## alertusertone

Sets or gets the tone used for user alerts.

### Syntax

al ertusertone <get|1|2|3|4>

| Parameter | Description                                    |
|-----------|------------------------------------------------|
| get       | Returns the current setting.                   |
| 1 2 3 4   | Sets the user alert to the corresponding tone. |

### Feedback Examples

- al ertusertone 1  
returns  
al ertusertone 1
- al ertusertone get  
returns  
al ertusertone 1

## alertvideotone

Sets the tone used for incoming video calls.

### Syntax

```
alertvideotone <get|1|2|3|4|5|6|7|8|9|10>
```

| Parameter            | Description                                              |
|----------------------|----------------------------------------------------------|
| get                  | Returns the current setting.                             |
| 1 2 3 4 5 6 7 8 9 10 | Sets the incoming video alert to the corresponding tone. |

### Feedback Examples

- ```
alertvideotone 1
returns
alertvideotone 1
```
- ```
alertvideotone get
returns
alertvideotone 1
```

## all register

Registers for most commonly-used user registration events.

### Syntax

all register

### Feedback Examples

- all register  
returns  
callstate registered  
camera registered  
chaircontrol registered  
linestate registered  
mute registered  
pip registered  
popupinfo registered  
preset registered  
screen registered  
vcbutton registered  
volume registered  
sleep registered

### Comments

Registers changes to any of the following types of parameters:

- Current near-site or far-site source
- State of privacy
- Current volume level
- Active camera presets
- Status of point-to-point or multipoint calls
- Status of physical ISDN/IP connection to codec
- PIP state
- Chair control
- System information

This command is particularly useful when two different control systems are being used simultaneously, such as the web and API commands. The system maintains the registration changes through restarts.

To register for events not included in this feedback, refer to the specific registration command.

This is a one time registration command that is retained in flash memory. Sending the command a second time results in the following feedback response:

- info: event/notification already active: callstate
- info: event/notification already active: camera
- info: event/notification already active: chaircontrol
- info: event/notification already active: chaircontrol
- info: event/notification already active: linestate
- info: event/notification already active: mute
- info: event/notification already active: pip
- info: event/notification already active: pupinfo
- info: event/notification already active: preset
- info: event/notification already active: screen
- info: event/notification already active: vcbutton
- info: event/notification already active: volume
- info: event/notification already active: sleep

The all\_register command does not return local camera movements if the camera is moved using the remote control, the web interface, or the Polycom Touch Control virtual remote.

Polycom recommends you use this command in place of the [registerall \(deprecated\)](#) command on page [4-284](#).

## all unregister

Simultaneously unregisters all registered user feedback so that the API no longer reports changes to the parameters.

### Syntax

```
all unregister
```

### Feedback Examples

- `all unregister`  
returns  
callstate unregistered  
camera unregistered  
chaircontrol unregistered  
linestate unregistered  
chaircontrol unregistered  
mute unregistered  
pip unregistered  
popupinfo unregistered  
preset unregistered  
screen unregistered  
vcbutton unregistered  
volume unregistered  
sleep unregistered

### Comments

The following types of parameters are unregistered:

- Current near-site or far-site source
- State of privacy
- Current volume level
- Active camera presets
- Status of point-to-point or multipoint calls
- Status of physical ISDN/IP connection to codec
- PIP state
- Chair control
- System information

Polycom recommends you use this command in place of the [unregisterall \(deprecated\)](#) command on page [4-333](#).

## allowabkchanges

Sets or gets the Allow Directory Changes setting.

### Syntax

al l owabkchanges <get|yes|no>

| Parameter | Description                                   |
|-----------|-----------------------------------------------|
| get       | Returns the current setting.                  |
| yes       | Enables the Allow Directory Changes setting.  |
| no        | Disables the Allow Directory Changes setting. |

### Feedback Examples

- al l owabkchanges no  
returns  
al l owabkchanges no
- al l owabkchanges yes  
returns  
al l owabkchanges yes
- al l owabkchanges get  
returns  
al l owabkchanges yes

### Comments

If this option is enabled, the user has access to the **New**, **Edit**, and **Delete** operations in the directory.

## allowcamerapresetssetup

Sets or gets whether users are allowed to change camera presets.

### Syntax

al l owcamerapresetssetup <get|yes|no>

| Parameter | Description                                  |
|-----------|----------------------------------------------|
| get       | Returns the current setting.                 |
| yes       | Allows users to change camera presets.       |
| no        | Prevents users from changing camera presets. |

### Feedback Examples

- al l owcamerapresetssetup no  
returns  
al l owcamerapresetssetup no
- al l owcamerapresetssetup yes  
returns  
al l owcamerapresetssetup yes
- al l owcamerapresetssetup get  
returns  
al l owcamerapresetssetup yes

## allowdialing

Sets or gets the ability to dial out from the system.

### Syntax

al l owdi al i ng <get|yes|no>

| Parameter | Description                                                 |
|-----------|-------------------------------------------------------------|
| get       | Returns the current setting.                                |
| yes       | Allows users to place calls.                                |
| no        | Disables dialing so that the system can only receive calls. |

### Feedback Examples

- al l owdi al i ng no  
returns  
al l owdi al i ng no
- al l owdi al i ng yes  
returns  
al l owdi al i ng yes
- al l owdi al i ng get  
returns  
al l owdi al i ng yes

### Comments

al l owdi al i ng no removes the dialing field and marquee text from the Home screen.

## allowmixedcalls

Sets or gets the ability to place and receive mixed protocol multipoint calls (IP and ISDN). It allows the administrator to disable this ability for security reasons.

### Syntax

```
al l owmi xedcal l s <get | yes | no>
```

| Parameter | Description                       |
|-----------|-----------------------------------|
| get       | Returns the current setting.      |
| yes       | Enables mixed IP and ISDN calls.  |
| no        | Disables mixed IP and ISDN calls. |

### Feedback Examples

- al l owmi xedcal l s no  
returns  
al l owmi xedcal l s no
- al l owmi xedcal l s yes  
returns  
al l owmi xedcal l s yes
- al l owmi xedcal l s get  
returns  
al l owmi xedcal l s yes

## allowusersetup

Adds or removes the **User Settings** icon on the System screen, which allows users to access the User Settings screen.

### Syntax

```
al l owusersetup <get|yes|no>
```

| Parameter | Description                      |
|-----------|----------------------------------|
| get       | Returns the current setting.     |
| yes       | Enables the User Settings icon.  |
| no        | Disables the User Settings icon. |

### Feedback Examples

- al l owusersetup no  
returns  
al l owusersetup no
- al l owusersetup yes  
returns  
al l owusersetup yes
- al l owusersetup get  
returns  
al l owusersetup yes

### Comments

This command is useful to prevent users from changing the user settings.

## amxdd

Sets or gets the AMX Device Discovery beacon.

### Syntax

```
amxdd get
amxdd <on|off>
```

| Parameter | Description                                |
|-----------|--------------------------------------------|
| get       | Returns the current setting.               |
| on        | Turns on the AMX Device Discovery beacon.  |
| off       | Turns off the AMX Device Discovery beacon. |

### Feedback Examples

- amxdd get  
returns  
amxdd off
- amxdd on  
returns  
amxdd on

### Comments

The default setting for this signal is "off".

Turning on this command sends out the AMX Device Discovery beacon over the LAN interface. On serial port API sessions, a similar feature is always enabled. This command does not affect that feature on serial port API sessions.

## answer

Answers incoming video or phone calls (analog voice or ISDN voice).

### Syntax

answer <video|phone>

| Parameter | Description                                                                                                      |
|-----------|------------------------------------------------------------------------------------------------------------------|
| video     | Answers incoming video calls when Auto Answer Point-to-Point Video or Auto Answer Multipoint Video is set to No. |
| phone     | Answers incoming analog phone or ISDN voice calls.                                                               |

### Feedback Examples

- answer video  
returns  
answer incoming video call failed
- answer video  
returns  
answer incoming video call passed
- answer phone  
returns  
answer incoming phone call failed
- answer phone  
returns  
answer incoming phone call passed

## areacode

Sets or gets the area code for all ISDN lines. This command is only applicable if you have a network interface connected to your system.

### Syntax

```
areacode get
areacode set "areacode"
```

| Parameter  | Description                                                                                                      |
|------------|------------------------------------------------------------------------------------------------------------------|
| get        | Returns the area code information.                                                                               |
| set        | Sets the ISDN area code when followed by the area code parameter. To erase the current setting, omit "areacode". |
| "areacode" | Area code to use for all lines.                                                                                  |

### Feedback Examples

- areacode set 212  
returns  
areacode 212
- areacode get  
returns  
areacode 212

### Comments

This area code is associated with the area where the system is used.

## audiometer

Queries and displays audio levels, once per second.

### Syntax

```
audiometer
<mi cleft|mi cright|lineinleft|lineinright|lineoutleft|lineoutright|
contentinleft|contentinright|vcrileft|vcriright|vcroutleft|
vcroutright|farendlleft|farendright|off>
```

| Parameter      | Description                                                                                                       |
|----------------|-------------------------------------------------------------------------------------------------------------------|
| mi cleft       | Measures the audio strength of the signal coming from all microphones assigned to the "left" microphone channel.  |
| mi cright      | Measures the audio strength of the signal coming from all microphones assigned to the "right" microphone channel. |
| lineinright    | Measures the audio strength of the signal connected to the right line input port.                                 |
| lineinleft     | Measures the audio strength of the signal connected to the left line input port.                                  |
| lineoutleft    | Measures the audio strength of the signal on the left main audio output port.                                     |
| lineoutright   | Measures the audio strength of the signal on the right main audio output port.                                    |
| contentinleft  | Measures the audio strength of the signal on the left content audio input port.                                   |
| contentinright | Measures the audio strength of the signal on the right content audio input port.                                  |
| vcrileft       | Measures the strength of the signal on the left VCR/DVD audio input port.                                         |
| vcriright      | Measures the strength of the signal on the right VCR/DVD audio input port.                                        |
| vcroutleft     | Measures the strength of the signal on the left VCR/DVD audio output port.                                        |
| vcroutright    | Measures the strength of the signal on the right VCR/DVD audio output port.                                       |

| Parameter   | Description                                                                             |
|-------------|-----------------------------------------------------------------------------------------|
| farendright | Measures the strength of the signal on the right channels of all far-site audio inputs. |
| farendleft  | Measures the strength of the signal on the left channels of all far-site audio inputs.  |
| off         | Turns off audiometer output.                                                            |

## Feedback Examples

- audiometer micleft  
returns  
audiometer micleft level peak: -19  
audiometer micleft level peak: -19  
audiometer micleft level peak: -19  
audiometer micleft level peak: -20  
and so on until you enter  
audiometer off
- audiometer micright  
returns  
audiometer micright level peak: -19  
audiometer micright level peak: -19  
audiometer micright level peak: -19  
audiometer micright level peak: -20  
and so on until you enter  
audiometer off

## Comments

Audio level of a port is measured on the spectrum ranging from -20 dB to +20 dB. Use the audiometer command for a different port to stop monitoring a previous port and to begin monitoring a new port. To turn off monitoring, use audiometer off and watch for the audiometer off acknowledgement or registration response, which confirms that the audiometer monitoring is turned off.

## audiotransmitlevel

Sets or gets the audio volume transmitted to the far site, or notification of transmit level changes.

### Syntax

```
audiotransmitlevel <get|up|down|register|unregister>
audiotransmitlevel set {-20..30}
```

| Parameter  | Description                                                             |
|------------|-------------------------------------------------------------------------|
| get        | Returns the current setting.                                            |
| up         | Sets the volume 1 decibel higher than the current setting.              |
| down       | Sets the volume 1 decibel lower than the current setting.               |
| register   | Registers to receive notification when audio transmit level changes.    |
| unregister | Unregisters to receive notification when audio transmit level changes.  |
| set        | Sets the volume to the specified dB level. Valid values are: {-20..30}. |

### Feedback Examples

- audiotransmitlevel set 2  
returns  
audiotransmitlevel 2
- audiotransmitlevel get  
returns  
audiotransmitlevel 2
- audiotransmitlevel up  
returns  
audiotransmitlevel 3
- audiotransmitlevel down  
returns  
audiotransmitlevel 2
- audiotransmitlevel register  
returns  
audiotransmitlevel registered

- audi otransmi tl evel unregister  
returns  
audi otransmi tl evel unregistered

## autoanswer

Sets or gets the Auto Answer Point-to-Point Video mode, which determines how the system handles an incoming call in a point-to-point video conference.

### Syntax

```
autoanswer <get|yes|no|donotdi sturb>
```

| Parameter     | Description                                                                                                                                                       |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| yes           | Allows any incoming video call to be connected automatically. This is the default setting.                                                                        |
| no            | Prompts the user to answer incoming video calls.                                                                                                                  |
| donotdi sturb | Notifies the user of incoming calls, but does not connect the call. The site that placed the call receives a Far Site Busy (H.320) or Call Rejected (H.323) code. |
| get           | Returns the current setting.                                                                                                                                      |

### Feedback Examples

- autoanswer yes  
returns  
autoanswer yes
- autoanswer no  
returns  
autoanswer no
- autoanswer get  
returns  
autoanswer no
- autoanswer donotdi sturb  
returns  
autoanswer donotdi sturb

### Comments

If autoanswer is set to no or donotdi sturb, you must rely on API session notifications to answer inbound calls.

## autoshowcontent

Specifies whether to send content automatically when a computer is connected to the system.

### Syntax

```
autoshowcontent <get|on|off>
```

| Parameter | Description                                                                               |
|-----------|-------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                              |
| on        | Sets the system to send content automatically when a computer is connected to the system. |
| off       | Sets the system to not send content automatically.                                        |

### Feedback Examples

- autoshowcontent on  
returns  
autoshowcontent on
- autoshowcontent off  
returns  
autoshowcontent off
- autoshowcontent get  
returns  
autoshowcontent off

## backlightcompensation

Sets or gets the Backlight Compensation mode.

### Syntax

`backlightcompensation <get|yes|no>`

| Parameter | Description                                                                               |
|-----------|-------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                              |
| yes       | Enables Backlight Compensation. The camera automatically adjusts for a bright background. |
| no        | Disables the option.                                                                      |

### Feedback Examples

- `backlightcompensation yes`  
returns  
`backlightcompensation yes`
- `backlightcompensation no`  
returns  
`backlightcompensation no`
- `backlightcompensation get`  
returns  
`backlightcompensation no`

## basicmode

Sets or gets the Basic Mode configuration, a limited operating mode that uses H.261 for video and G.711 for audio. Basic mode provides administrators with a workaround for interoperability issues that cannot be solved using other methods.

### Syntax

```
basicmode <get|on|off>
```

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| on        | Enables basic mode.          |
| off       | Disables basic mode.         |

### Feedback Examples

- basicmode on  
returns  
basicmode on
- basicmode off  
returns  
basicmode off
- basicmode get  
returns  
basicmode off

## bri1enable, bri2enable, bri3enable, bri4enable

Sets or gets the configuration of the specified ISDN BRI line. This command is only applicable if you have a BRI network interface connected to your system.

### Syntax

```
bri 1enable <get|yes|no>
bri 2enable <get|yes|no>
bri 3enable <get|yes|no>
bri 4enable <get|yes|no>
```

| Parameter | Description                                                        |
|-----------|--------------------------------------------------------------------|
| get       | Returns the status of the BRI line—yes if enabled, no if disabled. |
| yes       | Enables the BRI line.                                              |
| no        | Disables the BRI line.                                             |

### Feedback Examples

- bri 1enable yes  
returns  
bri 1enable yes
- bri 1enable no  
returns  
bri 1enable no
- bri 1enable get  
returns  
bri 1enable no

## briallenable

Sets or gets the configuration of all ISDN BRI lines. This command is only applicable if you have a BRI network interface connected to your system.

### Syntax

`bri allenable <get|yes|no>`

| Parameter | Description                                                         |
|-----------|---------------------------------------------------------------------|
| get       | Returns the status of all BRI lines—yes if enabled, no if disabled. |
| yes       | Enables all BRI lines.                                              |
| no        | Disables all BRI lines.                                             |

### Feedback Examples

- `bri allenable yes`  
returns  
`bri 1enabl e yes`  
`bri 2enabl e yes`  
`bri 3enabl e yes`  
`bri 4enabl e yes`
- `bri allenable no`  
returns  
`bri 1enabl e no`  
`bri 2enabl e no`  
`bri 3enabl e no`  
`bri 4enabl e no`
- `bri allenable get`  
returns  
`bri 1enabl e no`  
`bri 2enabl e no`  
`bri 3enabl e no`  
`bri 4enabl e no`

### Comments

`bri allenable yes` only enables lines where the directory numbers have been populated.

## button

Simulates Polycom remote control buttons.

### Syntax

```
button <#|*|0|1|2|3|4|5|6|7|8|9|.>
button <down|left|right|select|up>
button <auto|back|call|far|graphics|hangup|near>
button <help|mute|volume+|volume-|lowbattery|zoom+|zoom->
button <checkedup|putdown>
button <camera|delete|directory|home|keyboard|period|pip|preset>
button <info|menu|slides|option>
button "valid_button" ["valid_button" ...]
button <mmstop|mmpause|mmrecord|mmforward|mmrewind>
```

| Parameter            | Description                                                          |
|----------------------|----------------------------------------------------------------------|
| .                    | Types a period (dot) if the cursor is on a text field.               |
| #                    | Sends the # button signal to the user interface.                     |
| *                    | Sends the * button signal to the user interface.                     |
| ["valid_button" ...] | Sends one or more remote control button signals.                     |
| 0 1 2 3 4 5 6 7 8 9  | Sends the corresponding numeric button signal to the user interface. |
| auto                 | Sends the Auto button signal to the user interface.                  |
| back                 | Simulates the Back button on multiple-page screens.                  |
| call                 | Sends the Call button signal to the user interface.                  |
| camera               | Sends the Camera button signal to the user interface.                |
| delete               | Sends the Delete button signal to the user interface.                |
| directory            | Sends the Directory button signal to the user interface.             |
| down                 | Sends the down arrow button signal to the user interface.            |
| far                  | Sends the Far button signal to the user interface.                   |
| graphics             | Sends the Content button signal to the user interface.               |
| hangup               | Sends the Hang Up button signal to the user interface.               |
| help                 | Sends the Help button signal to the user interface.                  |
| home                 | Sends the Home button signal to the user interface.                  |
| info                 | Sends the Info button signal to the user interface.                  |

| Parameter  | Description                                                                                                                  |
|------------|------------------------------------------------------------------------------------------------------------------------------|
| keyboard   | Brings up the on-screen keyboard if the cursor is on a text field.                                                           |
| left       | Sends the left arrow button signal to the user interface.                                                                    |
| lowbattery | Simulates a low battery alert for the remote control.                                                                        |
| menu       | Sends the <b>Menu</b> button signal to legacy systems. Deprecated. Polycom recommends using back instead of this button.     |
| mmstop     | Stops the video stream on the RSS-4000™.                                                                                     |
| mmplay     | Plays the video stream on the RSS-4000.                                                                                      |
| mmpause    | Pauses the video stream on the RSS-4000.                                                                                     |
| mmrecord   | Records the video stream on the RSS-4000.                                                                                    |
| mmforward  | Fast forwards the video stream on the RSS-4000.                                                                              |
| mmrewind   | Rewinds the video stream on the RSS-4000.                                                                                    |
| mute       | Sends the <b>Mute</b> button signal to the user interface, causing a toggle of mute state.                                   |
| near       | Sends the <b>Near</b> button signal to the user interface.                                                                   |
| option     | Sends the <b>Option</b> button signal to the user interface.                                                                 |
| period     | Types a period (dot) if the cursor is on a text field.                                                                       |
| pickedup   | Sends a signal indicating that the remote control has been picked up.                                                        |
| pip        | Sends the <b>Display</b> button signal to the user interface.                                                                |
| preset     | Sends the <b>Preset</b> button signal to the user interface.                                                                 |
| putdown    | Sends a signal indicating that the remote control has been set down.                                                         |
| right      | Sends the right arrow button signal to the user interface.                                                                   |
| select     | Sends the <b>Select</b> (center button) button signal to the user interface.                                                 |
| slides     | Sends the <b>Slides</b> button signal to legacy systems. Deprecated. Polycom recommends using graphs instead of this button. |
| up         | Sends the up arrow button signal to the user interface.                                                                      |
| volume-    | Sends the volume - button signal to the user interface.                                                                      |

| Parameter | Description                                             |
|-----------|---------------------------------------------------------|
| volume+   | Sends the volume + button signal to the user interface. |
| zoom-     | Sends the zoom - button signal to the user interface.   |
| zoom+     | Sends the zoom +button signal to the user interface.    |

## Feedback Examples

- button up  
sends the up arrow command to the user interface and returns  
button up
- button near left right call  
is valid, sends the near, left arrow, right arrow, and call commands to the user interface, and returns  
button near  
button left  
button right  
button call
- button mmstop  
returns  
button mmstop
- button mmplay  
returns  
button mmplay

The command checks for invalid input and reports button responses as they are processed. One of three status values is returned when the command is issued for multiple buttons:

- succeeded—all buttons are valid
- failed—all input is invalid and none can perform a valid action
- completed—some are invalid, and responses specify each as valid or invalid

For example:

- button camera right center select  
returns  
button camera  
button right  
error: button center not a recognized command  
button select  
button completed

Long button command sequences will complete before a second command is considered. Feedback for button command sequences that include multiple buttons show only the first button name.

## Comments

Several parameters can be combined in the same command in any order.

The button commands are not recommended. When possible, use another API command instead of the button commands, which rely on the current organization of the user interface.

Use button `pi p` to send the **Display** button signal to the user interface.

Feedback responses from RSS-2000 parameters are not from the RSS-2000 and are not an indication that you are in control of the RSS-2000. You can issue the commands when you are not connected to the RSS-2000 and still receive feedback.

## calendardomain

Gets and sets the domain used by the calendaring service to log in to the Microsoft® Exchange server.

### Syntax

```
cal endardomai n get
cal endardomai n "domai n"
```

| Parameter | Description                                         |
|-----------|-----------------------------------------------------|
| get       | Returns the domain used by the calendaring service. |
| "domai n" | The domain to be used by the calendaring service.   |

### Feedback Examples

- cal endardomai n get  
returns  
cal endardomai n smi thfi el d
- cal endardomai n fai rvi ew  
returns  
cal endardomai n fai rvi ew

## calendarmeetings

Retrieves scheduled meetings within the given time span or with the given meeting ID.

### Syntax

```
calendarmeetings list "starttime" ["endtime"]
calendarmeetings info "meetingid"
```

| Parameter   | Description                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| list        | Returns the meeting id or ids for meetings that start at or after the specified start time and end time.                                                                                                                                                                                                                                                                             |
| "starttime" | <p>The start time of meetings to be retrieved.<br/> The start time can be entered in one of the following formats:</p> <ul style="list-style-type: none"> <li>• YYYY-MM-DD:HH:MM</li> <li>• today:HH:MM</li> <li>• today</li> <li>• tomorrow:HH:MM</li> <li>• tomorrow</li> </ul> <p>The times are interpreted to be local times in the time zone the system was configured for.</p> |
| "endtime"   | <p>The end time of meetings to be retrieved.<br/> This parameter can be given in the following format.</p> <ul style="list-style-type: none"> <li>• YYYY-MM-DD:HH:MM</li> <li>• today:HH:MM</li> <li>• today</li> <li>• tomorrow:HH:MM</li> <li>• tomorrow</li> </ul> <p>The times are interpreted to be local times in the time zone the system was configured for.</p>             |
| info        | Retrieves meeting details for scheduled meetings when the Polycom HDX system is registered with the calendaring service. Returns information such as the location, subject and organizer of the meeting.                                                                                                                                                                             |
| "meetingid" | The ID of the meeting for which you want to find details.                                                                                                                                                                                                                                                                                                                            |

## Comments

If the meeting's end time is more than 31 days from the meeting's start time, the response is shortened to `starttime+31days`, and meetings that start in that time span are returned.

If an API client is logged in with user-level credentials and if the Polycom HDX system is configured to hide private meeting information on the web interface, the API hides the information from the API client and shows the subject of the meeting as "Private Meeting"; for example:

```
cal endarmetings list begin
meeting|AAAAaAEFsZXguTWFj RG9uYWxkQHBvbHI j b20uY29tAVEACI j Mn4AUcVg
ARgAAAADr9GI hsSj WEZBcAAKzMphJBwA4wi cbtr3UEZArAKAk09LtaAACZpKWAA
De7hJI eQI OS7j 2mzRJxKLKAAA30GwAAAQ|2009-09-25: 08: 30|2009-09-25: 09:
15|private meeting
cal endarmetings list end
```

If a Polycom HDX system is configured to provide private meeting information on the web interface, the API provides the same information to the API client; for example:

```
cal endarmetings list begin
meeting|AAAZAGV4Y2H1C2VYMDFACJEZLNZZY5SB2NHBDI ARGAAAAAAKQKC8WW
3CUWGCPM+AP66WQCASOLXUYMOMEKYBQJJ1ZOMBWASDQANHQAAASOLXUYMOMEKYBQ
JJ1ZOMBWASDQASVGAA|2009-09-25: 08: 30|2009-09-25: 09: 15| Demo
cal endarmetings list end
```

If the API client is logged in with admin-level credentials, the API provides private meeting information to the API client, regardless of the HDX configuration for displaying private meeting information; for example:

```
cal endarmetings list begin
meeting|AAAZAGV4Y2H1C2VYMDFACJEZLNZZY5SB2NHBDI ARGAAAAAAKQKC8WW
3CUWGCPM+AP66WQCASOLXUYMOMEKYBQJJ1ZOMBWASDQANHQAAASOLXUYMOMEKYBQ
JJ1ZOMBWASDQASVGAA|2009-09-25: 08: 30|2009-09-25: 09: 15| Release plan
meeting|AAAZAGV4Y2H1C2VYMDFACJEZLNZZY5SB2NHBDI ARGAAAAAAKQKC8WW
3CUWGCPM+AP66WQCASOLXUYMOMEKYBQJJ1ZOMBWASDQANHQAAASOLXUYMOMEKYBQ
JJ1ZOMBWASDQASVGAA|2009-09-23: 11: 00|2009-09-23: 11: 45| Product roadmap
for 2010
cal endarmetings list end
```

The calendaring service must be registered with Microsoft Exchange server for the `calendarmetings` command to work successfully. If the calendar credentials are invalid, the server address is not valid, or the configured user credentials don't have access permissions to the resource mailbox calendar, the service will fail to register.

This command has multi line output.

The following characters in the meeting subject will not be displayed:

- | (vertical bar)
- CR (carriage return)
- LF (line feed)

## See Also

To enable or disable the calendaring service, use the [calendarregisterwithserver](#) command on page [4-52](#). To configure the Microsoft Exchange server address used by this service use the [calendarserver](#) command on page [4-55](#).

## calendarpassword

Sets the password used by the calendaring service to log in to the Microsoft Exchange server.

### Syntax

```
cal endarpassword "password"
```

| Parameter  | Description                                                                              |
|------------|------------------------------------------------------------------------------------------|
| "password" | The password used by the calendaring service to log in to the Microsoft Exchange server. |

### Feedback Examples

```
cal endarpassword Dsca1end@r
returns
cal endarpassword Dsca1end@r
```

### Comments

The password can be up to 15 characters long and is case-sensitive. Use strong passwords that combine uppercase and lowercase letters, numbers, and symbols.

### See Also

To enable or disable the calendaring service, use the [calendarregisterwithserver](#) command on page [4-52](#).

## calendarplaytone

Enables or disables the reminder alert tone that plays with the meeting reminder when the Polycom HDX system is registered with the calendaring service.

### Syntax

```
cal endarpl aytone get
cal endarpl aytone <yes|no>
```

| Parameter | Description                                  |
|-----------|----------------------------------------------|
| get       | Gets the current setting for the alert tone. |
| yes       | Enables the alert tone.                      |
| no        | Disables the alert tone.                     |

### Feedback Examples

- cal endarpl aytone get  
returns  
cal endarpl aytone yes
- cal endarpl aytone yes  
returns  
cal endarpl aytone yes
- cal endarpl aytone no  
returns  
cal endarpl aytone no

### See Also

See [calendarremindertime](#) command on page 4-53.

## calendarregisterwithserver

Enables or disables the calendaring service.

### Syntax

```
cal endarregisterwithserver get
cal endarregisterwithserver <yes|no>
```

| Parameter | Description                                     |
|-----------|-------------------------------------------------|
| get       | Returns the current server registration status. |
| yes       | Enables the calendaring service.                |
| no        | Disables the calendaring service.               |

### Feedback Examples

- cal endarregisterwithserver get  
returns  
cal endarregisterwithserver no
- cal endarregisterwithserver yes  
returns  
cal endarregisterwithserver yes
- cal endarregisterwithserver no  
returns  
cal endarregisterwithserver no

### Comments

To configure the Microsoft Exchange server address used by the calendaring service use the [calendarserver](#) command on page [4-55](#).

## calendarremindertime

Gets and sets the reminder time for meetings in the calendar when the system is registered with the calendaring service.

### Syntax

```
cal endarremindertime <get|1|5|10|15|30|none>
```

| Parameter         | Description                                                                     |
|-------------------|---------------------------------------------------------------------------------|
| get               | Gets the current reminder time.                                                 |
| 1 5 10 15 30 none | The number of minutes before a meeting starts that a meeting reminder is given. |

### Feedback Examples

- cal endarremindertime get  
returns  
cal endarremindertime 5
- cal endarremindertime 15  
returns  
cal endarremindertime 15
- cal endarremindertime none  
returns  
cal endarremindertime none

### Comments

By default, the reminder time is set to 5 minutes.

### See Also

Use the [notify](#) command on page [4-251](#) to register for meeting reminders.

See also [calendarplaytone](#) command on page [4-51](#).

## calendarresource

Gets and sets the mailbox account being monitored for calendar events. The mailbox account is called a resource.

### Syntax

```
cal endarresource get
cal endarresource "resource"
```

| Parameter  | Description                                               |
|------------|-----------------------------------------------------------|
| get        | Returns the resource being monitored for calendar events. |
| "resource" | The resource to monitor for calendaring events.           |

### Feedback Examples

- cal endarresource get  
returns  
cal endarresource rada@abcde.com
- cal endarresource j mcnul ty@abcde.com  
returns  
cal endarresource j mcnul ty@abcde.com

### Comments

A resource can be a user mailbox or a resource mailbox. A resource mailbox is a mailbox specifically assigned to a meeting room.

### See Also

Use the [calendarregisterwithserver](#) command on page 4-52 to enable or disable the calendaring service. See the [calendarserver](#) command on page 4-55 to configure the Microsoft Exchange server address used by the calendaring service.

## calendarserver

Gets or sets the Microsoft Exchange server used by the calendaring service.

### Syntax

```
cal endarserver get
cal endarserver "server"
```

| Parameter | Description                                                                                        |
|-----------|----------------------------------------------------------------------------------------------------|
| get       | Gets the current Microsoft Exchange server used by the calendaring service.                        |
| "server"  | The IP address or DNS name of the Microsoft Exchange server to be used by the calendaring service. |

### Feedback Examples

- cal endarserver get  
returns  
cal endarserver 192.168.44.168
- cal endarserver 192.168.23.221  
returns  
cal endarserver 192.168.23.221
- cal endarserver get  
returns  
cal endarserver mail.exchangeserver.local.com
- cal endarserver mail2.exchserver.local.com  
returns  
cal endarserver mail2.exchserver.local.com

### See Also

Use the [calendarregisterwithserver](#) command on page 4-52 to enable or disable the calendaring service.

## calendarshowpvtmeetings

Enables or disables the display of private meetings in the calendar when the system is registered with the calendaring service.

### Syntax

```
calendarshowpvtmeetings get
calendarshowpvtmeetings <yes|no>
```

| Parameter | Description                                           |
|-----------|-------------------------------------------------------|
| get       | Gets the current setting for private meeting display. |
| yes       | Enables the display of private meetings.              |
| no        | Blocks the display of private meetings.               |

### Feedback Examples

- calendarshowpvtmeetings get  
returns  
calendarshowpvtmeetings no
- calendarshowpvtmeetings yes  
returns  
calendarshowpvtmeetings yes
- calendarshowpvtmeetings no  
returns  
calendarshowpvtmeetings no

## calendarstatus

Returns the status of the Microsoft Exchange server connection.

### Syntax

```
cal endarstatus get
```

| Parameter | Description                                              |
|-----------|----------------------------------------------------------|
| get       | Returns the Microsoft Exchange server connection status. |

### Feedback Examples

- cal endarstatus get  
returns  
cal endarstatus establ i shed
- cal endarstatus get  
returns  
cal endarstatus unavai l abl e

### See Also

Use the [calendarregisterwithserver](#) command on page 4-52 to enable or disable the calendaring service.

## calendaruser

Gets or sets the user name the calendaring service uses to log in to the Microsoft Exchange server.

### Syntax

```
cal endaruser get
cal endaruser "username"
```

| Parameter | Description                                                                            |
|-----------|----------------------------------------------------------------------------------------|
| get       | Returns the user name being used by the calendaring service.                           |
| username  | The user name the calendaring service uses to log in to the Microsoft Exchange server. |

### Feedback Examples

- cal endaruser get  
returns  
cal endaruser j pol ycom

### See Also

See the [calendarserver](#) command on page 4-55 to configure the Microsoft Exchange server address used by this service.

call detail

Displays all call detail records, a specific call detail record, or the call detail range.

# Syntax

```
call detail <"Nth_item" | all>
call detail range
```

| Parameter  | Description                                              |
|------------|----------------------------------------------------------|
| "Nth_item" | Displays the Nth call detail record.                     |
| all        | Displays all call detail records.                        |
| range      | Displays the range of records in the call detail report. |

## Feedback Examples

## calldetailreport

Sets or gets whether to generate a report of all calls made with the system.

### Syntax

```
cal|detail|report <get|yes|no>
```

| Parameter | Description                      |
|-----------|----------------------------------|
| get       | Returns the current setting.     |
| yes       | Turns on call detail reporting.  |
| no        | Turns off call detail reporting. |

### Feedback Examples

- cal|detail|report yes  
returns  
cal|detail|report yes
- cal|detail|report no  
returns  
cal|detail|report no
- cal|detail|report get  
returns  
cal|detail|report no

### Comments

cal|detail|no disables both the Call Detail Report and Recent Calls features.

## callinfo

Returns information about the current call. If you are in a multipoint call, this command returns one line for each site in the call.

### Syntax

```
callinfo all
callinfo callid "callid"
```

| Parameter | Description                                                          |
|-----------|----------------------------------------------------------------------|
| all       | Returns information about each connection in the call.               |
| callid    | Returns information about the connection with the specified call ID. |

### Feedback Examples

- **callinfo all**  
returns  
callinfo begin  
callinfo: 43: Polycom HDX Demo: 192.168.1.101: 384: connected:  
not muted: outgoing: videoocal  
callinfo: 36: 192.168.1.102: 256: connected: muted: outgoing: videoocal  
callinfo end
- **callinfo callid 36**  
returns  
callinfo: 36: 192.168.1.102: 256: connected: muted: outgoing: videoocal
- **callinfo all**  
returns  
system is not in a call  
when no call is currently connected

### Comments

The callid information is returned using the following format:

```
callinfo: <callid>: <far site name>: <far site number>: <speed>:
<connection status>: <mute status>: <call direction>: <call type>
```

## callstate

Sets or gets the call state notification for call state events.

### Syntax

```
callstate <get|register|unregister>
```

| Parameter  | Description                                                   |
|------------|---------------------------------------------------------------|
| get        | Returns the current setting.                                  |
| register   | Registers the system to give notification of call activities. |
| unregister | Disables the register mode.                                   |

### Feedback Examples

- callstate register  
returns  
callstate registered
- callstate unregister  
returns  
callstate unregistered
- callstate get  
returns  
callstate unregistered

After registering, the following callstate (cs:) data is returned when connecting an IP call:

```
cs: call [34] chan[0] dialstr[192.168.1.103] state[ALLOCATED]
cs: call [34] chan[0] dialstr[192.168.1.103] state[RINGING]
cs: call [34] chan[0] dialstr[192.168.1.103] state[BONDING]
cs: call [34] chan[0] dialstr[192.168.1.103] state[BONDING]
cs: call [34] chan[0] dialstr[192.168.1.103] state[COMPLETE]
active: call [34] speed [384]
```

Note: The [BONDING] responses in IP calls are extraneous text that will be removed in a subsequent software version.

After registering, the following response occurs when disconnecting an IP call:

```
cleared: call [34]
dialstr[IP: 192.168.1.103 NAME: Polycom HDX Demo]
ended: call [34]
```

## See Also

You can also use the [notify](#) command on page [4-251](#) and the [nonotify](#) command on page [4-250](#) for notifications.

For more information about call status messages, refer to [Status Messages](#) command on page [B-1](#).

## callstats

Returns call summary information.

### Syntax

callstats

### Feedback Examples

- callstats  
returns  
timeinlastcall 0:02:35  
total numberofcalls 23  
total numberofpcalls 23  
total timeonpcalls 2:08:44  
percentageonpcalls 100%  
total numberofsdnccalls 0  
total timeonsdnccalls 00:00:00  
percentageonsdnccalls 0%

## camera

Sets or gets the near-site or far-site camera settings.

### Syntax

```

camera near {1..6}
camera far {1..5}
camera <near|far> move <left|right|up|down|zoom+|zoom-|stop>
camera <near|far> move <continuous|discrete>
camera <near|far> source
camera <near|far> stop
camera near <getposition|setposition "x" "y" "z">
camera near ppcip
camera near tracking statistics

| Parameter      | Description                                                                                                                                                                                  |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| near           | Specifies that the command selects or controls the near camera.                                                                                                                              |
| far            | Specifies that the command selects or controls the far camera.                                                                                                                               |
| {1..6}, {1..5} | Specifies a near or far camera as the main video source. camera near 6 selects Polycom People+Content™ IP if it is running and connected to the system.                                      |
| move           | Changes the near or far camera's direction or zoom. Only continuous and discrete return feedback. Valid directions are: left, right, up, down, zoom+, zoom-, stop, continuous, and discrete. |
| left           | Starts moving the camera left.                                                                                                                                                               |
| right          | Starts moving the camera right.                                                                                                                                                              |
| up             | Starts moving the camera up.                                                                                                                                                                 |
| down           | Starts moving the camera down.                                                                                                                                                               |
| zoom+          | Starts zooming in.                                                                                                                                                                           |
| zoom-          | Starts zooming out.                                                                                                                                                                          |
| stop           | Stops the near or far camera when in continuous mode. Returns no feedback.                                                                                                                   |

| Parameter               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| continuous              | Selects continuous movement mode. The camera moves in direction specified until a camera <near far> move stop command is sent. This is the default setting.                                                                                                                                                                                                                                                                                                                            |
| discrete                | Selects discrete movement mode. The camera moves a small amount in the direction specified and then stop. No stop command is required.                                                                                                                                                                                                                                                                                                                                                 |
| source                  | Returns the number of the near or far camera source currently selected.                                                                                                                                                                                                                                                                                                                                                                                                                |
| getposition             | Gets the pan, tilt, and zoom coordinates of the currently selected PTZ camera in the format of pan tilt zoom.                                                                                                                                                                                                                                                                                                                                                                          |
| setposition "x" "y" "z" | Sets the pan (x), tilt (y), and zoom (z) coordinates of the currently selected PTZ camera. Camera PTZ range:<br>-880 <= pan <= 880<br>-300 <= tilt <= 300<br>0 <= zoom <= 1023<br><b>Notes:</b><br>The camera PTZ range applies to the Polycom EagleEye HD camera. Different cameras might have different PTZ values.<br>Some D30 cameras might not be able to reach the designed range limit. For example, although the pan limit is 880, the camera might only be able to reach 860. |
| ppcip                   | Specifies People+Content IP as the main video source if it is running and connected to the system.                                                                                                                                                                                                                                                                                                                                                                                     |
| for-people {2..5}       | Sets the source for the specified camera to People.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| for-content {2..5}      | Sets the source for the specified camera to Content.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| list-content            | Gets a list of cameras configured as Content.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| register                | Registers to receive feedback when the user changes the camera source. Returns the current camera registration state when followed by the get parameter.                                                                                                                                                                                                                                                                                                                               |

| Parameter             | Description                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| unregister            | Unregisters to receive feedback when the user changes the camera source.                                                                                                                                                                                                                                                                                                                                            |
| tracking statistics   | Gets EagleEye Director tracking statistics. Tracking statistics measure: <ul style="list-style-type: none"> <li>the amount of time tracking is turned off divided by the total call time in the most recent 100 calls lasting more than five minutes.</li> <li>the amount of room and close-up view switches divided by the total call time in the most recent 100 calls lasting more than five minutes.</li> </ul> |
| tracking <get on off> | Enables or disables the Polycom EagleEye Director tracking feature. on turns the tracking feature on, off turns the tracking feature off, and get returns the current tracking feature setting.                                                                                                                                                                                                                     |

## Feedback Examples

- camera far 2  
specifies camera 2 at the far-site and returns  
camera far 2
- camera far move left  
causes the far-site camera to start panning to the left and returns  
event: camera far move left
- camera near move zoom+  
causes the near-site camera to zoom in and returns  
event: camera near move zoom+
- camera register  
returns  
camera registered
- camera unregister  
returns  
camera unregistered
- camera near tracking statistics  
returns  
EagleEye Director Tracking Statistics begin  
Tracking Disable Percentage: 3%  
View Switching Frequency (Per Hour): 50  
EagleEye Director Tracking Statistics end
- camera near tracking off  
returns  
camera near tracking off

- camera near tracking on  
returns  
camera near tracking on
- camera near tracking get  
returns  
camera near tracking Voice

### Comments

If the camera near {1..6} API command is used for an input configured as content, the command becomes a toggle. You must send the command once to send the content source and a second time to stop the content source. The camera near 6 command and the camera near ppcip command provide the same functionality.

The camera register command does not return local camera movements if the camera is moved using the remote control or the web interface.

## cameradirection

Sets or gets the camera pan direction.

### Syntax

cameradirection <get|normal|reversed>

| Parameter | Description                                                                                                                                  |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                                                 |
| normal    | Sets the direction of the camera to normal; the camera moves in the same direction as the left and right arrows on the remote control.       |
| reversed  | Sets the direction of the camera to reversed; the camera moves in the opposite direction of the left and right arrows on the remote control. |

### Feedback Examples

- cameradirection normal  
returns  
cameradirection normal
- cameradirection reversed  
returns  
cameradirection reversed
- cameradirection get  
returns  
cameradirection reversed

## camerainput

Sets or gets the format for a video source.

### Syntax

```
camerainput <1|2|3> <get|s-video|composite|component>
camerainput <4|5> <get|dvi |vga>
```

| Parameter | Description                                                                          |
|-----------|--------------------------------------------------------------------------------------|
| <1..5>    | Specifies the video source. camerainput 5 is available only on the Polycom HDX 9004. |
| get       | Returns the current setting.                                                         |
| s-video   | Specifies that the video source is connected using S-Video.                          |
| composite | Specifies that the video source is connected using a composite connector.            |
| component | Specifies that the video source is connected using a component connector.            |
| dvi       | Specifies that the video source is connected using DVI.                              |
| vga       | Specifies that the video source is connected using VGA.                              |

### Feedback Examples

- camerainput 1 composite  
returns  
camerainput 1 component
- camerainput 2 s-video  
returns  
camerainput 2 s-video
- camerainput 2 get  
returns  
camerainput 2 s-video
- camerainput 3 dvi  
returns  
camerainput 3 dvi
- camerainput 4 vga  
returns  
camerainput 4 vga

## chaircontrol

Sends various chair control commands while the system is in a multipoint call.

### Syntax

```
chaircontrol end_conf
chaircontrol hangup_term "term_no"
chaircontrol list
chaircontrol rel_chair
chaircontrol <register|unregister>
chaircontrol req_chair
chaircontrol req_floor
chaircontrol req_term_name "term_no"
chaircontrol req_vas
chaircontrol set_broadcaster "term_no"
chaircontrol set_term_name "term_no" "term_name"
chaircontrol stop_view
chaircontrol view "term_no"
chaircontrol view_broadcaster
```

| Parameter                                 | Description                                                                           |
|-------------------------------------------|---------------------------------------------------------------------------------------|
| end_conf                                  | Ends the call and returns the same feedback as hangup_term for each site in the call. |
| hangup_term<br>"term_no"                  | Disconnects the specified site from the call.                                         |
| list                                      | Lists the sites in the call.                                                          |
| rel_chair                                 | Releases the chair.                                                                   |
| register                                  | Registers to receive feedback on all chair control operations.                        |
| unregister                                | Unregisters (stops feedback on all chair control operations).                         |
| req_chair                                 | Requests the chair.                                                                   |
| req_floor                                 | Requests the floor.                                                                   |
| req_term_name<br>"term_no"                | Requests the name for the specified terminal number.                                  |
| req_vas                                   | Requests voice-activated switching.                                                   |
| set_broadcaster<br>"term_no"              | Requests the specified terminal to become the broadcaster.                            |
| set_term_name<br>"term_no"<br>"term_name" | Sets the name for the specified terminal number.                                      |

| Parameter        | Description                           |
|------------------|---------------------------------------|
| stop_view        | Stops viewing the specified terminal. |
| view "term_no"   | Views the specified terminal.         |
| view_broadcaster | Views the broadcaster.                |

## Feedback Examples

- chaircontrol rel\_chair  
returns  
chaircontrol rel\_chair granted  
chaircontrol view 1.1 granted
- chaircontrol req\_vas  
returns  
chaircontrol req\_vas granted  
chaircontrol view 1.1 granted
- chaircontrol hangup\_term 1.4  
returns  
chaircontrol del\_term 1.4  
chaircontrol terminal 1.4 left conference  
cleared: call [34]  
digital string[IP: 192.168.1.101 NAME: Polycom HDX Demo]  
ended: call [34]

## Comments

Terminal numbers are set by the MCU and are of the form x.y where x is the MCU and y is the participant.

You only need to enclose a parameter in quotes if it contains a space.

## clientvalidatepeercert

Enables certificate validation by specifying whether the HDX system requires the server to present a valid certificate when the server makes secure connections for services such as provisioning, directory search, and session initiation protocol (SIP) calling.

### Syntax

```
cl i entval i datepeercert get
cl i entval i datepeercert <yes|no>
```

| Parameter | Description                                                      |
|-----------|------------------------------------------------------------------|
| get       | Returns the peer certificate validation setting for client.      |
| yes       | Enables the peer certificate validation requirement for client.  |
| no        | Disables the peer certificate validation requirement for client. |

### Feedback Examples

- cl i entval i datepeercert get  
returns  
cl i entval i datepeercert no
- cl i entval i datepeercert yes  
returns  
cl i entval i datepeercert yes

## cmdecho

Turns command echoing on or off.

### Syntax

cmdecho <on|off>

| Parameter | Description                                                                   |
|-----------|-------------------------------------------------------------------------------|
| on        | Turns on command echoing so that everything you type is echoed on the screen. |
| off       | Turns off command echoing so that nothing you type is echoed on the screen.   |

### Feedback Examples

- cmdecho on  
returns  
cmdecho on
- cmdecho off  
returns  
cmdecho off

### Comments

This setting defaults to on every time the system powers up. You might want to turn off command echoing when sending batches of commands (in an init script) to simplify the output.

## colorbar

Turns the video diagnostics color bars on or off.

### Syntax

colorbar <on|off>

| Parameter | Description                           |
|-----------|---------------------------------------|
| on        | Turns on the color bar test pattern.  |
| off       | Turns off the color bar test pattern. |

### Feedback Examples

- colorbar on  
returns  
colorbar on
- colorbar off  
returns  
colorbar off

## configchange (deprecated)

Sets or gets the notification state for configuration changes. This command has been deprecated.

### Syntax

```
confi gchange <get|register|unregister>
```

| Parameter  | Description                                                                     |
|------------|---------------------------------------------------------------------------------|
| get        | Returns the current setting.                                                    |
| register   | Registers to receive notifications when configuration variables have changed.   |
| unregister | Unregisters to receive notifications when configuration variables have changed. |

### Feedback Examples

- confi gchange register  
returns  
confi gchange registered
- confi gchange unregister  
returns  
confi gchange unregistered
- confi gchange get  
returns  
confi gchange unregistered

## configdisplay

Sets or gets the video format, aspect ratio and resolution for Monitor 1 or Monitor 2.

### Syntax

```
confi gdi spl ay [<moni tor1|moni tor2>] get
confi gdi spl ay <moni tor1|moni tor2>
<component|vga|dvi |composi te|s_vide o> <4: 3|16: 9>
confi gdi spl ay <moni tor1|moni tor2>
<component|vga|dvi |composi te|s_vide o> <4: 3|16: 9> [<720p|1080i |1080p>]
[<50hz720p|60hz720p|50hz1080i |60hz1080i |50hz1080p|60hz1080p>]
confi gdi spl ay moni tor2 off
```

| Parameter  | Description                                                                                                                                                                        |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| get        | Returns the current setting.                                                                                                                                                       |
| moni tor1  | Specifies Monitor 1.                                                                                                                                                               |
| moni tor2  | Specifies Monitor 2.                                                                                                                                                               |
| s_vide o   | Sets the specified display to S-Video format.                                                                                                                                      |
| composi te | Sets the specified display to Composite format.                                                                                                                                    |
| vga        | Sets the specified display to VGA format.                                                                                                                                          |
| dvi        | Sets the specified display to DVI format.                                                                                                                                          |
| component  | Sets the specified display to Component format.                                                                                                                                    |
| 4: 3       | Sets the display aspect ratio to 4:3 (standard).                                                                                                                                   |
| 16: 9      | Sets the display aspect ratio to 16:9 (wide screen).                                                                                                                               |
| 720p       | Sets the resolution to 1280x720p, 50-60 Hz (refresh rate determined by whether unit is PAL or NTSC, respectively). For monitors with Component format and 16:9 aspect ratio only.  |
| 1080i      | Sets the resolution to 1920x1080i, 50-60 Hz (refresh rate determined by whether unit is PAL or NTSC, respectively). For monitors with Component format and 16:9 aspect ratio only. |
| 1080p      | Sets the resolution to 1920x1080p, 50-60 Hz (refresh rate determined by whether unit is PAL or NTSC, respectively). For monitors with Component format and 16:9 aspect ratio only. |
| 50hz720p   | Sets the resolution to 1280x720p, 50 Hz (PAL systems-only). For monitors with Component format and 16:9 aspect ratio only.                                                         |

| Parameter | Description                                                                                                                                    |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 60hz720p  | Sets the resolution to 1280x720p, 60 Hz (NTSC systems-only). For DVI and VGA formats with a 16:9 aspect ratio only.                            |
| 50hz1080i | Sets the resolution to 1920x1080i, 50 Hz (DVI-only, PAL systems-only). For DVI and VGA formats with a 16:9 aspect ratio only.                  |
| 60hz1080i | Sets the resolution to 1920x1080i, 60 Hz (DVI-only, NTSC systems-only). For DVI and VGA formats with a 16:9 aspect ratio only.                 |
| 50hz1080p | Sets the resolution to 1920x1080p, 50 Hz (PAL systems-only). For DVI and VGA formats with a 16:9 aspect ratio only.                            |
| 60hz1080p | Sets the resolution to 1920x1080p, 60 Hz (NTSC systems-only). This setting is available for DVI and VGA formats with a 16:9 aspect ratio only. |
| off       | Sets Monitor 2 to off.                                                                                                                         |

## Feedback Examples

- confi gdi spl ay get  
returns  
confi gdi spl ay moni tor1 dvi 16:9 moni tor2 vga 16:9
- confi gdi spl ay moni tor2 get  
returns  
confi gdi spl ay moni tor2 vga 16:9
- confi gdi spl ay moni tor2 vga 4.3  
returns  
confi gdi spl ay moni tor2 vga 4.3
- confi gdi spl ay moni tor1 dvi 16:9 60hz1080p  
returns  
confi gdi spl ay moni tor1 dvi 16:9 60hz1080p

## configparam

Sets or gets the video quality setting for the specified video input for motion or sharpness.

### Syntax

```
configparam <"parameter"> get
configparam <"parameter"> set <"value">
```

| Parameter                         | Possible Values  | Description                                                                                                                   |
|-----------------------------------|------------------|-------------------------------------------------------------------------------------------------------------------------------|
| camera_video_quality<br><1 2 3 4> | motion sharpness | Sets or gets the video quality setting for the specified video input for motion or for sharpness (for images without motion). |

### Feedback Examples

- configparam camera\_video\_quality 1 set motion  
returns  
camera1\_video\_quality motion

## configpresentation

Sets or gets the content presentation settings for Monitor 1 or Monitor 2.

### Syntax

```
configpresentation get
configpresentation <monitor1|monitor2> get
configpresentation monitor1 <near|far|content|near-or-far|
content-or-near|content-or-far|all|none>
configpresentation monitor2 <near|far|content|near-or-far|
content-or-near|content-or-far|all|none>
configpresentation monitor1 "value" monitor2 "value"
```

| Parameter       | Description                                                                                      |
|-----------------|--------------------------------------------------------------------------------------------------|
| get             | Returns the current settings for the active monitors.                                            |
| monitor1        | Specifies settings for Monitor 1.                                                                |
| monitor2        | Specifies settings for Monitor 2.                                                                |
| near            | Selects near-site video as the video source to display on the specified monitor.                 |
| far             | Selects far-site video as the video source to display on the specified monitor.                  |
| content         | Selects content as the video source to display on the specified monitor.                         |
| near-or-far     | Selects both near-site and far-site video as video sources to display on the specified monitor.  |
| content-or-near | Selects both near-site video and content as video sources to display on the specified monitor.   |
| content-or-far  | Selects both content and far-site video as video sources to display on the specified monitor.    |
| all             | Selects content, near-site video, and far-site video as video sources for the specified monitor. |
| none            | Clears all video sources for the specified monitor.                                              |
| "value"         | Sets presentation mode for both monitors.                                                        |

## Feedback Examples

- config presentation monitor1 get returns config presentation monitor1: all
- config presentation monitor2 get returns config presentation monitor2: near-or-far
- config presentation monitor2 far returns error: config presentation not applied since monitor2 is off when monitor 2 is off

## confirmmdiradd

Sets or gets the configuration for prompting users to add directory entries for the far sites when a call disconnects.

### Syntax

```
confi rmdd radd <get|yes|no>
```

| Parameter | Description                                                                                                                             |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                                            |
| yes       | When a call disconnects, the user is prompted to create a local directory entry for the far site if it is not already in the directory. |
| no        | The user is not prompted to create a local directory entry after a call disconnects.                                                    |

### Feedback Examples

- confi rmdd radd no  
returns  
confi rmdd radd no
- confi rmdd radd yes  
returns  
confi rmdd radd yes
- confi rmdd radd get  
returns  
confi rmdd radd yes

## confirmmdir del

Sets or gets the configuration for requiring users to confirm directory deletions.

### Syntax

```
confi rmdi rdel <get|yes|no>
```

| Parameter | Description                                                                                                                       |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                                      |
| yes       | When deleting an entry from the directory (address book), the user is prompted with "Are you sure you want to delete this entry?" |
| no        | When deleting an entry from the directory (address book), the user is not prompted with a message.                                |

### Feedback Examples

- confi rmdi rdel no  
returns  
confi rmdi rdel no
- confi rmdi rdel yes  
returns  
confi rmdi rdel yes
- confi rmdi rdel get  
returns  
confi rmdi rdel yes

## contentauto

Sets or gets the automatic bandwidth adjustment for people and content in point-to-point H.323 calls. Automatic adjustment maintains equal image quality in the two streams.

### Syntax

contentauto <get|on|off>

| Parameter | Description                                                                                                             |
|-----------|-------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                            |
| on        | Enables automatic bandwidth adjustment for people and content.                                                          |
| off       | Disables automatic bandwidth adjustment for people and content. The system Quality Preference settings is used instead. |

### Feedback Examples

- contentauto off  
returns  
contentauto off
- contentauto on  
returns  
contentauto on
- contentauto get  
returns  
contentauto on

## contentsplash

Enables or disables the splash screen display on content monitors.

### Syntax

`contentsplash <get|yes|no>`

| Parameter | Description                          |
|-----------|--------------------------------------|
| get       | Returns the current setting.         |
| yes       | Turns on the content splash screen.  |
| no        | Turns off the content splash screen. |

### Feedback Examples

- `contentsplash get`  
returns  
`contentsplash yes`
- `contentsplash yes`  
returns  
`contentsplash yes`
- `contentsplash no`  
returns  
`contentsplash no`

### Comments

The splash screen displays a Polycom logo on content-only displays when neither the near end nor the far end is sending content, and when the Polycom HDX system is not in sleep mode.

By default, the content splash value is set to yes.

When the content splash value is set to no, black video or no signal is sent to the monitor, depending on the screen saver output configured for the monitor.

The content splash setting is persistent across the power cycle.

### See Also

[monitor1screensaveroutput](#) command on page [4-236](#) and [monitor2screensaveroutput](#) command on page [4-238](#).

## contentvideoadjustment

Sets or gets the content video adjustment setting.

### Syntax

`contentvi deoadj ustment <get|normal |stretch|zoom>`

| Parameter | Description                                                                                                                                                                                                    |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                                                                                                                   |
| normal    | Preserves the aspect ratio of the source video. The image is scaled (if necessary) to the largest supported resolution that fits on the display without cropping.                                              |
| stretch   | Does not preserve aspect ratio. The image is scaled horizontally and vertically to exactly match the resolution of the display.                                                                                |
| zoom      | Preserves the aspect ratio of the source video. The image is scaled to exactly match one of the display dimensions while matching or exceeding the other display dimension. The image is centered and cropped. |

### Feedback Examples

- `contentvi deoadj ustment zoom`  
returns  
`contentvi deoadj ustment zoom`
- `contentvi deoadj ustment stretch`  
returns  
`contentvi deoadj ustment stretch`
- `contentvi deoadj ustment normal`  
returns  
`contentvi deoadj ustment normal`
- `contentvi deoadj ustment get`  
returns  
`contentvi deoadj ustment normal`

## country

Gets the country setting for the system.

### Syntax

country get

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |

### Feedback Examples

- country get  
returns  
country "united states"

## cts

Sets or gets the CTS serial interface control signal (clear to send) configuration. This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

cts <get|normal|inverted|ignore>

| Parameter | Description                                           |
|-----------|-------------------------------------------------------|
| get       | Returns the current setting.                          |
| normal    | Sets the signal to normal (high voltage is logic 1).  |
| inverted  | Sets the signal to inverted (low voltage is logic 1). |
| ignore    | Ignores the signal.                                   |

### Feedback Examples

- cts normal  
returns  
cts normal
- cts inverted  
returns  
cts inverted
- cts get  
returns  
cts inverted

### Comments

The default setting for this signal is "normal".

## daylightsavings

Sets or gets the daylight savings time setting. When you enable this setting, the system clock automatically changes for daylight saving time.

### Syntax

daylightsavings <get | yes | no>

| Parameter | Description                                              |
|-----------|----------------------------------------------------------|
| get       | Returns the current setting.                             |
| yes       | Enables automatic adjustment for daylight savings time.  |
| no        | Disables automatic adjustment for daylight savings time. |

### Feedback Examples

- daylightsavings no  
returns  
daylightsavings no
- daylightsavings yes  
returns  
daylightsavings yes
- daylightsavings get  
returns  
daylightsavings yes

## dcd

Sets the configuration for the DCD serial interface control signal (data carrier detect). This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

dcd <normal | inverted>

| Parameter | Description                                           |
|-----------|-------------------------------------------------------|
| normal    | Sets the signal to normal (high voltage is logic 1).  |
| inverted  | Sets the signal to inverted (low voltage is logic 1). |

### Feedback Examples

- dcd normal  
returns  
dcd normal
- dcd inverted  
returns  
dcd inverted

### Comments

The default setting for this signal is "normal".

## dcdfilter

Sets or gets the filter setting of the DCD serial interface control signal (data carrier detect). This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

```
dcdfilter <get|on|off>
```

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| on        | Enables the DCD filter.      |
| off       | Disables the DCD filter.     |

### Feedback Examples

- dcdfilter on  
returns  
dcdfilter on
- dcdfilter off  
returns  
dcdfilter off
- dcdfilter get  
returns  
dcdfilter off

### Comments

When this filter is enabled, DCD drops for 60 seconds before changing the call state. The default setting for this signal is "off".

## defaultgateway

Sets or gets the default gateway.

### Syntax

```
defaul tgateway get
defaul tgateway set "xxx. xxx. xxx. xxx"
```

| Parameter            | Description                                                                   |
|----------------------|-------------------------------------------------------------------------------|
| get                  | Returns the default gateway IP address.                                       |
| set                  | Sets the default gateway when followed by the "xxx. xxx. xxx. xxx" parameter. |
| "xxx. xxx. xxx. xxx" | IP address to use as the default gateway.                                     |

### Feedback Examples

- defaul tgateway set 192. 168. 1. 101  
returns  
defaul tgateway 192. 168. 1. 101

### Comments

This setting can only be changed if DHCP is turned off. After making a change, you must restart the system for the setting to take effect.

## destunreachabletx

Sets or gets the system's ability to generate a Destination Unreachable ICMP message in response to a packet that cannot be delivered to its destination for reasons other than congestion.

### Syntax

`destunreachabletx <yes|no>`

| Parameter | Description                                                                                                                                                                             |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                                                                                                                            |
| yes       | Enables the system's ability to generate a destination unreachable ICMP message in response to a packet that cannot be delivered to its destination for reasons other than congestion.  |
| no        | Disables the system's ability to generate a destination unreachable ICMP message in response to a packet that cannot be delivered to its destination for reasons other than congestion. |

### Feedback Examples

- destunreachabletx  
returns  
destunreachabletx no
- destunreachabletx yes  
returns  
destunreachabletx yes

### Comments

This setting is applicable for both IPv4 and IPv6 configurations. After making a change, you must restart the system for the setting to take effect.

### See Also

[icmpoutpackerate](#) on page 4-185.

## dhcp

Sets or gets DHCP options.

### Syntax

dhcp <get|off|client>

| Parameter | Description                                                                                    |
|-----------|------------------------------------------------------------------------------------------------|
| get       | Returns the selected DHCP option.                                                              |
| off       | Disables DHCP.                                                                                 |
| client    | Enables DHCP client, setting the system to obtain an IP address from a server on your network. |

### Feedback Examples

- dhcp off  
returns  
dhcp off
- dhcp client  
returns  
dhcp client
- dhcp get  
returns  
dhcp client

### Comments

After making a change, you must restart the system for the setting to take effect.

# dial

Dials video or audio calls either manually or from the directory.

## Syntax

```
di al addressbook "addr book name"
di al auto "speed" "di al str"
di al manual <56|64> "di al str1" "di al str2" [h320]
di al manual "speed" "di al str1" ["di al str2"] [h323|h320|i p|i sdn|si p]
di al phone "di al string"
di al phone <pots|isdn_phone|sip_speakerphone> "di al string"
```

| Parameter                               | Description                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| addressbook                             | Dials a directory (address book) entry. Requires the name of the entry.                                                                                                                                                                                                                                                                                                                               |
| "addr book name"                        | The name of the directory (address book) entry. The name may be up to 25 characters. Use quotation marks around strings that contain spaces. For example: "John Doe".                                                                                                                                                                                                                                 |
| auto                                    | Dials a video call number dialstr1 at speed of type h323 or h320. Requires the parameters "speed" and "dialstr". Allows the user to automatically dial a number. The system first attempts H.323 and if that fails, rolls over to H.320. Deprecated. Instead of this command, Polycom recommends using di al manual and not specifying a call type.                                                   |
| "speed"                                 | Valid data rate for the network.                                                                                                                                                                                                                                                                                                                                                                      |
| "di al str", "di al str1", "di al str2" | Valid ISDN or IP directory number.                                                                                                                                                                                                                                                                                                                                                                    |
| manual                                  | Dials a video call number dialstr1 at speed of type h323 or h320. Requires the parameters "speed" and "dialstr1".<br>Use di al manual "speed" "di al str" "type" when you do not want automatic call rollover or when the dialstring might not convey the intended transport (for example, an extension with an IP gateway might look like an ISDN number, but in fact corresponds to an IP address). |
| 56 64                                   | Specifies speed for two-channel calls.                                                                                                                                                                                                                                                                                                                                                                |
| h323 h320 i p i sdn si p                | Type of call.<br>Note: The parameters i p and i sdn are deprecated.                                                                                                                                                                                                                                                                                                                                   |

| Parameter                        | Description                                                                                                                                 |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| phone                            | Dials an analog phone number.                                                                                                               |
| pots isdn_phone sip_speakerphone | Specify to dial pots, ISDN or SIP call.                                                                                                     |
| "dial string"                    | Numeric string specifying the phone number to dial.<br>Enclose the string in quotation marks if it includes spaces. Example: "512 555 1212" |

## Feedback Examples

- dial manual 64 5551212 h320  
returns  
dialing manual
- If registered for call state notifications (callstate register), the API returns
 

```
cs: call[44] chan[0] dialstr[5551212] state[ALLOCATED]
cs: call[44] chan[0] dialstr[5551212] state[RINGING]
cs: call[44] chan[0] dialstr[5551212] state[CONNECTED]
cs: call[44] chan[0] dialstr[5551212] state[CONNECTED]
cs: call[44] chan[0] dialstr[5551212] state[COMPLETE]
cs: call[44] chan[0] dialstr[5551212] state[COMPLETE]
active: call[44] speed[64]
```
- dial addressbook "John Polycom"  
returns  
dialing addressbook "John Polycom"
- dial phone pots 123456  
returns  
dialing pots
- dial phone isdn\_phone 123456  
returns  
dialing isdn\_phone
- dial phone sip\_speakerphone 123456  
returns  
dialing sip\_speakerphone
- If registered for call state notifications (callstate register), the API returns
 

```
cs: call[44] chan[0] dialstr[192.168.1.101] state[ALLOCATED]
cs: call[44] chan[0] dialstr[192.168.1.101] state[RINGING]
cs: call[44] chan[0] dialstr[192.168.1.101] state[BONDING]
cs: call[44] chan[0] dialstr[192.168.1.101] state[BONDING]
cs: call[44] chan[0] dialstr[192.168.1.101] state[COMPLETE]
active: call[44] speed[384]
```

Notes: The [BONDING] responses in IP calls are extraneous text

that will be removed in a subsequent software version.

Call ID (call [44]) is an example of the response. The Call ID number depends upon the call type.

- If registered for call status notifications (notify callstatus), the API returns,

```
notification: call status: outgoing: 45: null
1: : opened: : 0: videocontrol
```

```
notification: call status: outgoing: 45: Polycom Austin:
192.168.1.101: connecting: 384: 0: videocontrol
```

```
notification: call status: outgoing: 45: Polycom Austin:
192.168.1.101: connected: 384: 0: videocontrol
```

Note: The call ID number (45) is an example of the response. The Call ID number depends upon the call type.

## Comments

When searching for feedback from the dial command, expect to see the set of described strings as many times as there are channels in the call.

When initiating a multipoint call or adding multiple sites to a multipoint call over ISDN, you must be sure that the total call rate does not exceed the bandwidth of the ISDN interface. Otherwise, one of the calls may not connect.

For example, the total ISDN bandwidth for a T1 line is 1544 kbit/s. Thus, making the following five calls in succession violates the ISDN bandwidth rule, because the total ISDN bandwidth would require 1920 kbit/s ( $1920 = 384 * 5$ ), and one of the calls may not connect:

- dial manual 384 5551212
- dial manual 384 5561212
- dial manual 384 5571212
- dial manual 384 5581212
- dial manual 384 5591212

Similarly, making the following two calls in a multipoint call where sites 1, 2, and 3 are already connected at 256 kbit/s each violates the ISDN bandwidth rule. This is because the total ISDN bandwidth required becomes 1792 kbit/s ( $1792 = 256 * 3 + 512 * 2$ ), and one of these two new calls may not connect:

- dial manual 512 5581212
- dial manual 512 5591212

Note: The ISDN bandwidth rule is not applicable to IP calls and only applies when multiple ISDN dial commands are issued in succession without waiting for the active call notification (i.e., active: call[36] speed[128]) between dial commands. Adding single calls to a multipoint call and then waiting for the active call notification does not break the rule, because the system downspeeds calls to meet the required ISDN bandwidth limitations.

## See Also

Refer to the [callstate](#) command on page [4-62](#). You can use callstate register to obtain updated information on the status of a call. For example, when using the dial manual to place a call, callstate register can tell you when the call is connected.

## dialchannels

Sets or gets whether to dial ISDN channels in parallel. This command is only applicable if you have an ISDN network interface connected to your system.

### Syntax

```
di al channel s get
di al channel s set n
```

| Parameter | Description                                                       |
|-----------|-------------------------------------------------------------------|
| get       | Returns the current setting.                                      |
| set       | Sets the number of channels to dial.                              |
| n         | Sets the number of channels to dial. n is 8 for QBRI, 12 for PRI. |

### Feedback Examples

- di al channel s set 8  
returns  
di al channel s 8
- di al channel s get  
returns  
di al channel s 8

## diffservaudio, diffservfecc, diffservvideo

Sets or gets the DiffServ option and specifies a priority level for audio, far-end camera control (FECC) and other call control channels, and video, respectively. The priority level value for each can be between 0 and 63.

### Syntax

```
di ffserveaudi o get
di ffserveaudi o set {0..63}
di ffservefccc get
di ffservefccc set {0..63}
di ffservevi deo get
di ffservevi deo set {0..63}
```

| Parameter | Description                                                          |
|-----------|----------------------------------------------------------------------|
| get       | Returns the current setting.                                         |
| set       | Sets the command. A priority level in the range {0..63} is required. |
| {0..63}   | Specifies the priority level.                                        |

### Feedback Examples

- di ffserveaudi o set 2  
returns  
di ffserveaudi o 2
- di ffserveaudi o get  
returns  
di ffserveaudi o 2

### Comments

The diffservefccc command is equivalent to the Control setting in the user interface.

If the [typeofservice](#) command on page 4-331 is set to i p-precedence rather than to di ffserv, these commands are not applicable.

## directory

Sets or gets whether the **Directory** button appears on the Home screen.

### Syntax

```
directory <get|yes|no>
```

| Parameter | Description                                               |
|-----------|-----------------------------------------------------------|
| get       | Returns the current setting.                              |
| yes       | Displays the <b>Directory</b> button on the Home screen.  |
| no        | Removes the <b>Directory</b> button from the Home screen. |

### Feedback Examples

- directory yes  
returns  
directory yes
- directory no  
returns  
directory no
- directory get  
returns  
directory no

## display (deprecated)

Displays information about the current call or the system. With the implementation of the [callinfo](#) command on page [4-61](#) and [whoami](#) command on page [4-367](#), this command has been deprecated.

### Syntax

```
display call
display whoami
```

| Parameter | Description                                                                                                                      |
|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| call      | Displays the following information about the current call: call ID, status, speed, the number to which this system is connected. |
| whoami    | Returns information about the current system.                                                                                    |

### Feedback Examples

- `display call`  
returns  
Call ID Status Speed Dial Num  
-----  
34CM\_CALLINFO\_CONNECTED 384192. 168. 1. 101
- `display whoami`  
returns  
Hi, my name is: Polycom HDX Demo  
Here is what I know about myself:  
Model : HDX9004  
Serial Number: 82065205E72EC1  
Software Version: Release 2.5 - 30Nov2008 11: 30  
Build Information: root on domain.polycom.com  
FPGA Revision: 4. 3. 0  
Main Processor: BSP15  
Time In Last Call: 0: 43: 50  
Total Time In Calls: 87: 17: 17  
Total Calls: 819  
SNTP Time Service: auto insync ntp1.polycom.com  
Local Time is: Wed, 30 Nov 2008  
Network Interface: NONE  
IP Video Number: 192. 168. 1. 101  
ISDN Video Number: 7005551212  
MP Enabled: True  
H. 323 Enabled: True

FTP Enabled: True  
HTTP Enabled: True  
SNMP Enabled: True

## displayglobaladdresses

Sets or gets the display of global addresses in the global directory.

### Syntax

di spl aygl obal addresses <get|yes|no>

| Parameter | Description                               |
|-----------|-------------------------------------------|
| get       | Returns the current setting.              |
| yes       | Enables the display of global addresses.  |
| no        | Disables the display of global addresses. |

### Feedback Examples

- di spl aygl obal addresses yes  
returns  
di spl aygl obal addresses yes
- di spl aygl obal addresses no  
returns  
di spl aygl obal addresses no
- di spl aygl obal addresses get  
returns  
di spl aygl obal addresses no

# displaygraphics

Sets or gets the display of graphic icons while in a call.

## Syntax

```
di spl aygraphi cs <get|yes|no>
```

| Parameter | Description                            |
|-----------|----------------------------------------|
| get       | Returns the current setting.           |
| yes       | Enables the display of graphic icons.  |
| no        | Disables the display of graphic icons. |

## Feedback Examples

- di spl aygraphi cs yes  
returns  
di spl aygraphi cs yes
- di spl aygraphi cs no  
returns  
di spl aygraphi cs no
- di spl aygraphi cs get  
returns  
di spl aygraphi cs no

## displayipext

Sets or gets the display of the IP extension field. This extension is needed when placing a call through a gateway.

### Syntax

di spl ayi pext <get|yes|no>

| Parameter | Description                              |
|-----------|------------------------------------------|
| get       | Returns the current setting.             |
| yes       | Enables the display of the IP extension. |
| no        | Enables the display of the IP extension. |

### Feedback Examples

- di spl ayi pext yes  
returns  
di spl ayi pext yes
- di spl ayi pext no  
returns  
di spl ayi pext no
- di spl ayi pext get  
returns  
di spl ayi pext no

### Comments

When this option is selected, the extension field is visible on the Home screen.

## displayipisdninfo (deprecated)

Sets or gets the display of IP and ISDN information on the Home screen. This command has been deprecated. Polycom recommends using the [ipisdninfo](#) command on page [4-196](#).

### Syntax

```
di spl ayi pi sdni nfo <yes|no|both|i p-onl y|i sdn-onl y|none|get>
```

| Parameter   | Description                                                                     |
|-------------|---------------------------------------------------------------------------------|
| yes         | Enables the display of both IP and ISDN information.<br>Provides feedback both. |
| no          | Disables the display of IP and ISDN information.<br>Provides feedback none.     |
| both        | Enables the display of both IP and ISDN information.                            |
| i p-onl y   | Enables the display of IP information.                                          |
| i sdn-onl y | Enables the display of ISDN information.                                        |
| none        | Disables the display of IP and ISDN information.                                |
| get         | Returns the current setting.                                                    |

### Feedback Examples

- di spl ayi pi sdni nfo yes  
returns  
di spl ayi pi sdni nfo both
- di spl ayi pi sdni nfo no  
returns  
di spl ayi pi sdni nfo none
- di spl ayi pi sdni nfo ip-only  
returns  
di spl ayi pi sdni nfo ip-only
- di spl ayi pi sdni nfo get  
returns  
di spl ayi pi sdni nfo ip-only

## displayparams

Outputs a list of system settings.

### Syntax

di spl ayparams

### Feedback Examples

- di spl ayparams  
returns  
systemname Polycom HDX Demo  
hostname <empty>  
ipaddress 192.168.1.101  
version "2.5"

```

## **dns**

Sets or gets the configuration for up to four DNS servers.

### **Syntax**

```
dns get {1..4}
dns set {1..4} "xxx. xxx. xxx. xxx"
```

| Parameter            | Description                                                                                                                                                |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| get                  | Returns the current IP address of the specified server.<br>A server identification number {1..4} is required.                                              |
| {1..4}               | Specifies the server identification number.                                                                                                                |
| set                  | Sets the IP address of the specified DNS server when followed by the "xxx. xxx. xxx. xxx" parameter.<br>A server identification number {1..4} is required. |
| "xxx. xxx. xxx. xxx" | Specifies the IP address for the specified server.                                                                                                         |

### **Feedback Examples**

- dns set 1 192. 168. 1. 205  
returns  
dns 1 192. 168. 1. 205

### **Comments**

After making a change, you must restart the system for the setting to take effect. These values cannot be set if the system is in DHCP client mode.

## dsr

Sets or gets the configuration of the DSR serial interface control signal (data set ready). This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

```
dsr <get|normal|inverted>
```

| Parameter | Description                                           |
|-----------|-------------------------------------------------------|
| get       | Returns the current setting.                          |
| normal    | Sets the signal to normal (high voltage is logic 1).  |
| inverted  | Sets the signal to inverted (low voltage is logic 1). |

### Feedback Examples

- dsr normal  
returns  
dsr normal
- dsr inverted  
returns  
dsr inverted
- dsr get  
returns  
dsr inverted

### Comments

The default setting for this signal is "normal".

## dsranswer

Sets or gets the configuration of the DSR serial interface control signal to indicate an incoming call. This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

dsranswer <get|on|off>

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| on        | Turns on the option.         |
| off       | Turns off the option.        |

### Feedback Examples

- dsranswer on  
returns  
dsranswer on
- dsranswer off  
returns  
dsranswer off
- dsranswer get  
returns  
dsranswer off

## dtr

Sets or gets the configuration of the DTR serial interface control signal (data terminal ready). This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

```
dtr <get|normal |inverted|on>
```

| Parameter | Description                                                                        |
|-----------|------------------------------------------------------------------------------------|
| get       | Returns the current setting.                                                       |
| normal    | Sets the signal to normal (high voltage is logic 1).                               |
| inverted  | Sets the signal to inverted (low voltage is logic 1).                              |
| on        | Sets constant high voltage. If this option is selected, inverted is not an option. |

### Feedback Examples

- dtr normal  
returns  
dtr normal
- dtr inverted  
returns  
dtr inverted
- dtr on  
returns  
dtr on
- dtr get  
returns  
dtr on

### Comments

The default setting for the signal is "normal".

## dualmonitor

Sets or gets whether video is displayed using dual monitor emulation, or split-screen mode, when using one monitor.

### Syntax

```
dualmonitor <get|yes|no>
```

| Parameter | Description                      |
|-----------|----------------------------------|
| get       | Returns the current setting.     |
| yes       | Enables dual monitor emulation.  |
| no        | Disables dual monitor emulation. |

### Feedback Examples

- `dualmonitor yes`  
returns  
`dualmonitor yes`
- `dualmonitor no`  
returns  
`dualmonitor no`
- `dualmonitor get`  
returns  
`dualmonitor no`

# dynamicbandwidth

Sets or gets the use of dynamic bandwidth allocation for Quality of Service.

## Syntax

```
dynami cbandwi dth <get|yes|no>
```

| Parameter | Description                            |
|-----------|----------------------------------------|
| get       | Returns the current setting.           |
| yes       | Enables the dynamic bandwidth option.  |
| no        | Disables the dynamic bandwidth option. |

## Feedback Examples

- dynami cbandwi dth yes  
returns  
dynami cbandwi dth yes
- dynami cbandwi dth no  
returns  
dynami cbandwi dth no
- dynami cbandwi dth get  
returns  
dynami cbandwi dth no

## Comments

The system's dynamic bandwidth function automatically finds the optimum line speed for a call. If you experience excessive packet loss while in a call, the dynamic bandwidth function decrements the line speed until there is no packet loss. This is supported in calls with end points that also support dynamic bandwidth.

## e164ext

Sets or gets an H.323 (IP) extension, also known as an E.164 name.

### Syntax

```
e164ext get
e164ext set "e. 164name"
```

| Parameter    | Description                                                                                                            |
|--------------|------------------------------------------------------------------------------------------------------------------------|
| get          | Returns the current setting.                                                                                           |
| set          | Sets the E.164 extension when followed by the "e. 164name" parameter. To erase the current setting, omit "e. 164name". |
| "e. 164name" | A valid E.164 extension (usually a four-digit number).                                                                 |

### Feedback Examples

- e164ext set  
returns  
e164ext <empty>
- e164ext set 7878  
returns  
e164ext 7878
- e164ext get 7878  
returns  
e164ext 7878

### Comments

The extension number is associated with a specific LAN device.

# echo

Prints "string" back to the API client screen.

## Syntax

echo "string"

| Parameter | Description                       |
|-----------|-----------------------------------|
| "string"  | Text to be printed to the screen. |

## Feedback Examples

- echo End of abk range resul ts  
returns  
End of abk range resul ts

## Comments

Certain API commands print multiple lines without any delimiter string to notify end of command response. This forces a control panel program to guess when the command's response string is going to end. In those scenarios, control panel can issue the legacy command followed by echo command with a delimiter string of its choosing. Once legacy command's response ends, echo command gets processed, which results in the delimiter string printed to the API client.

## echocanceller

Sets or gets the configuration of echo cancellation, which prevents users from hearing their voices loop back from the far site.

### Syntax

```
echocanceller <get|yes|no>
```

| Parameter | Description                         |
|-----------|-------------------------------------|
| get       | Returns the current setting.        |
| yes       | Enables the echo canceller option.  |
| no        | Disables the echo canceller option. |

### Feedback Examples

- echocanceller yes  
returns  
echocanceller yes  
echocanceller yes
- echocanceller no  
returns  
echocanceller no  
echocanceller no
- echocanceller get  
returns  
echocanceller no  
echocanceller no

### Comments

This option is enabled by default. Polycom strongly recommends that you do not turn off echo cancellation except when using an external microphone system with its own built-in echo cancellation.

## echoreply

Sets or gets the system's ability to send an Echo Reply message in response to an Echo Request message sent to an IPv6 multicast/anycast address.

### Syntax

```
echoreply <get|yes|no>
```

| Parameter | Description                     |
|-----------|---------------------------------|
| get       | Returns the current setting.    |
| yes       | Enables the echo reply option.  |
| no        | Disables the echo reply option. |

### Feedback Examples

- echoreply get  
returns  
echoreply yes
- echoreply no  
returns  
echoreply no

### Comments

This setting is applicable for both IPv4 and IPv6 configurations. The number of responses may be traffic-conditioned to limit the effect of a denial of service attack.

After making a change, you must restart the system for the setting to take effect.

## enablefirewalltraversal

Sets or gets the **Enable H.460 Firewall Traversal** setting. This feature requires an Edgewater session border controller that supports H.460.

### Syntax

```
enabl efi rewal l traversal <get|on|off>
```

| Parameter | Description                              |
|-----------|------------------------------------------|
| get       | Returns the current setting.             |
| on        | Enables the firewall traversal feature.  |
| off       | Disables the firewall traversal feature. |

### Feedback Examples

- enabl efi rewal l traversal on  
returns  
enabl efi rewal l traversal on
- enabl efi rewal l traversal off  
returns  
enabl efi rewal l traversal off
- enabl efi rewal l traversal get  
returns  
enabl efi rewal l traversal off

## enablekeyboardnoisereduction

Sets or gets the **Enable Keyboard Noise Reduction** setting.

### Syntax

enablekeyboardnoisereduction <get|yes|no>

| Parameter | Description                        |
|-----------|------------------------------------|
| get       | Returns the current setting.       |
| yes       | Enables keyboard noise reduction.  |
| no        | Disables keyboard noise reduction. |

### Feedback Examples

- enablekeyboardnoisereduction yes  
returns  
enablekeyboardnoisereduction yes
- enablekeyboardnoisereduction no  
returns  
enablekeyboardnoisereduction no
- enablekeyboardnoisereduction get  
returns  
enablekeyboardnoisereduction no

## enablelivemusicmode

Sets or gets the **Enable Live Music Mode** setting.

### Syntax

```
enabl el i vemusi cmode <get|yes|no>
```

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| yes       | Enables live music mode.     |
| no        | Disables live music mode.    |

### Feedback Examples

- enabl el i vemusi cmode yes  
returns  
enabl el i vemusi cmode yes
- enabl el i vemusi cmode no  
returns  
enabl el i vemusi cmode no
- enabl el i vemusi cmode get  
returns  
enabl el i vemusi cmode no

## enablepvec

Sets or gets the Polycom Video Error Concealment (PVEC) setting on the system.

### Syntax

```
enabl epvec <get|yes|no>
```

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| yes       | Enables the PVEC option.     |
| no        | Disables the PVEC option.    |

### Feedback Examples

- enabl epvec yes  
returns  
enabl epvec yes
- enabl epvec no  
returns  
enabl epvec no
- enabl epvec get  
returns  
enabl epvec no

### Comments

This option is enabled by default.

## enablersvp

Sets or gets the RSVP (Resource Reservation Setup Protocol) setting on the system, which requests that routers reserve bandwidth along an IP connection path.

### Syntax

enabl ersvp <get|yes|no>

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| yes       | Enables the RSVP option.     |
| no        | Disables the RSVP option.    |

### Feedback Examples

- enabl ersvp yes  
returns  
enabl ersvp yes
- enabl ersvp no  
returns  
enabl ersvp no
- enabl ersvp get  
returns  
enabl ersvp no

### Comments

This option is enabled by default.

## enablesnmp

Sets or gets the SNMP configuration.

### Syntax

enabl esnmp <get|yes|no>

| Parameter | Description                  |
|-----------|------------------------------|
| get       | Returns the current setting. |
| yes       | Enables the SNMP option.     |
| no        | Disables the SNMP option.    |

### Feedback Examples

- enabl esnmp yes  
returns  
enabl esnmp yes
- enabl esnmp no  
returns  
enabl esnmp no
- enabl esnmp get  
returns  
enabl esnmp no

### Comments

After making a change, you must restart the system for the setting to take effect.

## encryption

Sets or gets the AES encryption mode for the system.

### Syntax

`encryption <get|yes|no|requiredvideoonly|requiredallcalls>`

| Parameter         | Description                                                                                                                                                           |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| get               | Returns the current setting.                                                                                                                                          |
| yes               | Use encryption when the far site is capable of encryption.<br>Note: This parameter is called "When Available" in the user interface.                                  |
| no                | Disables encryption.<br>Note: This parameter is called "Off" in the user interface.                                                                                   |
| requiredvideoonly | Enforces encryption on all video endpoints. Any video calls to or from systems that do not have encryption enabled are not connected. Audio-only calls are connected. |
| requiredallcalls  | Enforces encryption on all endpoints. Any video or audio calls to or from systems that do not have encryption enabled are rejected and are not connected.             |

### Feedback Examples

- `encryption yes`  
returns  
`encryption yes`
- `encryption no`  
returns  
`encryption no`
- `encryption get`  
returns  
`encryption no`
- `encryption requiredvideoonly`  
returns  
`encryption requiredvideoonly`
- `encryption requiredallcalls`  
returns  
`encryption requiredallcalls`

## Comments

You cannot use this command while a call is in progress. Using this command while the system is in a call returns an “error: command has illegal parameters” message.

## exit

Ends the API command session.

### Syntax

exit

### Feedback Examples

- exit  
returns  
Connection to host lost.

### Comments

This command ends a Telnet session. For serial sessions, this command effectively starts a new session.

## exportdirectory

Exports a directory in XML format.

### Syntax

```
exportdirectory
```

### Feedback Example

```
exportdirectory
returns
exportdirectory started
<?xml version="1.0" encoding="UTF-8" ?>
<addresses>
<entrytype type="entry" name="Polycom Austin USA IP"
fileename="Polycom_Austin_USA_IP.abk"
uni queid="Polycom_Austin_USA_IP.abk">
<address fileename="Polycom_Austin_USA_IP.abk" langid=""
di splayname="" name="Polycom Austin USA IP">
<h323 address="l obby.austi n.pol ycom.com" speed="256"/>
</address>
</entrytype>
<entrytype type="entry" name="Polycom Hong Kong"
fileename="Polycom_Hong_Kong.abk"
uni queid="Polycom_Hong_Kong.abk">
<address fileename="Polycom_Hong_Kong.abk" langid=""
di splayname="" name="Polycom Hong Kong">
<isdn country_code="852" area_code="2876" numberA="9466"
numberB="9466" speed="2x64"/>
</address>
</addresses>
</xml >
exportdirectory done
```

### Comments

When importing directory data back into the system, use the data in its entirety (not edited in any form). There is information that is used by the system to determine what type (XML or CSV) of data is being imported.

`exportdirectory` done as the last line of returned data indicates that all directory data has been exported.

Do not use `exportdirectory` to interpret the data that is returned. Simply store and use the data as input to the `importdirectory` command or import directory utility in the web interface. The format of the exported directory data might change in future software releases and any application attempting to interpret the data could find its ability to do so compromised in later releases of Polycom HDX software.

Additional Usage Notes:

- Polycom HDX systems running software version 2.6 or later can import directory data exported from systems running 2.6 and earlier versions.
- Polycom HDX systems running software versions earlier than 2.6 cannot import directory data exported by systems running software version 2.6 or later.

## See Also

[importdirectory](#) command on page 4-187.

## exportprofile

Exports system and user profile information in a CSV format. The output is available through a telnet or serial port connection.

### Syntax

```
exportprofile
```

### Feedback Example

```
exportprofile started
h323name, s8w
hdaccelerator, BrutusT
avayaenabled, ""
systemsoftwareversion, 2.6.0
ipmaximizing, 4096
speakevolume, 25
sysname, s8w
speedstranslated, Auto~128~256~384~512~768~1024~1472~1920~4096
directoryinfourdated, True
pwcreatetimemirremoteuser0, 0
.
.
.
buidmodel, ROOSEVELT
homebutton, MAKEACALL
digitalnumberext, ""
mp8enabled, ""
lastlogonfromadmindomain, Local
timezone, CST
presence, AVAILABLE
profilechecksum, 16813327827
exportprofile done
```

### Comments

When importing profile data back into the system, use the data in its entirety (not edited in any form). The system may use the checksum utility to verify of integrity of the data when imported back into the system.

exportprofile done as the last line of returned data indicates that all the profile data has been exported.

Do not use exportprofile to interpret the data that is returned. Simply store and use the data as input to the importprofile command or import profile utility in the web interface. The format of the exported data might change in future software releases and any application attempting to interpret the data could find its ability to do so compromised in later releases of Polycom HDX software.

## See Also

[importprofile](#) command on page [4-190](#).

## farcontrolnearcamera

Sets or gets far control of the near camera, which allows far sites to control the camera on your system.

### Syntax

```
farcontrol nearcamera <get|yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Allows the far site to control the near camera if the far site has this capability.
no	Disables far control of the near camera.

### Feedback Examples

- farcontrol nearcamera yes  
returns  
farcontrol nearcamera yes
- farcontrol nearcamera no  
returns  
farcontrol nearcamera no
- farcontrol nearcamera get  
returns  
farcontrol nearcamera no

## farnametimedisplay

Sets or gets the length of time the far-site name is displayed on the system.

### Syntax

```
farnameti medi spl ay off
farnameti medi spl ay <get|on|15|30|60|120>
```

Parameter	Description
off	Disables the far site name display.
get	Returns the current setting.
on	Displays the far site name for the duration of the call.
15 30 60 120	Specifies the number of seconds to display the far site name at the beginning of a call.

### Feedback Examples

- farnameti medi spl ay off  
returns  
farnameti medi spl ay off
- farnameti medi spl ay on  
returns  
farnameti medi spl ay on
- farnameti medi spl ay 60  
returns  
farnameti medi spl ay 60
- farnameti medi spl ay get  
returns  
farnameti medi spl ay 60

## flash

Flashes the analog phone call.

### Syntax

```
flash ["callid"]
flash ["callid"] ["duration"]
```

Parameter	Description
callid	Specifies the callid to flash.
duration	Specifies the pulse duration in ms.

### Feedback Examples

- `flash 34 5`  
returns  
`flash 34 5`  
and flashes callid 34 for 5 ms

### See Also

You can also use the [phone](#) command on page [4-265](#) to flash an analog phone line.

## gabk (deprecated)

Returns global directory (address book) entries. This command has been deprecated. Polycom recommends using the [gaddrbook](#) command on page [4-141](#).

### Syntax

```
gabk all
gabk batch {0..59}
gabk batch define "start_no" "stop_no"
gabk batch search "pattern" "count"
gabk letter {a..z}
gabk range "start_no" "stop_no"
gabk refresh
```

Parameter	Description
all	Returns all entries in the global directory.
batch	Returns a batch of 20 global directory entries. Requires a batch number, which must be an integer in the range {0..59}.
define	Returns a batch of entries in the range defined by "start_no" to "stop_no." Polycom recommends using gabk range instead of this command.
"start_no"	Specifies the beginning of the range of entries to return.
"stop_no"	Specifies the end of the range of entries to return.
search	Specifies a batch search.
"pattern"	Specifies pattern to match for the batch search.
"count"	Specifies the number of entries to list that match the pattern.
letter	Returns entries beginning with the letter specified from the range {a..z}. Requires one or two alphanumeric characters. Valid characters are: - _ / ; @ , . \ 0 through 9, a through z
range	Returns global directory entries from "start_no" through "stop_no". Requires two integers.
refresh	Gets a more current copy of the global directory.

## Feedback Example

- gabk all  
returns  
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1. 700. 5551212  
i sdnext:  
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1. 700. 5552323  
i sdnext:  
"Polycom HDX Demo 3" i pspd: 384 i pnum: 192. 168. 1. 101 i pext: 7878  
"Polycom HDX Demo 4" i sdnspd: 384 i sdnum: 1. 700. 5553434  
i sdnext:  
(and so on, until all entries in the local directory are listed, then: )  
gabk all done
- gabk batch 0  
returns  
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1. 700. 5551212  
i sdnext:  
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1. 700. 5552323  
i sdnext:  
"Polycom HDX Demo 3" i pspd: 384 i pnum: 192. 168. 1. 101 i pext: 7878  
"Polycom HDX Demo 4" i sdnspd: 384 i sdnum: 1. 700. 5553434  
i sdnext:  
(and so on, through the last entry in the batch of 20 directory entries, such as: )  
"Polycom HDX Demo 20" i pspd: 128 i pnum: 192. 168. 1. 102  
i pext: 787878  
gabk batch 0 done
- gabk batch define 1 2  
returns  
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1. 700. 5551212  
i sdnext:  
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1. 700. 5552323  
i sdnext:  
gabk batch define 1 2 done
- gabk batch search Polycom 2  
returns  
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1. 700. 5551212  
i sdnext:  
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1. 700. 5552323  
i sdnext:  
gabk batch search Polycom 2 done
- gabk letter p  
returns  
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1. 700. 5551212  
i sdnext:  
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1. 700. 5552323  
i sdnext:

```
"Polycom HDX Demo 3" i pspd: 384 i pnum: 192.168.1.101 i pext: 7878
"Polycom HDX Demo 4" i sdnspd: 384 i sdnum: 1.700.5553434
i sdnext:
(and so on, to include all entries in the batch that begin
with p, then:)
gabk letter p done
• gabk range 1 2
returns
"Polycom HDX Demo 1" i sdnspd: 384 i sdnum: 1.700.5551212
i sdnext:
"Polycom HDX Demo 2" i sdnspd: 2x64 i sdnum: 1.700.5552323
i sdnext:
gabk range 1 2 done
```

## Comments

When the system is registered with the LDAP directory server, all gabk commands return the response, command not supported.

gabk entries are entries stored in the global directory. In the user interface, the address book and global address book features are referred to as the *global directory*.

## See Also

To return local directory entries, use the [abk \(deprecated\)](#) command on page [4-9](#).

# gabpassword

Sets the password to gain access to the Global Directory Server.

## Syntax

```
gabpassword set ["password"]
```

Parameter	Description
set	Sets the GDS password to "password". To erase the current setting, omit "password".
"password"	Password to access the GDS server. Valid characters are: a through z (lower and uppercase), -, _, @, /, ;, ., ., \, 0 through 9. Enclose the string in quotation marks if it includes spaces.

## Feedback Examples

- gabpassword set gabpass  
returns  
gabpassword gabpass

This command might not return the current password in correct case-sensitive format.

## Comments

This command cannot be used unless the Remote Access password in the user interface has been set.

## gabserverip

Sets or gets the IP address of the Global Directory Server.

### Syntax

gabserverip <get|set>

Parameter	Description
get	Returns the current setting.
set	Sets the GDS server's IP address when followed by the parameter "xxx. xxx. xxx. xxx". To erase the current setting, omit the "xxx. xxx. xxx. xxx" parameter.

### Feedback Examples

- gabserverip set  
returns  
gabserverip <empty>
- gabserverip set gab.pol.ycom.com  
returns  
gabserverip gab.pol.ycom.com
- gabserverip get  
returns  
gabserverip gab.pol.ycom.com

# gaddrbook

Returns global directory (address book) entries.

## Syntax

```
gaddrbook all
gaddrbook batch {0..59}
gaddrbook batch define "start_no" "stop_no"
gaddrbook batch search "pattern" "count"
gaddrbook letter {a..z}
gaddrbook range "start_no" "stop_no"
gaddrbook refresh
```

Parameter	Description
all	Returns all the entries in the global directory.
batch	Returns a batch of 20 global directory entries. Requires a batch number, which must be an integer in the range {0..59}.
define	Returns a batch of entries in the range defined by "start_no" to "stop_no."
search	Specifies a batch search.
"pattern"	Specifies a pattern to match for the batch search.
"count"	Specifies the number of entries to list that match the pattern.
letter	Returns entries beginning with the letter specified from the range {a..z}. Requires one or two alphanumeric characters. Valid characters are: - _ / ; @ , . \ 0 through 9 a through z
range	Returns global directory entries numbered "start_no" through "stop_no". Requires two integers.
"start_no"	Specifies the beginning of the range of entries to return.
"stop_no"	Specifies the end of the range of entries to return.
refresh	Gets a more current copy of the global directory.

## Feedback Examples

- gaddrbook all  
returns  
gaddrbook 0. "Polycom HDX Demo 1" isdn\_spd: 384

- i sdn\_num: 1. 700. 5551212 i sdn\_ext:  
gaddrbook 1. "Polycom HDX Demo 2" h323\_spd: 384  
h323\_num: 192. 168. 1. 101 h323\_ext: 7878  
gaddrbook 2. "Polycom HDX Demo 3" sip\_spd: 384  
sip\_num: polycomhdx@polycom.com  
gaddrbook 3. "Polycom HDX Demo 3" phone\_num: 1. 512. 5121212  
(and so on, until all entries in the global directory are listed, then:)  
gaddrbook all done
- gaddrbook batch 0  
returns  
gaddrbook 0. "Polycom HDX Demo 1" i sdn\_spd: 384  
i sdn\_num: 1. 700. 5551212 i sdn\_ext:  
gaddrbook 1. "Polycom HDX Demo 2" h323\_spd: 384  
h323\_num: 192. 168. 1. 101 h323\_ext: 7878  
gaddrbook 2. "Polycom HDX Demo 3" sip\_spd: 384  
sip\_num: polycomhdx@polycom.com  
gaddrbook 3. "Polycom HDX Demo 3" phone\_num: 1. 512. 5121212  
(and so on, through the last entry in the batch of 20 directory entries, such as:)  
gaddrbook 19. "Polycom HDX Demo 20" h323\_spd: 384  
h323\_num: 192. 168. 1. 120 h323\_ext:  
gaddrbook batch 0 done
- gaddrbook batch define 0 2  
returns  
gaddrbook 0. "Polycom HDX Demo 1" i sdn\_spd: 384  
i sdn\_num: 1. 700. 5551212 i sdn\_ext:  
gaddrbook 1. "Polycom HDX Demo 2" h323\_spd: 384  
h323\_num: 192. 168. 1. 101 h323\_ext: 7878  
gaddrbook 2. "Polycom HDX Demo 3" sip\_spd: 384  
sip\_num: polycomhdx@polycom.com  
gaddrbook batch define 0 2 done
- gaddrbook batch search Polycom 3  
returns  
gaddrbook 0. "Polycom HDX Demo 1" i sdn\_spd: 384  
i sdn\_num: 1. 700. 5551212 i sdn\_ext:  
gaddrbook 1. "Polycom HDX Demo 2" h323\_spd: 384  
h323\_num: 192. 168. 1. 101 h323\_ext: 7878

gaddrbook 2. "Polycom HDX Demo 3" si p_spd: 384
si p_num: polycomhdx@polycom.com
gaddrbook range 0 2 done
```

## Comments

Entries with multiple addresses (for example, an H.323 address and an ISDN number) return each address type on separate lines with an incremented record number.

When the system is registered with the LDAP directory server, only the gaddrbook batch search “pattern” “count” is supported. All other gaddrbook commands return the response, command not supported.

When the system is registered with the Polycom GDS directory server, all of the gaddrbook commands and parameters are supported.

gaddrbook entries are stored in the global directory (address book).

## gatekeeperip

Sets or gets the IP address of the gatekeeper.

### Syntax

```
gatekeeperip get
gatekeeperip set ["xxx. xxx. xxx. xxx"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the gatekeeper IP address when followed by the "xxx. xxx. xxx. xxx" parameter. To erase the current setting, omit "xxx. xxx. xxx. xxx".
"xxx. xxx. xxx. xxx"	IP address of the gatekeeper.

### Feedback Examples

- gatekeeperip set 192.168.1.205  
returns  
gatekeeperip 192.168.1.205
- gatekeeperip get  
returns  
gatekeeperip 192.168.1.205

Note: The gatekeeperip get command feedback may include the port number after the IP address.

## gatewayareacode

Sets or gets the gateway area code.

### Syntax

```
gatewayareacode get
gatewayareacode set ["areacode"]
```

Parameter	Description
get	Returns the area code for the gateway.
set	Sets the area code when followed by the "areacode" parameter. To erase the current setting, omit "areacode".
"areacode"	Numeric string specifying the area code.

### Feedback Examples

- gatewayareacode get  
returns  
gatewayareacode <empty>
- gatewayareacode set 512  
returns  
gatewayareacode 512
- gatewayareacode get  
returns  
gatewayareacode 512

## gatewaycountrycode

Sets or gets the gateway country code.

### Syntax

```
gatewaycountrycode get
gatewaycountrycode set ["countrycode"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the gateway country code when followed by the "countrycode" parameter. To erase the current setting, omit "countrycode".
"countrycode"	Numeric string specifying the gateway country code.

### Feedback Examples

- gatewaycountrycode set 1  
returns  
gatewaycountrycode 1
- gatewaycountrycode get  
returns  
gatewaycountrycode 1

## gatewayext

Sets or gets the gateway extension number.

### Syntax

```
gatewayext get
gatewayext set ["extension"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the gateway extension number when followed by the "extension" parameter. To reset the default value, omit "extension".
"extension"	Numeric string specifying the gateway extension.

### Feedback Examples

- gatewayext set 59715  
returns  
gatewayext 59715
- gatewayext get  
returns  
gatewayext 59715

## gatewaynumber

Sets or gets the gateway number.

### Syntax

```
gatewaynumber get
gatewaynumber set ["number"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the gateway number when followed by the "number" parameter. To erase the current setting, omit "number".
"number"	Numeric string specifying the gateway number.

### Feedback Examples

- gatewaynumber set 5551212  
returns  
gatewaynumber 5551212
- gatewaynumber get  
returns  
gatewaynumber 5551212

## gatewaynumbertype

Sets or gets the Gateway Number Type, which can be either Direct Inward Dial (DID) or Number+Extension.

### Syntax

```
gatewaynumbertype <get|did|number+extension>
```

Parameter	Description
get	Returns the current setting.
did	Indicates that the gateway number is a direct inward dial number; it has no extension.
number+extension	Indicates that the gateway number includes an extension. This option allows the call to go through directly (it dials the Gateway Number + ## + Extension as one number).

### Feedback Examples

- gatewaynumbertype did  
returns  
gatewaynumbertype direct\_inward\_dial
- gatewaynumbertype number+extension  
returns  
gatewaynumbertype number\_plus\_extension
- gatewaynumbertype get  
returns  
gatewaynumbertype number\_plus\_extension

## gatewayprefix

Sets or gets the gateway prefixes for the corresponding speeds.

### Syntax

```
gatewayprefix get "valid speed"
gatewayprefix set "valid speed" ["value"]
```

Parameter	Description
get	When followed by the "valid speed" parameter, returns the current value for this speed.
"valid speed"	Valid speeds are: 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 8x56, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 16x56, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 24x56, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 1736, 32x56, 28x64, 1848, 1856, 1904, and 1920 kbps.
set	Sets the gateway prefix when followed by the "value" parameter. To erase the current setting, omit "value".
"value"	Prefix (code) used for a particular call speed. Consult your gateway instruction manual to determine which codes are appropriate.

### Feedback Examples

- gatewayprefix set 168 90  
returns  
gatewayprefix 168 90
- gatewayprefix get 168  
returns  
gatewayprefix 168 90

### Comments

Some gateways require a number to be prepended (prefix) to the gateway number. The prefix identifies which gateway is used to dial a call at a particular data rate.

## gatewaysetup

Lists all available speeds and values at once.

### Syntax

gatewaysetup

### Feedback Examples

- gatewaysetup  
returns  
56            <empty>            <empty>  
64            #14                  #16  
2x56         #222                #333  
112           #444                #555  
2x64         <empty>            <empty>  
and so on.

## gatewaysuffix

Sets or gets the gateway suffix.

### Syntax

```
gatewaysuffix get "valid speed"
gatewaysuffix set "valid speed" ["value"]
```

Parameter	Description
get	Returns the current value for this speed.
"valid speed"	Valid speeds are: 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 8x56, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 16x56, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 24x56, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 1736, 32x56, 28x64, 1848, 1856, 1904, and 1920 kbps.
set	Sets the gateway suffix when followed by the "value" parameter. To erase the current setting, omit "value".
"value"	Suffix (code) used for a particular call speed. Consult your gateway instruction manual to determine which codes are appropriate. Use quotation marks around a compound name or strings that contain spaces. For example: "united states" or "111 222 333".

### Feedback Examples

- gatewaysuffix set 192 11  
returns  
gatewaysuffix 192 11
- gatewaysuffix get 192  
returns  
gatewaysuffix 192 11

### Comments

Some gateways require a number to be appended (suffix) to the gateway number. The suffix identifies which gateway is used to dial a call at a particular data rate.

# gdsdirectory

Sets or gets whether the Polycom GDS directory server is enabled.

## Syntax

```
gdsdirectory <get|yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Enables the Polycom GDS directory server.
no	Disables the Polycom GDS directory server. This is the default setting.

## Feedback Examples

- gdsdirectory get  
returns  
gdsdirectory yes
- gdsdirectory no  
returns  
gdsdirectory no

## Comments

Each Polycom system supports a single global directory server at any given time. Therefore, enabling the Polycom GDS directory server automatically disables any other global directory server, such as the LDAP directory server, that is enabled.

If the Polycom GDS directory server and another directory server are defined on the system, the Polycom GDS directory server becomes the default directory server after upgrading the system software.

## gendial

Generates DTMF dialing tones.

### Syntax

gendi al <{0..9} | #| \*>

Parameter	Description
{0..9}	Generates the DTMF tone corresponding to telephone buttons 0-9.
#	Generates the DTMF tone corresponding to a telephone # button.
*	Generates the DTMF tone corresponding to a telephone * button.

### Feedback Examples

- gendi al 2  
returns  
gendi al 2  
and causes the system to produce the DTMF tone corresponding to a telephone's 2 button

## gendialtonepots (deprecated)

Generates DTMF dialing tones over an analog phone line. This command has been deprecated. Polycom recommends using the [gendial](#) command on page [4-154](#).

### Syntax

gendi al tonepots <{0..9}|#|\*>

Parameter	Description
{0..9}	Generates the DTMF tone corresponding to telephone buttons 0-9.
#	Generates the DTMF tone corresponding to a telephone # button.
*	Generates the DTMF tone corresponding to a telephone * button.

### Feedback Examples

- gendi al tonepots 2  
returns  
gendi al tonepots 2  
and causes the system to produce the DTMF tone corresponding to a telephone's 2 button

### See Also

You can use the [gendial](#) command on page [4-154](#).

## generatetone

Turns the test tone on or off. The tone is used to check the monitor audio cable connections or to monitor the volume level.

### Syntax

generatetone <on|off>

Parameter	Description
on	Turns on the test tone.
off	Turns off the test tone.

### Feedback Examples

- generatetone on  
returns  
generatetone on  
and the system produces a test tone
- generatetone off  
returns  
generatetone off  
and the system stops producing a test tone

## get screen

Returns the name of the current screen so that the control panel programmer knows which screen the user interface is currently displaying.

### Syntax

get screen

### Feedback Examples

- get screen  
returns  
screen: near
- get screen  
returns  
screen: makeacall
- get screen  
returns  
screen: generatetone

### See Also

You can also use the [screen command](#) on page [4-298](#).

## getcallstate

Gets the state of the calls in the current conference.

### Syntax

getcallstate

### Feedback Examples

- getcallstate  
returns  
cs: call[34] speed[384] dialstr[192.168.1.101]  
state[connected]  
cs: call[1] inactive  
cs: call[2] inactive

### See Also

To register the shell session to receive notifications about call state activities, see the [callstate](#) command on page [4-62](#).

## getconfiguredipaddress

Retrieves the currently configured IPv4 address from the system.

### Syntax

```
getconfi guredi paddress
```

### Feedback Examples

- getconfi guredi paddress  
returns  
getconfi guredi paddress 1. 2. 3. 4

### Comments

getconfiguredipaddress returns the currently configured IPv4 address of the system regardless of the status of the LAN connection. This differs from the i paddress get command, which returns the current IP address of the system if it has an active LAN connection, else it returns 0.0.0.0.

The definition of "currently configured IPv4 address" depends on the IPv4 address configuration settings:

- If the **Connect to My LAN** setting is disabled, then 0.0.0.0 is returned. Otherwise, the definition depends on the IP Address (IPv4) setting.
- If the IP address is set manually the configured IP address is returned, regardless of whether the LAN connection is currently active.
- If the IP address is obtained automatically, the currently-assigned address is returned, or 0.0.0.0 is returned if there is no active connection.

## gmscity

Sets or gets the Polycom Global Management System™ city information.

### Syntax

```
gmscity get
gmscity set ["ci ty"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the Global Management System city name when followed by the "ci ty" parameter. To erase the current setting, omit "ci ty".
"ci ty"	Character string specifying the city. Enclose the string in quotation marks if it includes spaces. Example: "San Antonio"

### Feedback Examples

- gmscity get  
returns  
gmscity <empty>
- gmscity set Paris  
returns  
gmscity Paris
- gmscity get  
returns  
gmscity Paris

## gmscontactemail

Sets or gets the Global Management System contact email information.

### Syntax

```
gmscontactemail get
gmscontactemail set ["email"]
```

Parameter	Description
get	Returns the current contact email address.
set	Sets the Global Management system contact email address when followed by the "email" parameter. To erase the current setting, omit "email".
"email"	Alphanumeric string specifying the email address.

### Feedback Examples

- gmscontactemail get  
returns  
gmscontactemail <empty>
- gmscontactemail set john\_polycom@polycom.com  
returns  
gmscontactemail john\_polycom@polycom.com
- gmscontactemail get  
returns  
gmscontactemail john\_polycom@polycom.com

## gmscontactfax

Sets or gets the Global Management System contact fax information.

### Syntax

```
gmscontactfax get
gmscontactfax set ["fax number"]
```

Parameter	Description
get	Returns the current contact fax information.
set	Sets the Global Management System contact fax information when followed by the "fax number" parameter. To erase the current setting, omit "fax number".
"fax number"	Character string specifying the fax number. Enclose the string in quotation marks if it includes spaces. Example: "408 555 2323"

### Feedback Examples

- gmscontactfax get  
returns  
gmscontactfax <empty>
- gmscontactfax set "408 555 2323"  
returns  
gmscontactfax 4085552323
- gmscontactfax get  
returns  
gmscontactfax 4085552323

## gmscontactnumber

Sets or gets the Global Management System contact number information.

### Syntax

```
gmscontactnumber get
gmscontactnumber set ["number"]
```

Parameter	Description
get	Returns the current contact number.
set	Sets the Global Management System contact number when followed by the "number" parameter. To erase the current setting, omit "number".
"number"	Numeric string specifying the contact number. Enclose the string in quotation marks if it includes spaces. Example: "408 555 2323"

### Feedback Examples

- gmscontactnumber get  
returns  
gmscontactnumber <empty>
- gmscontactnumber set "408 555 2323"  
returns  
gmscontactnumber 4085552323
- gmscontactnumber get  
returns  
gmscontactnumber 4085552323

## gmscontactperson

Sets or gets the Global Management System contact person information.

### Syntax

```
gmscontactperson get
gmscontactperson set ["person"]
```

Parameter	Description
get	Returns the current contact person information.
set	Sets the Global Management System contact person name when followed by the "person" parameter. To erase the current setting, omit "person".
"person"	Character string specifying the contact person. Enclose the string in quotation marks if it includes spaces. Example: "Mary Pol ycom"

### Feedback Examples

- gmscontactperson get  
returns  
gmscontactperson <empty>
- gmscontactperson set "Mary Pol ycom"  
returns  
gmscontactperson "Mary Pol ycom"
- gmscontactperson get  
returns  
gmscontactnumber "Mary Pol ycom"

## gmscountry

Sets or gets the Global Management System country information.

### Syntax

```
gmscountry get
gmscountry set ["countryname"]
```

Parameter	Description
get	Returns the current country setting.
set	Sets the Global Management System country information when followed by the "countryname" parameter. To erase the current setting, omit "countryname".
"countryname"	Character string specifying the country. Enclose the string in quotation marks if it includes spaces. Example: "United States"

### Feedback Examples

- gmscountry get  
returns  
gmscountry <empty>
- gmscountry set Argentina  
returns  
gmscountry Argentina
- gmscountry get  
returns  
gmscountry Argentina

## gmsstate

Sets or gets the Global Management System state information.

### Syntax

```
gmsstate get
gmsstate set ["state"]
```

Parameter	Description
get	Returns the current state information.
set	Sets the Global Management System state information when followed by the "state" parameter. To erase the current setting, omit the "state" parameter.
"state"	Character string specifying the state information. Enclose the string in quotation marks if it includes spaces. Example: "West Virginia"

### Feedback Examples

- gmsstate get  
returns  
gmsstate <empty>
- gmsstate set Texas  
returns  
gmsstate Texas
- gmsstate get  
returns  
gmsstate Texas

## gmstechsupport

Sets or gets the Global Management System technical support phone number.

### Syntax

```
gmstechsupport get
gmstechsupport set ["tech_support_digits"]
```

Parameter	Description
get	Returns the current tech support phone number information.
set	Sets the technical support information when followed by the "tech_support_digits" parameter. To erase the current setting, omit "tech_support_digits".
"tech_support_digits"	Numeric string specifying the tech support phone number. Enclose the string in quotation marks if it includes spaces. Example: "408 555 2323"

### Feedback Examples

- gmstechsupport get  
returns  
gmstechsupport <empty>
- gmstechsupport set "408 555 2323"  
returns  
gmstechsupport 4085552323
- gmstechsupport get  
returns  
gmstechsupport 4085552323

## gmsurl

Gets the URL of the Global Management System server that manages your system. This command automatically appends "/pxx/vs\_status.asp".

### Syntax

```
gmsurl get {1..10}
gmsurl get all
```

Parameter	Description
get	Returns the current URL information for a selected server. A server must be specified.
{1..10}	Global Management System server number. The primary Global Management System server that performs account validation is always server 1.
all	Returns information for all Global Management System servers.

### Feedback Examples

- gmsurl get 1  
returns  
gmsurl 1 192.168.1.101/pxx/nx\_status.asp

### Comments

When you are registered with the Global Management System, this information is automatically configured.

## h239enable

Sets or gets the H.239 People+Content setting.

### Syntax

```
h239enable get
h239enable <yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Enables H.239 People+Content on the system.
no	Disables H.239 People+Content on the system.

### Feedback Examples

- h239enable yes  
returns  
h239enable yes
- h239enable no  
returns  
h239enable no
- h239enable get  
returns  
h239enable no

## h323name

Sets or gets the system's H.323 name.

### Syntax

```
h323name get
h323name set ["H. 323name"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the H.323 name when followed by the "H. 323name" parameter. To erase this setting, omit the "H. 323name" parameter.
"H. 323name"	Character string specifying the H.323 name. Use quotation marks around strings that contain spaces. For example: "Polycom HDX Demo"

### Feedback Examples

- h323name set My  
returns  
h323name my
- h323name set "Polycom HDX Demo"  
returns  
h323name "polycom hdx demo"
- h323name get  
returns  
h323name "polycom hdx demo"

## **h331audiomode**

Set or gets the audio protocol sent during H.331 calls. This command is only applicable if you have a V.35 network interface connected to your system.

### **Syntax**

```
h331audi omode
<get|g729|g728|g711u|g711a|g722-56|g722-48|g7221-16|g7221-24|
g7221-32|si ren14|si ren14stereo|off>
```

Parameter	Description
get	Returns the current setting.
g729 g728 g711u  g711a g722-56  g722-48 g7221-16  g7221-24 g7221-32  si ren14  si ren14stereo	Sets the audio protocol to this value for H.331 calls.
off	Turns audio mode off for H.331 calls.

### **Feedback Examples**

- h331audi omode g. 728  
returns  
h331audi omode g. 728
- h331audi omode "si ren 14"  
returns  
h331audi omode "si ren 14"
- h331audi omode off  
returns  
h331audi omode off

### **Comments**

This value cannot be changed during a call.

## **h331dualstream**

Set or gets the dual stream setting used for H.331 calls. This command is only applicable if you have a V.35 network interface connected to your system.

### **Syntax**

`h331dual stream <get|on|off>`

Parameter	Description
get	Returns the current setting.
on	Turns on dual stream for H.331 calls.
off	Turns off dual stream for H.331 calls.

### **Feedback Examples**

- `h331dual stream on`  
returns  
`h331dual stream on`
- `h331dual stream off`  
returns  
`h331dual stream off`
- `h331dual stream get`  
returns  
`h331dual stream off`

### **Comments**

This value cannot be changed during a call.

## h331framerate

Sets or gets the frame rate sent during H.331 calls. This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

```
h331framerate <get|30|15|10|7.5>
```

Parameter	Description
get	Returns the current setting.
30 15 10 7.5	Sets the frame rate to this value for H.331 calls.

### Feedback Examples

- h331framerate 15  
returns  
h331framerate 15
- h331framerate 30  
returns  
h331framerate 30
- h331framerate get  
returns  
h331framerate 30

### Comments

This value cannot be changed during a call.

## **h331videoformat**

Sets or gets the video format for H.331 calls. This command is only applicable if you have a V.35 network interface connected to your system.

### **Syntax**

`h331vi deoformat <get|fci f>`

Parameter	Description
get	Returns the current setting.
fci f	Sets the video format to FCIF for H.331 calls.

### **Feedback Examples**

- `h331vi deoformat fci f`  
returns  
`h331vi deoformat fci f`
- `h331vi deoformat get`  
returns  
`h331vi deoformat fci f`

## h331videoprotocol

Sets or gets the H.331 video protocol sent during H.331 calls. This command is only applicable if you have a V.35 network interface connected to your system.

### Syntax

```
h331vi deoprotocol <get|h264|h263+|h263|h261>
```

Parameter	Description
get	Returns the current setting.
h264 h263+ h263 h261	Sets the video protocol to this value for H.331 calls.

### Feedback Examples

- h331vi deoprotocol h264  
returns  
h331vi deoprotocol h264
- h331vi deoprotocol h263+  
returns  
h331vi deoprotocol h263+
- h331vi deoprotocol get  
returns  
h331vi deoprotocol h263+

### Comments

This value cannot be changed during a call.

## hangup

Hangs up the current video or phone call.

### Syntax

```
hangup phone
hangup video ["callid"]
hangup all
```

Parameter	Description
phone	Disconnects the current analog phone (audio-only) site.
video	Disconnects the current video call. If the "callid" parameter is omitted, the system disconnects all video far sites in the call.
all	Disconnects all video and audio sites in the call.

### Feedback Examples

- hangup video  
returns  
hangi ng up vi deo
- hangup video 42  
returns  
hangi ng up vi deo  
and disconnects the specified site, leaving other sites connected
- If callstate register is used for notifications,  
hangup video 42  
returns  
hangi ng up vi deo  
cleared: call [42]  
di al stri ng[IP: 192. 168. 1. 101 NAME: Polycom HDX Demo]  
ended: call [42]  
and disconnects the specified site, leaving other sites connected

### Comments

After sending the hangup command, feedback that the call has ended can take up to 15 seconds.

# history

Lists the last commands used in the current session.

## Syntax

hi story

## Feedback Examples

- hi story  
returns  
1 ipaddress set 192.168.1.101  
2 hostname set My  
3 lanport 100fdx  
4 callstate register  
5 lanport get  
6 history

## Comments

If more than 64 commands have been issued, only the last 64 are displayed, with the most recent always at the bottom.

## homecallquality

Sets or gets whether users are allowed to select the bandwidth for calls from the Place a Call screen.

### Syntax

```
homecallquality <get|yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Displays the Call Quality menu on the home Place a Call screen.
no	Removes the Call Quality menu from the Place a Call screen.

### Feedback Examples

- homecallquality yes  
returns  
homecallquality yes
- homecallquality no  
returns  
homecallquality no
- homecallquality get  
returns  
homecallquality no

## homemultipoint (deprecated)

Sets or gets whether users are allowed to access the multipoint dialing screen via a **Multipoint** button on the home screen. This command has been deprecated.

### Syntax

```
homemul ti poi nt <get|yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Displays the <b>Multipoint</b> button on the Home screen.
no	Removes the <b>Multipoint</b> button from the Home screen.

### Feedback Examples

- homemul ti poi nt yes  
returns  
homemul ti poi nt yes
- homemul ti poi nt no  
returns  
homemul ti poi nt no
- homemul ti poi nt get  
returns  
homemul ti poi nt no

### Comments

This option is only available if multipoint calling is enabled.

## homerecentcalls

Sets or gets whether users are allowed to access a list of recent calls made with the system by displaying the **Recent Calls** button on the Home screen.

### Syntax

```
homerecentcalls <get|yes|no>
```

Parameter	Description
get	Returns the current setting.
yes	Displays the <b>Recent Calls</b> button on the Home screen.
no	Removes the <b>Recent Calls</b> button from the Home screen.

### Feedback Examples

- homerecentcalls yes  
returns  
homerecentcalls yes
- homerecentcalls no  
returns  
homerecentcalls no
- homerecentcalls get  
returns  
homerecentcalls no

### Comments

This option is only available if the Call Detail Report option is enabled.

## homesystem

Sets or gets whether users are allowed to access the System screen by displaying the **System** button on the Home screen.

### Syntax

homesystem <get|yes|no>

Parameter	Description
get	Returns the current setting.
yes	Displays the <b>System</b> button on the Home screen.
no	Removes the <b>System</b> button from the Home screen.

### Feedback Examples

- homesystem yes  
returns  
homesystem yes
- homesystem no  
returns  
homesystem no
- homesystem get  
returns  
homesystem no

## homesystemname

Sets or gets whether to display the name of the system on the Home screen, above the PIP window.

### Syntax

homesystemname <get|yes|no>

Parameter	Description
get	Returns the current setting.
yes	Displays the system name on the Home screen.
no	Removes the system name from the Home screen.

### Feedback Examples

- homesystemname yes  
returns  
homesystemname yes
- homesystemname no  
returns  
homesystemname no
- homesystemname get  
returns  
homesystemname no

## hostname

Sets or gets the LAN host name, which is assigned to the system for TCP/IP configuration and can be used in place of an IP address when dialing IP calls.

### Syntax

```
hostname get
hostname set ["hostname"]
```

Parameter	Description
get	Returns the current setting.
set	Sets the system's LAN host name when followed by the "hostname" parameter. If "hostname" is omitted, the system automatically sets it to Admin.
"hostname"	Character string specifying the LAN host name of the system. The LAN host name follows these format rules: Starts with a letter (A-a to Z-z). It is not case sensitive. Ends with a letter (A-a to Z-z) or a number (0 to 9). May include letters, numbers, and a hyphen. May not be longer than 63 characters. Note: The LAN host name is initialized during the out-of-box setup sequence. The LAN host name is the same as the system name, if the system name conforms to the rules above. If the system name does not conform to these rules, the invalid characters are removed from the system name. If the resulting string is empty, the default LAN host name is Admin.

### Feedback Examples

- hostname set  
returns  
hostname ADMIN  
restart system for changes to take effect. restart now? <y, n>
- hostname set "My"  
returns  
hostname My  
restart system for changes to take effect. restart now? <y, n>
- hostname get  
returns  
hostname My

## **Comments**

A LAN host name is required; it cannot be deleted or left blank. After making a change, you must restart the system for the setting to take effect.

## icmpoutpacketrate

Specify minimum number of milliseconds between packets to limit the ICMP packet transmission rate.

### Syntax

```
i cmpoutpacketrate get
i cmpoutpacketrate set {0..60000}
```

Parameter	Description
get	Returns the minimum number of milliseconds between transmitted ICMP packets.
set	Sets the minimum number of milliseconds between transmitted ICMP packets.
{0..60000}	The packet rate. This must be an integer in the range {0..60000}. 1000=1 packet per second.

### Feedback Examples

- i cmpoutpacketrate get  
returns  
i cmpoutpacketrate 1000
- i cmpoutpacketrate set 1001  
returns  
i cmpoutpacketrate 1001

### Comments

Applicable for both IPv4 and IPv6 configurations. When 0 is specified, the ICMP packet transmission rate limit is turned off.

After making a change, you must restart the system for the setting to take effect.

### See Also

[destunreachabletx](#) on page 4-93.

## ignoreredirect

Sets or gets the ability of the system to redirect messages, which may come from a router as part of the IPv6 Neighbor Discovery protocol.

### Syntax

```
i gnoreredi rect get
i gnoreredi rect <yes | no>
```

Parameter	Description
get	Returns the current IPv6 ignore redirect setting.
yes	Enables the IPv6 ignore redirect setting.
no	Disables the IPv6 ignore redirect setting.

### Feedback Examples

- i gnoreredi rect get  
returns  
i gnoreredi rect no
- i gnoreredi rect set yes  
returns  
i gnoreredi rect yes

### Comments

This setting is applicable for both IPv4 and IPv6 configurations.

After making a change, you must restart the system for the setting to take effect.

# importdirectory

Imports a directory in CSV or XML format

## Syntax

```
importdirectory
<import data line 1>
<import data line 2>
<import data line 3>
.
.
.
importcomplete
```

## Feedback Examples

- ```
importdirectory
<?xml version="1.0" encoding="UTF-8" ?>
<addresses>
<entrytype type="entry" name="Polycom Austin USA IP"
filename="Polycom_Austin_USA_IP.abk"
uniqueid="Polycom_Austin_USA_IP.abk">
<address filename="Polycom_Austin_USA_IP.abk" langid=""
displayname="" name="Polycom Austin USA IP">
<h323 address="lobby.austin.polycom.com" speed="256"/>
</address>
</entrytype>
<entrytype type="entry" name="Polycom Hong Kong"
filename="Polycom_Hong_Kong.abk"
uniqueid="Polycom_Hong_Kong.abk">
<address filename="Polycom_Hong_Kong.abk" langid=""
displayname="" name="Polycom Hong Kong">
<isdn country_code="852" area_code="2876" numberA="9466"
numberB="9466" speed="2x64"/>
</address>
</addresses>
</xml>
importcomplete
returns
importdirectory succeeded
```
- ```
importdirectory
A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, AA, AB, A
C, AD, AE, AF, AG, AH, AI, AJ, AK, AL, AM, AN, AO, AP, AQ, AR, AS, AT, AU, AV,
AW, AX, AY, AZ, BA, BB, BC, BD, BE, BF, BG, BH, BI, BJ, BK, BL, BM, BN, BO, BP
, BQ, BR, BS, BT, BU, BV, BW, BX, BY, BZ, CA, CB
```

File Name, Entry Name, ISDN Country Code, ISDN Area Code, ISDN

## Comments

When importing XML-formatted data, the imported data must be in the same format as was obtained from the Polycom HDX system via the [exportdirectory](#) command on page [4-129](#) or the export directory utility in the web interface.

Duplicate entries are overwritten; other entries in the imported directory are added into the system's local directory.

All of the lines entered into the session after `importdirectory` is issued are interpreted as directory data.

Issuing the `importcomplete` command on its own line indicates that the directory import is complete.

If no data is received for 60 seconds during import, the import ends, and an "importdirectory timed out" error response is sent to the API session. All previous data entered is ignored.

Additional usage notes:

- Polycom HDX systems running software version 2.6 or later can import directory data exported from systems running version 2.6 and earlier versions.
- Polycom HDX systems running software versions earlier than 2.6 cannot import directory data exported by systems running software version 2.6 or later.

## See Also

See the [exportdirectory](#) command on page [4-129](#).

## importprofile

Imports system and user profile information in a CSV format. The input is submitted through the telnet or serial port.

### Syntax

```
importprofile
<import data line 1>
<import data line 2>
<import data line 3>
.
importcomplete
```

### Feedback Examples

```
importprofile
h323name, s8w
hdaccel erator, BrutusT
avayaenabl ed, ""
systemsoftwareversi on_prev, 2. 6. 0
ipmaxi ncomi ng, 4096

di al numberext, ""
mp8enabl ed, ""
lastlogi nfromadmi n, Local
timezone, CST
presence, AVAI LABLE
profil echecksum, 16813327827
importcomplete

importprofile succeeded
```

### Comments

When importing profile data, the imported data must be in the same format as was obtained from the Polycom HDX system via the [exportprofile](#) command on page [4-131](#) or the export profile utility in the web interface. When

importing profile data back into the system, use the data in its entirety (not edited in any form). The system may use the checksum utility to verify of integrity of the data when imported back into the system.

`importprofile succeeded` is returned to indicate that the profile data has been imported.

A reboot of the system is required after successfully importing system and user profile information and will occur automatically after the import is complete.

## See Also

See the [exportprofile](#) command on page 4-131.

## incompletrevocationcheck

Sets or gets the ability to use or reject a certificate if revocation checking is incomplete.

### Syntax

```
i ncompl eterevocati oncheck get
i ncompl eterevocati oncheck set <yes|no>
```

Parameter	Description
get	Returns the current setting.
set	Sets the certificate validation setting.
yes	Allows the system to continue to use a certificate in some cases if revocation checking is incomplete.
no	Rejects a certificate with incomplete revocation checking.

### Feedback Examples

- i ncompl eterevocati oncheck get  
returns  
i ncompl eterevocati oncheck yes
- i ncompl eterevocati oncheck set yes  
returns  
i ncompl eterevocati oncheck yes
- i ncompl eterevocati oncheck set no  
returns  
i ncompl eterevocati oncheck no

### Comments

After making a change, you must restart the system for the setting to take effect.

## ipaddress

Sets or gets the LAN IP address (IPv4) of the system.

### Syntax

```
i paddress get
i paddress set "xxx. xxx. xxx. xxx"
```

Parameter	Description
get	Returns the current setting.
set	Sets the LAN IP address to the "xxx. xxx. xxx. xxx" parameter. This setting can only be changed when DHCP is off.
"xxx. xxx. xxx. xxx"	IP address of the system.

### Feedback Examples

- i paddress set 192. 168. 1. 101  
returns  
i paddress 192. 168. 1. 101
- i paddress get  
returns  
i paddress 192. 168. 1. 101

### Comments

Use this command when you need to allocate a static IP address to your system. After making a change, you must restart the system for the setting to take effect.

## ipdialspeed

Sets or gets the valid IP dialing speed, and enables or disables the specified speed.

### Syntax

```
i pdi al speed get "val i d speed"
i pdi al speed set "val i d speed" <on|off>
```

Parameter	Description
get	Returns the current setting. The parameter "val i d speed" is required.
"val i d speed"	Valid speeds are: 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 1792, 1856, 1920, 1960, 1984, 2016, 2048, 2304, 2560, 2816, 3072, 3328, 3584, 3840, and 4096 kbps.
set	Sets the IP dialing speed. The parameters "val i d speed" and on or off are required.
on	Enables the specified speed.
off	Disables the specified speed.

### Feedback Examples

- ipdialspeed set 168 on  
returns  
i pdi al speed set 168 on
- ipdialspeed set 168 off  
returns  
i pdi al speed set 168 off
- ipdialspeed get 168  
returns  
i pdi al speed 168 off

## Comments

The Polycom HDX system does not support separate settings for IP and ISDN dialing speeds. When you change a setting using this command, the settings associated with the [isdn dialspeed](#) command on page [4-207](#) also change, and vice versa.

## ipisdninfo

Sets or gets whether the Home screen displays IP information, ISDN information, both, or neither.

### Syntax

i pi sdni nfo <get|both|i p-onl y|i sdn-onl y|none>

Parameter	Description
get	Returns the current setting.
both	Displays IP and ISDN information on the Home screen.
i p-onl y	Displays only IP information on the Home screen.
i sdn-onl y	Displays only ISDN information on the Home screen.
none	Does not display any IP or ISDN information on the Home screen.

### Feedback Examples

- i pi sdni nfo i p-onl y  
returns  
i pi sdni nfo i p-onl y
- i pi sdni nfo both  
returns  
i pi sdni nfo both
- i pi sdni nfo get  
returns  
i pi sdni nfo both

## ipprecaudio, ipprecfecc, ipprecvideo

Sets or gets the IP Precedence priority level (Type of Service Value) for audio, far-end camera control (FECC) and other call control channels, and video. The value for each can be between 0 and 7.

### Syntax

```
ipprecaudi o get
ipprecaudi o set {0..7}
ipprecfecc get
ipprecfecc set {0..7}
ipprecvi deo get
ipprecvi deo set {0..7}
```

Parameter	Description
get	Returns the current setting.
set	Sets the IP precedence. A priority level is required. This must be an integer in the range {0..7}.

### Feedback Examples

- `ipprecaudi o set 5`  
returns  
`ipprecaudi o 5`
- `ipprecaudi o get`  
returns  
`ipprecaudi o 5`

### Comments

The ipprecfecc command is equivalent to the Control setting in the user interface.

If the [typeofservice](#) command on page 4-331 is set to `diffserv`, these commands are not applicable.

## ipv6addrmode

Sets or gets the ability for the system to act as a client and receive an address, specify an address manually, or completely disable IPv6.

### Syntax

```
ipv6addrmode <get|client|manual|off>
```

Parameter	Description
get	Returns the current setting.
client	IPv6 addresses from network elements.
manual	Allows full configuration of IPv6 addresses.
off	Disables IPv6 addressing.

### Feedback Examples

- `ipv6addrmode get`  
returns  
`ipv6addrmode client`
- `ipv6addrmode off`  
returns  
`ipv6globaladdress off`

### Comments

This setting is applicable for both IPv4 and IPv6 configurations.

After making a change, you must restart the system for the setting to take effect.

# ipv6globaladdress

Sets or gets the IPv6 link global address.

## Syntax

```
i pv6gl obal address get
i pv6gl obal address set "i pv6 gl obal address"
```

Parameter	Description
get	Returns the current setting.
set	Sets the IPv6 global address.
i pv6 link gl obal address	The local IPv6 global address.

## Feedback Examples

- i pv6gl obal address get  
returns  
i pv6gl obal address 2002: ac1a: 140: 0: 2e0: dbff: fe08: a03a/64
- i pv6gl obal address set 2002: ac1a: 140: 0: 2e0: dbff: fe08: a03a/64  
returns  
i pv6gl obal address 2002: ac1a: 140: 0: 2e0: dbff: fe08: a03a/64

## Comments

After making a change, you must restart the system for the setting to take effect. This setting can be changed only when `i pv6addrmode` is set to **manual**.

## See Also

[ipv6addrmode](#) on page 4-198

## ipv6defaultgateway

Sets or gets the IPv6 default gateway.

### Syntax

```
i pv6defaul tgateway get
i pv6defaul tgateway set "i pv6 link local address"
```

Parameter	Description
get	Returns the current setting.
set	Sets the IPv6 default gateway.
i pv6 defaul t gateway	The local IPv6 default gateway.

### Feedback Examples

- i pv6defaul tgateway get  
returns  
i pv6defaul tgateway fe80::213:ffff:fe2f:2e4a
- i pv6defaul tgateway set fe80::213:ffff:fe2f:2e4a  
returns  
i pv6defaul tgateway fe80::213:ffff:fe2f:2e4a

### Comments

After making a change, you must restart the system for the setting to take effect. This setting can be changed only when *i pv6addrmode* is set to **manual**.

### See Also

[i pv6addrmode](#) on page 4-198

## ipv6linklocal

Sets or gets the IPv6 link local address.

### Syntax

```
i pv6l i nkI ocal get
i pv6l i nkI ocal set "i pv6 l ink l ocal address"
```

Parameter	Description
get	Returns the current setting.
set	Sets the IPv6 link local address.
i pv6 l ink l ocal address	The local IPv6 link local address.

### Feedback Examples

- i pv6l i nkI ocal get  
returns  
i pv6l i nkI ocal fe80: : 2e0: dbff: fe08: a03a/64
- i pv6l i nkI ocal set fe80: : 2e0: dbff: fe08: a03a/64  
returns  
i pv6l i nkI ocal fe80: : 2e0: dbff: fe08: a03a/64

### Comments

After making a change, you must restart the system for the setting to take effect. This setting can be changed only when i pv6addrmode is set to **manual**.

### See Also

[ipv6addrmode](#) on page 4-198

## ipv6sitelocal

Sets or gets the IPv6 site local address.

### Syntax

```
i pv6si tel ocal get
i pv6si tel ocal set "i pv6 si te l ocal address"
```

Parameter	Description
get	Returns the current setting.
set	Sets the IPv6 site local address.
i pv6 si te l ocal address	The local IPv6 site local address.

### Feedback Examples

- i pv6si tel ocal get  
returns  
i pv6si tel ocal fed0:0:140:1:2e0:dbff:fe08:a03a/64
- i pv6si tel ocal set fed0:0:140:1:2e0:dbff:fe08:a03a/64  
returns  
i pv6si tel ocal fed0:0:140:1:2e0:dbff:fe08:a03a/64

### Comments

After making a change, you must restart the system for the setting to take effect. This setting can be changed only when i pv6addrmode is set to manual.

### See Also

[ipv6addrmode](#) on page 4-198.

## ipstat

Returns the LAN host name, WINS resolution, DHCP, IP address, DNS servers 1-4, default gateway, WINS server, and subnet mask.

### Syntax

ipstat

### Feedback Examples

- ipstat  
returns  
hostname My  
winsresolution no  
dhcpclient  
ipaddress 192.168.1.101  
dnsserver 192.168.1.102  
dnsserver1 192.168.1.103  
dnsserver2 192.168.1.104  
dnsserver3 0.0.0.0  
defaultgateway 192.168.1.105  
subnetmask 255.255.255.0  
winnsserver 192.168.1.106  
lanport auto  
webaccessport 80

## isdnareacode

Sets or gets the ISDN area code or STD code associated with the area where the system is used. This command is only applicable if you have an ISDN network interface connected to your system.

### Syntax

```
i sdnareacode get
i sdnareacode set ["area code"]
```

Parameter	Description
get	Returns the area code information.
set	Sets the ISDN area code when followed by the "area code" parameter. To erase the current setting, omit "area code".
"area code"	Numeric value.

### Feedback Examples

- i sdnareacode set 700  
returns  
i sdnareacode 700
- i sdnareacode get  
returns  
i sdnareacode 700

## isdnccountrycode

Sets or gets the ISDN country code associated with the country where the system is used. This command is only applicable if you have an ISDN network interface connected to your system.

### Syntax

```
i sdncountrycode get
i sdncountrycode set ["country code"]
```

Parameter	Description
get	Returns the country code information.
set	Sets the ISDN country code when followed by the "country code" parameter. To erase the current setting, omit "country code".
"country code"	The ISDN country code.

### Feedback Examples

- i sdncountrycode set 1  
returns  
i sdncountrycode 1
- i sdncountrycode get  
returns  
i sdncountrycode 1

### Comments

The system is generally able to automatically determine the country code based on the country you selected during initial system setup.

## isdn dialing prefix

Sets or gets the ISDN dialing prefix used to access an outside line if the system is behind a PBX. This command is only applicable if you have an ISDN network interface connected to your system.

### Syntax

```
i sdndial i ngprefi x get
i sdndial i ngprefi x set ["i sdn prefi x"]
```

Parameter	Description
get	Returns the dialing prefix.
set	Sets the ISDN prefix when followed by the "i sdn prefi x" parameter. To erase the current setting, omit "i sdn prefi x".
"i sdn prefi x"	The digit(s) that must be dialed to reach an outside line.

### Feedback Examples

- i sdndial i ngprefi x set 9  
returns  
i sdndial i ngprefi x 9
- i sdndial i ngprefi x get  
returns  
i sdndial i ngprefi x 9

## isdn dial speed

Sets or gets the valid dialing speed of the ISDN network interface. This command only applies if an ISDN network interface is connected to a system.

### Syntax

```
isdn dial speed get "valid speed"
isdn dial speed set "valid speed" <on|off>
```

Parameter	Description
get	Returns the current setting. The parameter "valid speed" is required.
set	Sets the ISDN dialing speed. The parameters "valid speed" and on or off are required.
"valid speed"	Valid speeds are: 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 1792, 1856, and 1920 kbps. Note: The highest speed for BRI systems is 512 kbps, the highest speed for T1 systems is 1472 kbps, and the highest speed for E1 systems is 1920 kbps.
on	Enables the specified speed.
off	Disables the specified speed.

### Feedback Examples

- ```
isdn dial speed set 256 on
returns
isdn dial speed set 256 on
```
- ```
isdn dial speed set 168 off
returns
isdn dial speed set 168 off
```
- ```
isdn dial speed get 168
returns
isdn dial speed 168 off
```

Comments

The Polycom HDX system does not support separate settings for ISDN and IP dialing speeds. When you change a setting using this command, the settings associated with the [ipdialspeed](#) command on page [4-194](#) also change, and vice versa.

isdnnum

Sets or gets the ISDN video number or numbers assigned to the system. This command is only applicable if you have an ISDN network interface connected to your system.

Syntax

```
i sdnnnum get <1b1|1b2|2b1|2b2|3b1|3b2|4b1|4b2>
i sdnnnum set <1b1|1b2|2b1|2b2|3b1|3b2|4b1|4b2> ["number"]
```

| Parameter | Description |
|---------------------------------|---|
| get | Returns the current ISDN number associated with the specified B channel. |
| set | Sets the ISDN number for a B channel line when followed by the "number" parameter. To erase the current setting, omit "number". This parameter is not allowed while in a call. |
| 1b1 1b2 2b1 2b2 3b1 3b2 4b1 4b2 | The line and B channel. Valid values are:
1b1BRI line 1, B channel 1
1b2BRI line 1, B channel 2
2b1BRI line 2, B channel 1
2b2BRI line 2, B channel 2
3b1BRI line 3, B channel 1
3b2BRI line 3, B channel 2
4b1BRI line 4, B channel 1
4b2BRI line 4, B channel 2 |
| "number" | The ISDN number(s) provided by your network service provider for the specified B channel. |

Feedback Examples

- i sdnnnum set 1b1 "700 555 1212"
returns
i sdnnnum 1b1 7005551212
- i sdnnnum get 1b1
returns
i sdnnnum 1b1 7005551212

Comments

The isdnnum set 1b1 and isdnnum get 1b1 commands can be used for BRI and for PRI lines.

isdnswitch

Sets or gets the ISDN switch protocol. This command is only applicable if you have an ISDN network interface connected to your system.

Syntax

```
i sdnswi tch get
i sdnswi tch <pt-to-pt_at&t_5_ess|mul ti poi nt_at&t_5_ess|ni -1>
i sdnswi tch <nortel _dms-100|standard_etsi _euro-i sdn|ts-031|ntt_i ns-64>
```

| Parameter | Description |
|---|--|
| get | Returns the current switch protocol. |
| pt-to-pt_at&t_5_ess mul ti poi nt_at&t_5_ess ni -1 nortel _dms-100 standard_etsi _euro-i sdn ts-031 ntt_i ns-64 | Specifies the ISDN switch protocol to use. |

Feedback Examples

- i sdnswi tch pt-to-pt_at&t_5_ess
returns
i sdnswi tch pt-to-pt_at&t_5_ess
- i sdnswi tch nortel_dms-100
returns
i sdnswi tch nortel_dms-100
- i sdnswi tch get
returns
i sdnswi tch nortel_dms-100

Comments

If more than one switch protocol is supported, you must find out from your telephone service provider which protocol to select. If you change the country settings, a new set of ISDN switch protocols is loaded.

See Also

To set the switch type for PRI systems, use the [priswitch](#) command on page [4-281](#).

keypadaudioconf

Sets or gets the keypad audio confirmation. When this option is enabled, an audio response is echoed when a numeric key is pressed on the remote control.

Syntax

```
keypadaudi oconf <get | yes | no>
```

| Parameter | Description |
|-----------|------------------------------|
| get | Returns the current setting. |
| yes | Enables audio confirmation. |
| no | Disables audio confirmation. |

Feedback Examples

- keypadaudi oconf yes
returns
keypadaudi oconf yes
- keypadaudi oconf no
returns
keypadaudi oconf no
- keypadaudi oconf get
returns
keypadaudi oconf no

language

Sets or gets the language that will display on the system.

Syntax

```
I language <set|get>
I language set <arabi c|chi nese|engl i shuk|engl i shus|french|german|
hungari an|i tal i an|j apanese|korean|norwegi an|pol i sh|portuguese|
russi an|spani sh|tradi ti onal _chi nese>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current language used on the system. |
| set | Sets the specified language. Requires a language parameter. |

Feedback Examples

- I language set german
returns
I language german
- I language get
returns
I language german

lanport

Sets or gets the LAN port settings of the system.

Syntax

I lanport

<get|auto|autohdx|autofdx|10hdx|10fdx|100hdx|100fdx|1000hdx|1000fdx>

| Parameter | Description |
|--|--|
| get | Returns the current setting. |
| auto autohdx autofdx 10hdx 10fdx 100hdx 100fdx 1000hdx 1000fdx | <p>Sets the LAN speed and duplex mode. This parameter is not allowed while in a call.</p> <p>auto: Automatically negotiates the LAN speed and duplex mode.</p> <p>autohdx: Automatically negotiates the LAN speed but specifies half-duplex mode.</p> <p>autofdx: Automatically negotiates the LAN speed but specifies full-duplex mode.</p> <p>10hdx: 10 Mbps, half duplex</p> <p>10fdx: 10 Mbps, full duplex</p> <p>100hdx: 100 Mbps, half duplex</p> <p>100fdx: 100 Mbps, full duplex</p> <p>1000hdx: 1000 Mbps, half duplex</p> <p>1000fdx: 1000 Mbps, full duplex</p> |

Feedback Examples

- I lanport auto
returns
I lanport auto
restart system for changes to take effect. restart now? <y, n>
- I lanport get
returns
I lanport auto

Comments

After making a change, you are prompted to restart the system.

Idapauthenticationtype

Sets or gets the authentication type required to authenticate with an LDAP server.

Syntax

```
Idapauthenticationtype get
Idapauthenticationtype set <anonymous|basic|ntlm>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| set | Sets the authentication type of an LDAP server.
Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| anonymous | Specifies “anonymous” as the authentication type of an LDAP server. |
| basic | Specifies “basic” as the authentication type of an LDAP server. |
| ntlm | Specifies “ntlm” as the authentication type of an LDAP server. This is the default setting. |

Feedback Examples

- `Idapauthenticationtype get`
returns
`Idapauthenticationtype anonymous`
- `Idapauthenticationtype set basic`
returns
`Idapauthenticationtype basic`
- `Idapauthenticationtype set ntlm`
returns
`Idapauthenticationtype ntlm`

Idapbasedn

Sets or gets the base distinguished name (DN) of an LDAP server.

Syntax

```
I dapbasedn get
I dapbasedn set ["base dn"]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the base DN of an LDAP server. To erase the current setting, omit the "base dn" parameter.
Notes: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "base dn" | Specifies the base DN of an LDAP server.
Valid characters include:
Unicode (ISO-10646) characters, including IA5/ASCII characters and extended characters such as é, Ø, and å. |

Feedback Examples

- I dapbasedn get
returns
I dapbasedn dc=hardware, dc=domain, dc=Polycom, dc=com
where:
dc=domain component
- I dapbasedn set dc=software, dc=domain, dc=Polycom, dc=com
returns
I dapbasedn dc=software, dc=domain, dc=Polycom, dc=com
where:
dc=domain component

ldapbinddn

Sets or gets the bind DN for LDAP Simple Authentication.

Syntax

```
I dapbi nddn get
I dapbi nddn set ["bi nd dn"]
```

| Parameter | Description |
|------------|--|
| get | Returns the current setting. |
| set | Sets the bind DN for LDAP Simple Authentication. To erase the current setting, omit the "bi nd dn" parameter.

Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "bi nd dn" | Specifies the bind DN of an LDAP server.

Valid characters include:

Unicode (ISO-10646) characters, including IA5/ASCII characters and extended characters such as é, Ø, and å. |

Feedback Examples

- I dapbi nddn get
returns
I dapbi nddn cn=pl cm admni n1, ou=pl cmsupport, ou=pl cmhel p, dc=hardware, dc=domain, dc=pol ycom, dc=com
where:
cn=common name
ou=organizational unit
dc=domain component
- I dapbi nddn set cn=pl cm
admni n2, ou=pl cmaccounts, ou=pl cmservi ce, dc=hardware, dc=domain, dc=pol ycom, dc=com
returns
I dapbinddn cn=pl cm admni n2, ou=pl cmaccounts, ou=pl cmservi ce, dc=hardware, dc=domain, dc=pol ycom, dc=com
where:
cn=common name
ou=organizational unit
dc=domain component

ldapdirectory

Sets or gets whether the LDAP directory server is enabled.

Syntax

```
ldapdirectory <get|yes|no>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| yes | Enables the LDAP directory server. |
| no | Disables the LDAP directory server. This is the default setting. |

Feedback Examples

- ```
ldapdirectory get
```

  
returns  

```
ldapdirectory yes
```
- ```
ldapdirectory no
```

returns

```
ldapdirectory no
```

Comments

Each Polycom system supports a single global directory server at any given time. Therefore, enabling the LDAP directory server automatically disables any other global directory server, such as the Polycom GDS directory server, that is enabled.

If the Polycom GDS directory server and another directory server are defined on the system, the Polycom GDS directory server becomes the default directory server after upgrading the system software.

Idapntlmdomain

Sets or gets the domain in which authentication takes place in the Active Directory server.

Syntax

```
Idapntlmdomain get
Idapntlmdomain set ["domain"]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the domain in which authentication takes place in the Active Directory server. To erase the current setting, omit the "domain" parameter.

Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "domain" | Specifies the domain in which authentication takes place in the Active Directory server.

Valid characters include:
0 through 9, a through z, A through Z,
hyphen (-), and period (.)

Note: The domain name cannot begin or end with a hyphen or a period. |

Feedback Examples

- `Idapntlmdomain get`
returns
`Idapntlmdomain AUSTIN`
- `Idapntlmdomain set ANDOVER`
returns
`Idapntlmdomain ANDOVER`

Idappassword

Sets the password for Simple or NT LAN Manager (NTLM) authentication of an LDAP server.

Syntax

```
I dappassword set <ntlm|basic> ["password"]
```

| Parameter | Description |
|------------|--|
| set | Sets the password for Simple or NTLM authentication of an LDAP server. To erase the current setting, omit the "password" parameter.

Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| ntlm | Specifies setting the password for NTLM authentication of an LDAP server. |
| basic | Specifies setting the password for Simple authentication of an LDAP server. |
| "password" | Specifies the password for Simple or NTLM authentication of an LDAP server.

Valid characters include:
Unicode (ISO-10646) characters, including IA5/ASCII characters and extended characters such as é, Ø, and å.

Note: The server administrator may specify additional restrictions for password creation. |

Feedback Examples

- I dappassword set ntlm P! cmp@s5wd
returns
I dappassword ntlm P! cmp@s5wd
- I dappassword set basic P0! yc0mp@s5
returns
I dappassword basic P0! yc0mp@s5

ldapserveraddress

Sets or gets the LDAP server address.

Syntax

```
I dapserveraddress get
I dapserveraddress set ["address"]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the IP address or the DNS name of an LDAP server. To erase the current setting, omit the "address" parameter.

Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "address" | Specifies the IP address or the DNS name of an LDAP server.

The DNS name requires alphanumeric characters. Valid characters include:
0 through 9
a through z
A through Z
-

Note: The "-" character cannot be used as the first or last character in the DNS name. |

Feedback Examples

- I dapserveraddress get
returns
I dapserveraddress hardware.domain.polycom.com
- I dapserveraddress set software.domain.polycom.com
returns
I dapserveraddress software.domain.polycom.com

ldapserverport

Sets or gets the port number of an LDAP server.

Syntax

```
I dapserverport get  
I dapserverport set ["port number"]
```

| Parameter | Description |
|---------------|--|
| get | Returns the current setting. |
| set | Sets the port number of an LDAP server. To erase the current setting, omit the "port number" parameter.
Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "port number" | Specifies the port number of an LDAP server. The default setting is 389. |

Feedback Examples

- I dapserverport get
returns
I dapserverport 389
- I dapserverport set 636
returns
I dapserverport 636

ldapsslEnabled

Sets or gets the Secure Sockets Layer (SSL)/Transport Layer Security (TLS) encryption state for LDAP operations.

Syntax

```
I dapssl enabled get  
I dapssl enabled set [on|off]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the SSL encryption state for LDAP operations.
Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| on | Specifies "on" as the encryption state for LDAP operations. This is the default setting. |
| off | Specifies "off" as the encryption state for LDAP operations. |

Feedback Examples

- I dapssl enabled get
returns
I dapssl enabled off
- I dapssl enabled set on
returns
I dapssl enabled on

ldapusername

Sets or gets the user name for NTLM authentication of an LDAP server.

Syntax

```
I dapusername get
I dapusername set ["user name"]
```

| Parameter | Description |
|-------------|--|
| get | Returns the current setting. |
| set | Sets the user name for NTLM authentication of an LDAP server. To erase the current setting, omit the "user name" parameter.

Note: This parameter does not change the setting on the server. Instead, this parameter changes how the Polycom system recognizes the server. |
| "user name" | Specifies the user name for NTLM authentication of an LDAP server.

Valid characters include:
Unicode (ISO-10646) characters, including IA5/ASCII characters and extended characters such as é, Ø, and å. |

Feedback Examples

- I dapusername get
returns
I dapusername j pol ycom
- I dapusername set mpol ycom
returns
I dapusername mpol ycom

linestate

Sets or gets API session registration to receive notifications about IP or ISDN line state changes.

Syntax

```
linestate get  
linestate <register|unregister>
```

| Parameter | Description |
|------------|---|
| get | Returns the current setting. |
| register | Registers to receive notification when IP or ISDN line states change. |
| unregister | Unregisters to receive notification when IP or ISDN line states change. |

Feedback Examples

- linestate register
returns
linestate registered
- linestate unregister
returns
linestate unregistered
- linestate get
returns
linestate unregistered

Comments

IP line state changes are only received in a serial API session.

listen

Registers the RS-232 session to listen for incoming video calls, phone calls, or system sleep or awake state and, consequently, to give notification when the registered state occurs.

Syntax

`listen <video|phone|sleep>`

| Parameter | Description |
|-----------|--|
| video | Instructs the session to listen for incoming video calls. When this event occurs, the message "listen video ringing" is received. |
| phone | Instructs the session to listen for incoming phone calls. When this event occurs, the message "listen phone ringing" is received. |
| sleep | Instructs the session to listen for when the system goes into sleep mode. When this event occurs, the message "listen going to sleep" is received. When the system wakes up, the message "listen waking up" is received. Deprecated. Polycom recommends using <code>sleep register</code> instead of this command. |

Feedback Examples

- `listen sleep`
returns
`listen sleep registered`
to acknowledge that the session is now registered to listen for sleep mode
- `listen phone`
returns
`listen phone registered`
to acknowledge that the session is now registered to listen for incoming phone calls
- `listen video`
returns
`listen video registered`
to acknowledge that the session is now registered to listen for incoming video calls

localdatetime

Sets or gets whether to display the local date and time on the Home screen.

Syntax

localdatetime <get|yes|no>

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Displays the local date and time on the Home screen. |
| no | Removes the local date and time from the Home screen. |

Feedback Examples

- localdatetime yes
returns
localdatetime yes
- localdatetime no
returns
localdatetime no
- localdatetime get
returns
localdatetime no

loginwindowduration

Sets or gets the duration of time within which failed logins can lead to account lockout.

Syntax

`Logi nwi ndowduration <get|set>`

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the time window within which failed logins can lead to account lockout. Time is measured in hours. Valid values are: off and {1..24} |

Feedback Examples

- `Logi nwi ndowduration get`
returns
`Logi nwi ndowduration 2`
- `Logi nwi ndowduration set 1`
returns
`Logi nwi ndowduration 1`
- `Logi nwi ndowduration set off`
returns
`Logi nwi ndowduration off`

Comments

- When the HDX system is powered off, the time window within which failed logins can lead to account lockout is still in effect.
- Login window duration begins at the first failed login attempt and lasts until the login window duration expires or the user successfully logs in.
- If `Logi nwi ndowduration` is set to off, the user is locked out after consecutive failures regardless of the time window.

marqueedisplaytext

Sets or gets the text to display in the dialing entry field on the Place a Call screen.

Syntax

```
marqueedi spl aytext get  
marqueedi spl aytext set "text"
```

| Parameter | Description |
|-----------|--|
| get | Returns the current marquee display text. |
| set | Sets the text to display in the dialing entry field followed by the text to use. Enclose the string in quotation marks if it includes spaces. |
| "text" | Text to display. Enclose the character string in quotation marks if it includes spaces. If "text" is omitted, the system automatically sets it to Welcome. |

Feedback Examples

- `marqueedi spl aytext set "Select an entry from the directory."`
returns
`marqueedi spl aytext "Select an entry from the directory."`
- `marqueedi spl aytext get`
returns
`marqueedi spl aytext "Select an entry from the directory."`

maxgabi nternati onal cal l speed

Sets or gets the maximum speed for international ISDN calls made from the global directory. This command is only applicable if you have an ISDN network interface connected to your system.

Syntax

```
maxgabi nternati onal cal l speed get  
maxgabi nternati onal cal l speed set "val i d speed"
```

| Parameter | Description |
|-----------------|--|
| get | Returns the current valid speed. |
| set | Sets the maximum speed for international calls when followed by a valid speed value. |
| "val i d speed" | Valid speeds are: 2x64, 128, 256, 384, 512, 768, 1024, and 1472 kbps. |

Feedback Examples

- maxgabi nternati onal cal l speed set 128
returns
maxgabi nternati onal cal l speed 128
- maxgabi nternati onal cal l speed get
returns
maxgabi nternati onal cal l speed 128

maxgabinternetcallspeed

Sets or gets the maximum speed for Internet (IP/H.323) calls made from the global directory.

Syntax

```
maxgabi nternetcal l speed get  
maxgabi nternetcal l speed set "val i d speed"
```

| Parameter | Description |
|-----------------|---|
| get | Returns the current valid speed. |
| set | Sets the maximum speed for Internet calls when followed by a valid speed value. |
| "val i d speed" | Valid speeds are: 128, 256, 384, 512, 768, 1024, and 1472 kbps. |

Feedback Examples

- maxgabi nternetcal l speed set 384
returns
maxgabi nternetcal l speed 384
- maxgabi nternetcal l speed get
returns
maxgabi nternetcal l speed 384

maxgabisdnCallspeed

Sets or gets the maximum speed for ISDN (H.320) calls made from the global directory. This command is only applicable if you have an ISDN network interface connected to your system.

Syntax

```
maxgabi sdncal l speed get  
maxgabi sdncal l speed set "val i d speed"
```

| Parameter | Description |
|-----------------|---|
| get | Returns the current valid speed. |
| set | Sets the maximum speed for ISDN calls when followed by a valid speed value. |
| "val i d speed" | Valid speeds are: 56, 64, 128, 256, 384, 512, 768, 1024, and 1472 kbps. |

Feedback Examples

- maxgabi sdncal l speed set 384
returns
maxgabi sdncal l speed 384
- maxgabi sdncal l speed get
returns
maxgabi sdncal l speed 384

maxtimeincall

Sets or gets the maximum number of minutes allowed for call length.

Syntax

```
maxtimeincall get
maxtimeincall set [{0..999}]
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| set | Sets the maximum time for calls when followed by a parameter from {0..999}. To erase the current setting, omit the time parameter or set it to 0. The call will then stay up indefinitely. |
| {0..999} | Maximum call time in minutes. Must be an integer in the range {0..999}. |

Feedback Examples

- maxtimeincall set
returns
maxtimeincall <empty>
- maxtimeincall set 180
returns
maxtimeincall 180
- maxtimeincall get
returns
maxtimeincall 180

Comments

When the time has expired in a call, a message asks you if you want to hang up or stay in the call. If you do not answer within one minute, the call automatically disconnects.

mcupassword

Enters and sends the MCU password to the MCU.

Syntax

mcupassword ["password"]

| Parameter | Description |
|-----------|--|
| password | Specifies the password to send to the MCU. |

meetingpassword

Sets the meeting password.

Syntax

```
meetingpassword set ["password"]
```

| Parameter | Description |
|------------|--|
| set | Sets the meeting password if followed by the password parameter. To erase the current setting, omit the password parameter. |
| "password" | User-defined password. Valid characters are: A through Z (lower and uppercase), -, _, @, /, ;, ., ., \, and 0 through 9. The length is limited to 33 characters. The password cannot include spaces. |

Feedback Examples

- meetingpassword set psswd
returns
meetingpassword psswd
- meetingpassword set "My psswd"
returns
error: command has illegal parameters

Comments

To receive a notification that the password has failed, you must use the `popupinfo register` command to register the current API session to receive `popup` text.

See also the related [popupinfo](#) command on page [4-268](#).

monitor1 (deprecated)

Sets or gets the aspect ratio for Monitor 1. With the implementation of the [configdisplay](#) command on page 4-77, this command has been deprecated.

Syntax

```
moni tor1 <get|4:3|16:9|vga>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| 4:3 16:9 | Sets the display aspect ratio to 4:3 (standard) or 16:9 (wide screen). |
| vga | Sets the display to VGA and causes the system to restart. |

Feedback Examples

- moni tor1 4:3
returns
moni tor1 4:3
- moni tor1 16:9
returns
moni tor1 16:9
- moni tor1 get
returns
moni tor1 16:9

See Also

See the [configdisplay](#) command on page 4-77.

monitor1screensaveroutput

Sets or gets whether to send either black video or "No Signal" to Monitor 1 when the screen saver activates.

Syntax

```
moni tor1screensaveroutput <get|bl ack|no_si gnal >
```

| Parameter | Description |
|------------|--|
| get | Returns the current setting. |
| bl ack | Sends black video to Monitor 1 when the system goes to sleep and the screen saver activates. |
| no_si gnal | Sends no signal to Monitor 1 when the system goes to sleep and the screen saver activates. |

Feedback Examples

- moni tor1screensaveroutput bl ack
returns
moni tor1screensaveroutput bl ack
- moni tor1screensaveroutput no_si gnal
returns
moni tor1screensaveroutput no_si gnal
- moni tor1screensaveroutput get
returns
moni tor1screensaveroutput no_si gnal

See Also

See the [monitor2screensaveroutput](#) command on page [4-238](#).

monitor2 (deprecated)

Sets or gets the aspect ratio for Monitor 2. With the implementation of the [configdisplay](#) command on page 4-77, this command has been deprecated.

Syntax

```
moni tor2 off  
moni tor2 <get|4:3|16:9>  
moni tor2 vga
```

| Parameter | Description |
|-----------|--|
| off | Disables the second monitor output. |
| get | Returns the current setting. |
| 4:3 16:9 | Sets the aspect ratio to 4:3 (standard) or 16:9 (wide screen). |
| vga | Sets the display to VGA. |

Feedback Examples

- moni tor2 off
returns
moni tor2 off
- moni tor2 16:9
returns
moni tor2 16:9
- moni tor2 get
returns
moni tor2 16:9

See Also

See the [configdisplay](#) command on page 4-77.

monitor2screensaveroutput

Sets or gets whether to send either black video or "No Signal" to Monitor 2 when the screen saver activates.

Syntax

```
moni tor2screensaveroutput <get|bl ack|no_si gnal >
```

| Parameter | Description |
|------------|--|
| bl ack | Sends black video to Monitor 2 when the system goes to sleep and the screen saver activates. |
| no_si gnal | Sends no signal to Monitor 2 when the system goes to sleep and the screen saver activates. |
| get | Returns the current setting. |

Feedback Examples

- moni tor2screensaveroutput bl ack
returns
moni tor2screensaveroutput bl ack
- moni tor2screensaveroutput no_si gnal
returns
moni tor2screensaveroutput no_si gnal
- moni tor2screensaveroutput get
returns
moni tor2screensaveroutput no_si gnal

See Also

See the [monitor1screensaveroutput](#) command on page [4-236](#).

mpautoanswer

Sets or gets the Auto Answer Multipoint Video mode, which determines how the system will handle an incoming call in a multipoint video conference.

Syntax

```
mpautoanswer <get|yes|no|donotdi sturb>
```

| Parameter | Description |
|---------------|---|
| get | Returns the current setting. |
| yes | Connects incoming video calls automatically. The screen will split into a multipoint call progress screen as the incoming call is answered. |
| no | For an incoming video call, the user will be notified and given the choice to answer the call. If the user selects Yes, the call is added to the ongoing conference. If the user selects No, the call is rejected. The default is No. |
| donotdi sturb | The user is not notified of incoming video calls. The sites that placed the calls receive a Far Site Busy (H.320) or Call Rejected (H.323) code. |

Feedback Examples

- mpautoanswer yes
returns
mpautoanswer yes
- mpautoanswer no
returns
mpautoanswer no
- mpautoanswer get
returns
mpautoanswer no
- mpautoanswer donotdi sturb
returns
mpautoanswer donotdi sturb

Comments

If mpautoanswer is set to no or donotdi sturb, you must rely on API session notifications to answer inbound calls.

mpmode

Sets or gets the multipoint conference viewing mode for the system in a multipoint call. The multipoint mode can be set to auto, discussion, presentation, or fullscreen. By default, it is set to auto.

Syntax

`mpmode <get|auto|di scussi on|presentati on|ful l screen>`

| Parameter | Description |
|---------------|---|
| get | Returns the current setting. |
| auto | In Auto mode, the system switches between Full Screen Mode and Discussion mode, depending on the interaction between the sites. If one site is talking uninterrupted for 15 seconds or more, the speaker appears full screen. |
| presentati on | In Presentation mode, the person who is speaking appears full screen to the far sites, while the person who is speaking sees all the other sites on a split screen. |
| di scussi on | In Discussion mode (also called Continuous Presence mode), every site sees all the sites in the meeting at the same time, on a split screen. |
| ful l screen | In Full Screen mode, every site in the call sees the current speaker, or the latest person to speak, on the full screen. |

Feedback Examples

- `mpmode auto`
returns
`mpmode auto`
- `mpmode di scussi on`
returns
`mpmode di scussi on`
- `mpmode get`
returns
`mpmode di scussi on`

Comments

This option is not available unless the multipoint option is enabled.

What you see during a multipoint call can depend on many factors such as the system's monitor configuration, the number of sites in the call, whether content is shared, and whether dual monitor emulation is used.

mtumode

Sets or gets the MTU mode. The mtumode and mtusize commands allow you to change the Maximum Transmission Unit (MTU) size, to adjust for the best interoperability with the host network. Set mtumode to specify, then use mtusize to specify a value. If mtumode is set to default, the system automatically sets the MTU value to 1260.

Syntax

```
mtumode <get|default|specify>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| default | Sets the Maximum Transmission Unit size to the default value of 1260. |
| specify | Allows you to specify a Maximum Transmission Unit size other than the default setting. |

Feedback Examples

- mtumode default
returns
mtumode default
- mtumode specify
returns
mtumode specify
- mtumode get
returns
mtumode specify
- mtusize 660
returns
mtusize 660
- mtumode foo
returns
error: command has illegal parameters

See Also

See also the related [mtusize](#) command on page [4-243](#).

mtusize

Sets or gets the MTU size. The mtumode and mtusize commands allow you to change the Maximum Transmission Unit (MTU) size, to adjust for the best interoperability with the host network. Set mtumode to specify, then use mtusize to specify a value. If mtumode is set to default, the system automatically sets the MTU value to 1260.

Syntax

```
mtusize <get|660|780|900|1020|1140|1260|1500>
```

| Parameter | Description |
|---------------------------------|---|
| get | Returns the current setting. |
| 660 780 900 1020 1140 1260 1500 | Sets the value of the Maximum Transmission Unit size. |

Feedback Examples

- mtumode specify
returns
mtumode specify
- mtusize 660
returns
mtusize 660
- mtusize 1140
returns
mtusize 1140
- mtusize get
returns
mtusize 1140

See Also

See also the related [mtumode](#) command on page [4-242](#).

mute

Sets or gets the near or far site mute settings.

Syntax

```
mute <register|unregister>
mute near <get|on|off|toggle>
mute far get
```

| Parameter | Description |
|------------|--|
| register | Registers to receive notification when the mute mode changes. |
| unregister | Disables register mode. |
| near | Sets the command for the near site. Requires on, off, toggle, or get. |
| get | Returns the current setting for the near or far site. |
| on | Mutes the near site (mute near on). |
| off | Unmutes the near site (mute near off). |
| toggle | If mute near mode is mute near on, this switches to mute near off, and vice versa. |
| far | Returns the mute state of the far site system. Requires the parameter get. |

Feedback Examples

- mute register
returns
mute registered
- mute near on
returns
mute near on
- mute far get
returns
mute far off

Comments

In register mode, the system sends notification to the API session when the far or near site is muted or unmuted.

muteautoanswer

Sets or gets the Mute Auto Answer Calls mode. When this setting is selected, the microphone is muted to prevent the far site from hearing the near site when the system answers automatically.

Syntax

```
muteautoanswer <get|yes|no>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Enables Mute Auto Answer Calls mode. The microphone will be muted when the system receives a call while in Auto Answer mode. |
| no | Disables Mute Auto Answer Calls mode. The microphone will not be muted when the system receives a call while in Auto Answer mode. |

Feedback Examples

- `muteautoanswer yes`
returns
`muteautoanswercal ls yes`
- `muteautoanswer no`
returns
`muteautoanswercal ls no`
- `muteautoanswer get`
returns
`muteautoanswercal ls no`

natconfig

Sets or gets the NAT configuration.

Syntax

natconfig <get|auto|manual|off>

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| auto | Specifies that the system is behind a NAT; specifies that the system will automatically discover the public (WAN) address. |
| manual | Specifies that the system is behind a NAT. Requires the WAN address to be assigned using the wanipaddress command on page 4-363 . |
| off | Disables the option when the system is not behind a NAT. |

Feedback Examples

- natconfig auto
returns
natconfig auto
- natconfig manual
returns
natconfig manual
- natconfig off
returns
natconfig off
- natconfig get
returns
natconfig off

nath323compatible

Sets or gets the **NAT is H.323 Compatible** setting.

Syntax

`nath323compatible <get|yes|no>`

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Specifies that NAT is capable of translating H.323 traffic. |
| no | Specifies that NAT is not capable of translating H.323 traffic. |

Feedback Examples

- `nath323compatible yes`
returns
`nath323compatible yes`
- `nath323compatible no`
returns
`nath323compatible no`
- `nath323compatible get`
returns
`nath323compatible no`

nearloop

Activates or deactivates the Near End Loop test.

Syntax

`nearloop <on|off>`

| Parameter | Description |
|-----------|--|
| on | Activates the Near End Loop, a complete internal test of the system. |
| off | Deactivates the Near End Loop. |

Feedback Examples

- `nearloop on`
returns
`nearloop on`
- `nearloop off`
returns
`nearloop off`

Comments

When Near End Loop is on, you can test the encoder/decoder on the system. This test is not available when you are in a call.

netstats

Returns network statistics for each call.

Syntax

`netstats [{0..n}]`

| Parameter | Description |
|-----------|--|
| {0..n} | Call in a multipoint call, where n is the maximum number of calls supported by the system. 0 is the first site connected. If no call is specified, netstats returns information about the near site. |

Feedback Examples

- `netstats 2`
 returns
 call:1 txrate: 128 K rxrate: 128 K pkloss: 0 %pkloss: 0.0 %
 tvp: H. 263
 rvp: H. 263 tvf: CIF rvp: CIF tap: G. 722.1 rap: G. 722.1 tcp: H. 323
 rcp: H. 323
 where:
 txrate=transmit clock rate
 rxrate=receive clock rate
 pkloss=number of packet loss/errors
 %pkloss=percentage of packet loss/errors
 tvp=transmit video protocol
 rvp=receive video protocol
 tvf=transmit video format
 rvf=receive video format
 tap=transmit audio protocol
 rap=receive audio protocol
 tcp=transmit comm protocol
 rcp=receive comm protocol

nonotify

Unregisters the API client to receive status notifications.

Syntax

```
nonotify <callstatus|captions|linestatus|mutestatus|screenchanges>
nonotify <sysstatus|sysalerts|vidsourcechanges>
```

| Parameter | Description |
|------------------|--|
| calendarmetings | Stops the system from receiving meeting reminders. |
| callstatus | Stops the system from receiving changes in call status, such as a connection or disconnection. |
| captions | Stops the system from capturing closed captions as they appear on the screen. |
| linestatus | Stops the system from receiving line status notifications. |
| mutestatus | Stops the system from receiving changes in audio mute status. |
| screenchanges | Stops the system from receiving notification when a user interface screen is displayed. |
| sysstatus | Stops the system from receiving system status notifications. |
| sysalerts | Stops the system from receiving system alerts. |
| vidsourcechanges | Stops the system from receiving notification of camera source changes. |

Feedback Examples

- nonotify callstatus
returns
nonotify callstatus success
- If entered again,
nonotify callstatus
returns
info: event/notification not active: callstatus
- nonotify calendarmetings
returns
nonotify calendarmetings success

See Also

See the related [notify](#) command on page [4-251](#).

notify

Lists the notification types that are currently being received, or registers to receive status notifications.

Syntax

```
notify
notify <callstatus|captions|linestatus|mutestatus|screenchanges>
notify <sysstatus|sysalerts|vidsourcechanges>
notify calendarmetings
```

| Parameter | Description |
|-----------------|---|
| notify | Lists the notification types that are currently being received, in the following format:
registered for <num>
notifications[: notification type...] |
| calendarmetings | Registers the API client to receive meeting reminders. |
| callstatus | Registers the system to receive changes in call status, such as a connection or disconnection, in the following format:
notification: callstatus: <call direction>: <call id>: <far site name>: <far site number>: <connection status>: <call speed>: <status-specific cause code from call engine>: <call type> |
| captions | Registers the system to capture closed captions as they appear on the screen, in the following format:
notification: caption: <"caption string"> |
| linestatus | Registers the system to receive line status notifications as they occur, in the following format:
notification: linestatus: <direction>: <call id>: <line id>: <channel id>: <connection status> |
| mutestatus | Registers the system to receive changes in audio mute status, in the following format:
notification: mutestatus: <near or far>: <call id>: <site name>: <site number>: <mute status> |
| screenchanges | Registers the system to receive notification when a user interface screen is displayed, in the following format:
notification: screenchange: <screen name>: <screen def name> |

| Parameter | Description |
|------------------|---|
| sysstatus | Registers the system to receive system status notifications, in the following format:
notification: sysstatus: <sys parameter name>: <value1>[:<value2>...] |
| sysalerts | Registers the system to receive system alerts, in the following format:
notification: sysalert: <alert name>: <value1>[:<value2>...] |
| vidsourcechanges | Registers the system to receive notification of camera source changes, in the following format:
notification: vidsourcechange: <near or far>: <camera index>: <camera name>: <people or content> |

Feedback Examples

- **notify mutestatus**
returns
notify mutestatus success
acknowledging that the session is now registered to receive mutestatus notifications
- **notify callstatus**
returns
notify callstatus success
acknowledging that the session is now registered to receive callstatus notifications
- If entered again,
notify callstatus
returns
info: event/notification already active: callstatus
- **notify**
returns
registered for 2 notifications: mutestatus:
- **notify calendarmetings**
returns
notify calendarmetings success

The following are examples of notifications that may be returned after registering to receive them.

- notification: callstatus: outgoing: 34: Polycom HDX Demo: 192.168.1.101: connected: 384: 0: video call
- notification: mutestatus: near: near: near: near: muted
- notification: screenchange: systemsetup: systemsetup_a

- notifi cation: vidsourcechange: near: 1: Main: people
- notifi cation: linestatus: outgoing: 32: 0: disconnected
- notifi cation: vdsourcechange: near: 6: ppcip: content
- notifi cation: vdsourcechange: near: none: none: content
- notifi cation: callendmeetings:
AAAAaAEFsZXguTWFj RG9uYWlxkQHBvbHlj b20uY29tAVEACIj Mne2/ndgARgA
AAADr9GI hsSj WEZBcAAKzMphJBwA4wi cbtr3UEZArAKAk09LtAACZpKWAA
De7hJl eQI OS7j 2mzRJxKLKAAADI /G8AAAQ:Product_Planning: 10

Comments

The **notify callstatus** command registers the current API session for call status notifications. The API client receives call status notifications as a call progresses.

Registration for status notifications is session-specific. For example, registering for alerts in a Telnet session does not return alerts in a simultaneous RS-232 session with the same system.

The **notify captions** command registers the current API session to receive notifications as closed captions are displayed. If closed captions are dropped for some reason, no notification is received. This command is typically used for capturing captions being displayed for archival purpose.

Duplicate registrations produce another success response. The notify setting remains in effect, even if you restart the system or update the software with system settings saved.

See Also

See also the [nonotify](#) command on page [4-250](#) and the [callinfo](#) command on page [4-61](#).

ntpmode

Sets or gets the mode of the system's Network Time Protocol (NTP) server. NTP server time is used to ensure synchronized time data in the local Call Detail Report.

Syntax

```
ntpmode <get|auto|off|manual>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current time server mode. |
| auto | Automatically selects an NTP server from the Internet. |
| off | Turns off the use of an NTP server. |
| manual | Lets you specify a server using the ntpserver command on page 4-256 . |

Feedback Examples

- ntpmode auto
returns
ntpmode auto
- ntpmode off
returns
ntpmode off
- ntpmode manual
returns
ntpmode manual
- ntpmode get
returns
ntpmode manual

See Also

See the [ntpserver](#) command on page [4-256](#).

ntpsecondaryserver

Sets or gets a secondary Network Time Protocol (NTP) server using the IP address or DNS name of the server.

Syntax

```
ntpsecondaryserver get  
ntpsecondaryserver set ["xxx. xxx. xxx. xxx" | "server name"]
```

| Parameter | Description |
|----------------------|--|
| get | Gets the IP address of the secondary NTP server. |
| set | Sets the IP address of the secondary NTP server when followed by a valid parameter. To erase the current setting, omit the ["xxx. xxx. xxx. xxx" "server name"] parameter. |
| "xxx. xxx. xxx. xxx" | The IP address of the secondary NTP server. |
| "server name" | The DNS name of the secondary NTP server |

Feedback Examples

- ntpsecondaryserver set
returns
ntpsecondaryserver <empty>
- ntpsecondaryserver set 172. 26. 44. 22
returns
ntpsecondaryserver 172. 26. 44. 22
- ntpsecondaryserver get
returns
ntpsecondaryserver 172. 26. 44. 22

Comments

The primary NTP server must be configured in order to configure the secondary NTP server

See Also

[ntpserver](#) on page 4-256.

ntpserver

Sets or gets an Network Time Protocol (NTP) server, using the IP address or the DNS name of the server.

Syntax

```
ntpserver get
ntpserver set [ "xxx.xxx.xxx.xxx" | "server name" ]
```

| Parameter | Description |
|-------------------|--|
| get | Gets the IP address of the NTP server. |
| set | Sets the IP address of the NTP server when followed by a valid parameter. To erase the current setting, omit the ["xxx.xxx.xxx.xxx"] "server name"] parameter. |
| "xxx.xxx.xxx.xxx" | The IP address of the NTP server. |
| "server name" | The DNS name of the NTP server. |

Feedback Examples

- ntpserver set
returns
ntpserver <empty>
- ntpserver set 192.168.1.205
returns
ntpserver 192.168.1.205
- ntpserver get
returns
ntpserver 192.168.1.205

Comments

This command allows you to use an internal time server and thus synchronize the system's time with the time on your internal network. The system uses this time only for the local Call Detail Report.

See Also

[ntpsecondaryserver](#) command on page 4-255.

numberofmonitors (deprecated)

Returns the number of display monitors configured. With the implementation of the [configdisplay](#) command on page 4-77, this command has been deprecated.

Syntax

```
numberofmonitors get
```

Feedback Examples

- `numberofmonitors get`
returns
`numberofmonitors 1`
when one monitor is configured for display
- `numberofmonitors get`
returns
`numberofmonitors 2`
when two monitors are configured for display

See Also

The recommended command for accessing display configuration is the [configdisplay](#) command on page 4-77. For example, to determine the state of Monitor 2, use `configdisplay monitor2 get`.

numdigid

Sets or gets the number of digits in the DID Gateway number (E.164 dialing).

Syntax

numdi gi tsdi d <get|{0..24}>

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| {0..24} | Specifies the number of digits in DID numbers. |

Feedback Examples

- numdi gi tsdi d 7
returns
numdi gi tsdi d 7
- numdi gi tsdi d get
returns
numdi gi tsdi d 7

Comments

The number of digits in the DID is that portion of the full DID that the Gateway will be given from the ISDN service provider as the Called Party Line Identifier. This, in turn, will be passed to the Gatekeeper for address resolution.

numdigitsex

Sets or gets the number of digits in the Number+Extension Gateway number (E.164 dialing).

Syntax

```
numdi gi tsext <get|{0..24}>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| {0..24} | The number of digits in the gateway number if gatewaynumbertype command on page 4-149 is set to number+extension. |

Feedback Examples

- numdi gi tsext 10
returns
numdi gi tsext 10
- numdi gi tsext get
returns
numdi gi tsext 10

Comments

The number of digits in that number is that portion of the full Number+Extension number that the Gateway will be given from the ISDN service provider as the Called Party Line Identifier. This, in turn, will be passed to the Gatekeeper for address resolution.

ocsdirectory

Enable Polycom HDX systems to retrieve and display the Microsoft Office Communications Server contact list and to disable other global directory services.

Syntax

`ocsdi rectory <get|yes|no>`

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Enables the Microsoft Office Communications Server 2007 directory server. |
| no | Disables the Microsoft Office Communications Server 2007 directory server. This is the default setting. |

Feedback Examples

- `ocsdi rectory get`
returns
`ocsdi rectory yes`
- `ocsdi rectory no`
returns
`ocsdi rectory no`

Comments

Polycom HDX systems must be registered with the Microsoft Office Communications Server 2007 directory server to enable the Microsoft Office Communications Server 2007 directory service.

Polycom software versions 3.0 and later also support Microsoft Lync Server 2010. Refer to the *Administrator's Guide for Polycom HDX Systems* for more information.

Each Polycom HDX system supports a single global directory server at any given time. Therefore, enabling the Microsoft Office Communications Server 2007 automatically disables any other enabled global directory server, such as the Polycom GDS or LDAP directory server.

If more than one global directory is defined on a system, the following rules apply when you upgrade the system software:

- If the Microsoft Office Communications Server 2007 directory server and another directory server are defined on the system, the Microsoft Office Communications Server 2007 directory server becomes the default directory server after upgrading the system software.
- If the Polycom GDS directory server and another directory server (not the Microsoft Office Communications Server 2007 directory server) are defined on the system, the Polycom GDS directory server becomes the default directory server after upgrading the system software.

oobcomplete

Completes the setup wizard and restarts the Polycom HDX system.

Syntax

oobcomplete

Feedback Examples

oobcomplete

returns

oobcomplete

Comments

The oobcomplete command is processed only when the Polycom HDX system is in setup wizard mode.

To execute oobcomplete successfully, the Polycom HDX system name must be configured.

pause

Pauses the command interpreter before executing the next command. Pauses are useful when commands are retrieved from a script file.

Syntax

pause {0..65535}

| Parameter | Description |
|------------|-----------------------------|
| {0..65535} | Number of seconds to pause. |

Feedback Examples

- pause 3
returns
pausing for 3 seconds
- pause 0
returns
pausing for 0 seconds

peoplevideoadjustment

Sets or gets the people video adjustment setting.

Syntax

```
peopl evi deoadj ustment <get|normal |stretch|zoom>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| normal | Preserves the aspect ratio of the source video. The image is scaled (if necessary) to the largest supported resolution that fits on the display without cropping. |
| stretch | Does not preserve aspect ratio. The image is scaled horizontally and vertically to exactly match the resolution of the display. |
| zoom | Preserves the aspect ratio of the source video. The image is scaled to exactly match one of the display dimensions while matching or exceeding the other display dimension. The image is centered and cropped. |

Feedback Examples

- peopl evi deoadj ustment zoom
returns
peopl evi deoadj ustment zoom
- peopl evi deoadj ustment stretch
returns
peopl evi deoadj ustment stretch
- peopl evi deoadj ustment normal
returns
peopl evi deoadj ustment normal
- peopl evi deoadj ustment get
returns
peopl evi deoadj ustment normal

phone

Flashes the analog phone line.

Syntax

phone <cl ear | fI ash>

| Parameter | Description |
|-----------|--|
| cl ear | Clears phone number from the text box. |
| fI ash | Sends flash hook to a POTS connection. |

See Also

Use the [flash command](#) on page [4-135](#) to specify a call ID.

pip

Sets or gets the on-screen PIP mode. The PIP feature allows the near site to adjust near-camera views while in a video conference.

Syntax

```
pi p <get|on|off|camera|swap|register|unregister|location>
pi p location <get|0|1|2|3>
```

| Parameter | Description |
|------------|--|
| get | Returns the current setting. |
| on | Enables PIP mode. The system shows a PIP window that remains in the lower right corner of the screen until the video call is completed. |
| off | Disables PIP mode. |
| camera | Causes the PIP window to appear when the selected camera position is changed. The PIP window disappears when the camera has finished moving. |
| swap | Toggles the content of the PIP and the main display between the near-site and far-site view. |
| register | Registers the system to give notification when PIP is turned on or off. |
| unregister | Unregisters the system to give notification when PIP is turned on or off. |
| location | Places the PIP window in the specified corner of the screen:
0 = bottom right corner
1 = top right corner
2 = top left corner
3 = bottom left corner
get = Returns the current location |

Feedback Examples

- pi p on
returns
pi p on
- pi p swap
returns
pi p swapped

- `pip location get`
returns
`pip location 1`
- `pip register`
returns
`pip registered`

popupinfo

Registers or unregisters the session to receive popup text and button choices text.

Syntax

`popupinfo <get|register|unregister>`

| Parameter | Description |
|------------|---|
| register | Registers to receive popup information. |
| unregister | Unregisters to receive popup information. |
| get | Returns the current setting. |

Feedback Examples

- `popupinfo register`
returns
`popupinfo registered`
- `popupinfo unregister`
returns
`popupinfo unregistered`
- `popupinfo get`
returns
`popupinfo unregistered`

The following examples show notifications that may be returned after registering to receive popup text and button choices text.

- `popupinfo: question: Sorry. Cannot dial number because you are already in a call with the site.`
- `popupinfo: choice0: Ok`
is returned if a call fails
- `popupinfo: question: Save Changes?`
`popupinfo: choice0: Yes`
`popupinfo: choice1: No`
`popupinfo: answered: Yes`
is returned if the user edits the password field

preset

Sets the presets or goes (moves) to the presets for the near or far camera source. Also registers or unregisters the API session to give notification when the user sets or goes to presets.

Syntax

```
preset <register|unregister>
preset register get
preset far <go|set> <{0..15}>
preset near <go|set> <{0..99}>
```

| Parameter | Description |
|------------------|---|
| register | Registers the system to give notification when the user or far site sets or goes to a preset. Returns the current preset registration state when followed by the get parameter. |
| unregister | Disables register mode. |
| far | Specifies the far camera. Requires a set or go parameter and a preset identifier. |
| go | Moves the camera to a camera preset. Requires a "preset" parameter. |
| set | Sets a camera preset. Requires a "preset" parameter. |
| {0..15}, {0..99} | Camera preset identifier. Must be an integer in the range {0..15} for a far-site camera or {0..99} for a near-site camera. |
| near | Specifies the near camera. Requires a set or go parameter and a preset identifier. |

Feedback Examples

- preset register
returns
preset registered
- preset near go 1
returns
preset near go 1
and moves the near-site camera to the preset 1 position
- preset near set 2
returns
preset near set 2
and saves the current location/position of the near-site camera as preset 2

Comments

Up to 100 preset camera positions can be set. These camera presets can be distributed across the far camera and up to four near-site cameras.

pricallbycall

Sets or gets the PRI call-by-call value. This command is only applicable if you have a PRI network interface connected to your system.

Syntax

```
pri call bycall get
pri call bycall set {0..31}
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| set | Sets PRI call-by-call when followed by a value from {0..31}. |
| {0..31} | Range of call-by-call values. |

Feedback Examples

- pri call bycall set 1
returns
pri call bycall 1
- pri call bycall get
returns
pri call bycall 1

Comments

Call-by-call is a number from 0 to 31, which is optionally sent to an upstream telephone company switch, if required. For example, specify a value of 6 for a T1 PRI network interface module that is directly connected to an ATT 5ESS switch, which is provisioned with Accunet. You must consult with the telephone company service provider to determine whether a call-by-call value is required for a particular PRI line. For most cases, the default value of 0 is correct. Always use the value 0 when connected to a PBX. A non-zero value should not be required in Europe. Values greater than 31 are reserved for internal use and must not be used.

prichannel

Sets or gets the PRI channels that will be active for the PRI line. This command is only applicable if you have a PRI network interface connected to your system.

Syntax

```
pri channel get all
pri channel get {1..n}
pri channel set all
pri channel set {1..n} <on|off>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. Requires a parameter from <all {1..n}>. |
| all | Selects all PRI channels and returns all channels and settings similar to bri all enable. |
| {1..n} | Range of available PRI channels. For PRI T1, the range is 1..23. For PRI E1, the range is 1..30. |
| set | Sets the PRI channels to be active when followed by a parameter from <all {1..n}> and from <on off>. |
| on | Activates the selected PRI channels. |
| off | Disables the selected PRI channels. |

Feedback Examples

- pri channel 1 set on
returns
pri channel 1 on
- pri channel set 23 off
returns
pri channel 23 off
- pri channel get 23
returns
pri channel 23 off

Important PRI Channel Information

Outgoing Call. For an outgoing call, the system uses the first active and available channel starting with the lowest number from the channel range (1-23 for a PRI T1 and 1-30 for a PRI E1). If an additional channel is needed, the system chooses the next incremental number. For example, if channels 1

through 7 are inactive, but 8 is active and available, then 8 is the first channel that can be used by the system to place an outgoing call. If an additional channel is needed, the system will use the next available active channel in the range (which could be 9, and so on).

Incoming Calls. For incoming calls, the system may use the highest numbered channel in the range and, if needed, proceed to the next channel number in descending order, depending on the type of third-party equipment attached to the system. For example, an incoming call arrives on channel 23, then 22, 21, and so on.

Dedicated full PRI T1 or E1 Line. All channels should be active for a full T1 or E1 line dedicated to your system.

Fractional PRI T1 or E1. Channel selection should be handled by your PRI network administrator.

PRI E1 Channel Information. The PRI Status screen (for E1) shows 30 channels. However, E1 trunk lines have 32 timeslots, numbered 0 - 31. Timeslot 0 is used for framing, and timeslot 16 is used for call signaling (the D channel). The remaining 30 timeslots are used as bearer (data) channels. In call signaling between our equipment and the switch, these channels are numbered 1-15, 17-31. But the PRI Status screen numbers these channels contiguously in the range 1-30. Therefore, on the PRI Status screen, channels 1-15 control the status of timeslots 1-15, and channels 16-30 control the status of timeslots 17-31.

pricsu

Sets or gets the PRI CSU mode for a T1 interface.

Syntax

```
pricsu <get|internal|external>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| internal | Sets the internal CSU mode. This is the default. |
| external | Sets the external CSU mode. When selected, you must specify the PRI line buildout. |

Feedback Examples

- pri csu internal
returns
pri csu internal
- pri csu external
returns
pri csu external
- pri csu get
returns
pri csu external

Comments

By default, the T1 PRI network interface module is set for internal CSU mode.

See Also

The PRI line buildout for a T1 interface is set using the [prilinebuildout](#) command on page [4-277](#).

pridialchannels

Sets or gets the number of PRI channels to dial in parallel. This command is only applicable if you have a PRI network interface connected to your system.

Syntax

```
pri dial channels get
pri dial channels set {1..n}
```

| Parameter | Description |
|-----------|--|
| set | Sets the number of PRI channels to be dialed in parallel when followed by a parameter from {1..n}. To erase the current setting, omit the parameter. |
| get | Returns the current number of channels dialed in parallel. |
| {1..n} | Range of numbers of PRI channels that can be dialed in parallel. For PRI T1, the range is 1..12. For PRI E1, the range is 1..15. |

Feedback Examples

- pri dial channels set 3
returns
pri dial channels 3
- pri dial channels get
returns
pri dial channels 3

Comments

By default, ISDN channels are dialed three at a time. On PRI systems, you can choose the number of channels to dial in parallel.

priintlprefix

Sets or gets the PRI international dialing prefix.

Syntax

```
priintlprefix get  
priintlprefix set ["prefix"]
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| set | Sets the PRI international dialing prefix when followed by the parameter "prefix". To erase the current setting, omit the parameter. |
| "prefix" | Numeric string. |

Feedback Examples

- priintlprefix set 011
returns
priintlprefix 011
- priintlprefix get
returns
priintlprefix 011

Comments

The international prefix defaults to 011 for North America and 00 for European countries. The default depends on the country.

prilinelinebuildout

Sets or gets the PRI line buildout for a T1 interface.

Syntax

```
prilinelinebuildout get
prilinelinebuildout set <0|-7.5|-15|-22.5>
prilinelinebuildout set <0-133|134-266|267-399|400-533|534-665>
```

| Parameter | Description |
|---------------------------------------|--|
| get | Returns the current setting. |
| set | Sets the PRI line buildout. It requires an output "attenuation in dB" or an "attenuation in feet". |
| 0 -7.5 -15 -22.5 | Output attenuation values in dB. For internal CSUs. |
| 0-133 134-266 267-399 400-533 534-665 | Output attenuation values in feet. For external CSUs. |

Feedback Examples

- prilinelinebuildout set -7.5
returns
prilinelinebuildout -7.5
- prilinelinebuildout get
returns
prilinelinebuildout -7.5

Comments

If you are using an internal CSU, enter the output attenuation in dB. If you are using an external CSU, enter the output attenuation in feet.

See Also

The PRI CSU mode for a T1 interface is set using the [pricsu](#) command on page [4-274](#).

prilinesignal

Sets or gets the PRI line signal.

Syntax

```
prilinesignal get
prilinesignal set <esf/b8zs|crc4/hdb3|hdb3>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current PRI line signal setting. |
| set | Sets the PRI line signal. It requires one of the following parameters: esf/b8zs, crc4/hdb3, hdb3 |
| esf/b8zs | A method of signal encoding used with a T1 interface. This is the only choice for T1. This value actually chooses both a framing format and an encoding method. Legacy frame formats, such as D4, are not supported. In addition, older encoding methods, such as B7ZS, are not supported. |
| crc4/hdb3 | A method of signal encoding used with an E1 interface. This is the default value. Data is encoded using HDB3 to ensure proper one-density, and CRC4 error checking is enabled on both transmit and receive. |
| hdb3 | A method of signal encoding used with an E1 interface. CRC4 error checking is disabled. |

Feedback Examples

- prilinesignal set esf/b8zs
returns
prilinesignal esf/b8zs
- prilinesignal get
returns
prilinesignal esf/b8zs

prinumberingplan

Sets or gets the PRI numbering plan. This command is only applicable if you have a PRI network interface connected to your system.

Syntax

```
pri numberi ngpl an <get | i sdn | unknown>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| i sdn | With this parameter, the numbering plan is identified to the upstream switch as ISDN, and the number type, which is either national or international, is determined from the dialed phone number. If the dialed phone number starts with the international dialing prefix that is currently selected, the type is set to the international and the prefix is removed from the number before the number is sent to the upstream switch. Otherwise, the number is marked as national and passed to the upstream switch without modification. |
| unknown | This is the default selection. With this parameter, the numbering plan and number type are sent to the upstream as unknown, and the dialed phone number is sent without notification. The unknown parameter is preferred and should work with all properly configured PBXs and with most telephone company switches. A notable exception in North America is an ATT 5ESS switch, which is provisioned with Accunet, or an ATT 4ESS switch. For these switches, set the numbering type to ISDN. |

Feedback Examples

- pri numberi ngpl an i sdn
returns
pri numberi ngpl an i sdn
- pri numberi ngpl an unknown
returns
pri numberi ngpl an unknown
- pri numberi ngpl an get
returns
pri numberi ngpl an unknown

prioutsideline

Sets or gets the PRI number that is dialed for outside line access.

Syntax

```
pri outsi del i ne get  
pri outsi del i ne set ["outsi de_l i ne"]
```

| Parameter | Description |
|-------------------|---|
| get | Returns the current setting. |
| set | Sets the outside-line-access PRI number when followed by the parameter "outsi de_l i ne". To erase the current setting, omit the parameter. |
| "outsi de_l i ne" | Numeric string. This number is provided by your network service provider. |

Feedback Examples

- pri outsi del i ne set 9
returns
pri outsi del i ne 9
- pri outsi del i ne get
returns
pri outsi del i ne 9

Comments

This number is needed if your system is on a PBX.

priswitch

Sets or gets the PRI switch.

Syntax

```
pri swi tch get
pri swi tch set <att5ess|att4ess|nortel dms|ni 2>
pri swi tch set <net5/ctr4|ntt i ns-1500|ts-038>
```

| Parameter | Description |
|---|---|
| get | Returns the current switch protocol. |
| set | Sets the PRI switch. One of the switch protocol parameters is required. |
| att5ess att4ess nortel dms ni 2 net5/ctr4 ntt i ns-1500 ts-038 | Switch protocol values.
For E1, net5/ctr4 is the default. net5/ctr4 is the standard ETSI protocol derived from ITU Q.931.
For T1, net5/ctr4 is also provided for certain Asian countries, such as Japan, Hong Kong, and Taiwan. |

Feedback Examples

- pri swi tch set att5ess
returns
pri swi tch att5ess
- pri swi tch get
returns
pri swi tch att5ess

Comments

If more than one switch protocol is supported, you must find out from your telephone service provider which protocol to select. NET5/CTR4 is the default. It is the standard ETSI protocol derived from ITU Q.931. If you change the country settings, a new set of PRI switch protocols is loaded.

reboot

Restarts the system.

Syntax

reboot [y|now|n]

| Parameter | Description |
|-----------|---|
| y | Reboots the system without prompting you. |
| now | Reboots the system without prompting you. |
| n | Does not reboot the system. |

Feedback Examples

- `reboot y`
does not prompt the user to confirm and reboots the system with no other feedback returned
- `reboot now`
does not prompt the user to confirm and reboots the system with no other feedback returned
- `reboot n`
does not reboot the system and returns
enter “reboot y” or “reboot now” to initiate system reboot

Comments

The preferred format is `reboot now`.

recentcalls

Returns the list of recent calls.

Syntax

`recentcalls`

Feedback Examples

- `recentcalls`
returns
"Polycom HDX Demo" 30/Nov/2008 14:39:56 Out
192.168.1.101 30/Nov/2008 14:40:07 Out
192.168.1.102 30/Nov/2008 14:40:35 Out
192.168.1.103 30/Nov/2008 20:27:33 Out
"John Polycom HDX 9004" 30/Nov/2008 02:13:23 In
192.168.1.104 30/Nov/2008 02:20:08 In
192.168.1.105 30/Nov/2008 02:21:40 In
192.168.1.106 30/Nov/2008 05:53:04 In
"Mary Polycom HDX 9004" 30/Nov/2008 07:00:19 In

Comments

Calls returned by the `recentcalls` command are returned in this format:

Display Name/Start Date/Start Time/Call Direction.

For example:

Polycom HDX Demo" 30/Nov/2008 14:39:56/Out

The display name value that is returned depends on the type of call.

In outgoing calls:

- If the call is placed from Directory screen or Favorites screen, the Polycom HDX system returns the display name of the endpoint being called.
- If the call is placed from the Place a Call screen, and the number is in the Polycom HDX system directory, the display name of the directory entry is returned. If the number is not in the Polycom HDX system directory, the IP number is returned as the display name.

In incoming calls, if the Polycom HDX system receives caller ID information, or if the the caller number is already in the Polycom HDX system directory, the caller ID name or the Polycom HDX system display name will be returned as the display name. If there is no caller ID information and the number is not in the Polycom HDX system directory, the IP address is returned as the display name.

registerall (deprecated)

Alias for the [all register](#) command.

Syntax

registerall

Feedback Examples

registerall
returns
callstate registered
camera registered
chaircontrol registered
linestate registered
mute registered
pip registered
popup registered
popupinfo registered
preset registered
screen registered
vcbutton registered
volume registered
sleep registered
phone registered
video registered
vcstream registered
vc pod registered
vc lan registered

See Also

This command is an alias for the preferred [all register](#) command on page [4-19](#).

To unregister user feedback, use the [all unregister](#) command on page [4-21](#) or the [unregisterall \(deprecated\)](#) command on page [4-333](#).

registerthissystem

Sets or gets the system's IP address to be registered and displayed in the global directory when the system is powered on.

Syntax

```
registerthissystem <get|yes|no>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Enables this option (register this system). |
| no | Disables this option. |

Feedback Examples

- registerthisystem yes
returns
registerthisystem yes
- registerthisystem no
returns
registerthisystem no
- registerthisystem get
returns
registerthisystem no

Comments

If you do not enable this option, the system has access to the GDS, but the IP address does not appear in the global directory.

remotecontrol

Set or gets the setting for intercepting signals from the system remote control.

Syntax

```
remotecontrol disable <get|all|none>
remotecontrol disable "valid button" ["valid button" ...]
remotecontrol dontintercept <all|none>
remotecontrol dontintercept "valid button" ["valid button" ...]
remotecontrol enable <all|none>
remotecontrol enable "valid button" ["valid button" ...]
```

| Parameter | Description |
|----------------|--|
| disable | Disables specified remote control button(s) so that the system does not respond. |
| get | Returns the current setting. |
| all | All of the remote control buttons. |
| none | None of the remote control buttons. |
| "valid button" | Name of a specific button such as call, hangup, left, right, up, down, select, home, directory, back, zoom-, zoom+, volume-, volume+, mute, far, near, auto, camera, preset, pip, keyboard, delete, ., 0-9, *, #, graphics, or help. |
| enable | Enables specified remote control button(s). |
| power | Enables or disables the Power button on the remote control. |

Feedback Examples

- remotecontrol disable all
returns
remotecontrol disable all success
- remotecontrol disable get
returns
disabled 1 buttons: pip

Comments

Remote control disable commands do not persist across the power cycle.

remotemonenable

Gets the state of remote room and call monitoring.

Syntax

```
remotemonenable <get>
```

Feedback Examples

- remotemonenable get
returns
remotemonenable on
- remotemonenable get
returns
remotemonenable off

requireacctnumtodial

Enables or disables the **Require Account Number to Dial** option. It is used to log calls to a specific account so that they can be tracked and billed to the appropriate departments.

Syntax

```
requi reacctnumtodi al <get|yes|no>
```

| Parameter | Description |
|-----------|------------------------------|
| get | Returns the current setting. |
| yes | Enables the option. |
| no | Disables the option. |

Feedback Examples

- requi reacctnumtodi al yes
returns
requi reacctnumtodi al yes
- requi reacctnumtodi al no
returns
requi reacctnumtodi al no
- requi reacctnumtodi al get
returns
requi reacctnumtodi al no

Comments

When this option is selected, you cannot make a call without first entering an account number. This account number is saved in the Global Management System server database along with information specific to the call. Typically, the Global Management System administrator assigns the account number.

resetSystem

Resets the system and, optionally, deletes system settings or local address book entries.

Syntax

```
resetSystem [del etesystemsetti ngs]
[del etel ocal di rectory][del etecdr][del etel ogs][del etecerti fi cates]
```

| Parameter | Description |
|--------------------------|---|
| del etesystemsetti ngs | Resets all configuration settings to default values. |
| del etel ocal di rectory | Deletes all local directory entries from the address book. |
| del etecdr | Deletes the CDR file from the /opt/polycom/cdr directory after copying the contents of the file to the trace log. |
| del etel ogs | Deletes the system logs. |
| del etecerti fi cates | Deletes all certificates from the system. |

Feedback Examples

- resetSystem
returns
resetSystem
- resetSystem del etesystemsetti ngs
returns
resetSystem del etesystemsetti ngs
- resetSystem del etel ocal di rectory
returns
resetSystem del etel ocal di rectory
- resetSystem del etecdr
returns
resetSystem del etecdr
- resetSystem del etesystemsetti ngs del etel ocal di rectory
del etecdr
returns
resetSystem del etesystemsetti ngs del etel ocal di rectory
del etecdr
- resetSystem del etel ogs
returns
resetSystem del etel ogs

- `resetsystem deletecertificates`
returns
`resetsystem deletecertificates`

roomphonenumber

Sets or gets the number of the phone that is located in the same room as the system.

Syntax

```
roomphonenumber get
roomphonenumber set ["number"]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the room phone number when followed by the "number" parameter. To erase the current setting, omit the "number" parameter. |
| "number" | Phone number for a telephone (not the system) in the room. Use quotation marks around the number if it contains spaces. For example: "408 555 2323" |

Feedback Examples

- roomphonenumber set
returns
roomphonenumber <empty>
- roomphonenumber set "408 555 2323"
returns
roomphonenumber 408. 555. 2323
- roomphonenumber get
returns
roomphonenumber 408. 555. 2323

Comments

If the system is managed by the Global Management System software, this number will be provided to the Global Management System administrator if the person using the system requests help.

rs232 baud, rs232port1 baud

The `rs232 baud` command sets or gets the baud rate for the first RS-232 port. For systems with two serial ports, use `rs232port1 baud` to set the rate for the second serial port.

Syntax

```
rs232 baud <get|9600|14400|19200|38400|57600|115200>
rs232port1 baud <get|9600|14400|19200|38400|57600|115200>
```

| Parameter | Description |
|-------------------------------------|---|
| get | Returns the current baud rate setting. |
| 9600 14400 19200 38400 57600 115200 | Sets the RS-232 port to this baud rate. |

Feedback Examples

- `rs232 baud 9600`
returns
`rs232 baud 9600`
- `rs232 baud get`
returns
`rs232 baud 9600`
- `rs232port1 baud 14400`
returns
`rs232port1 baud 14400`
- `rs232port1 baud get`
returns
`rs232port1 baud 14400`

rs232 mode, rs232port1 mode

The `rs232 mode` command sets or gets the operational mode of the first RS-232 port. For systems with two serial ports, use `rs232port1 mode` to set the mode for the second serial port.

Syntax

```
rs232 mode <get|passthru|control|debug|camera_ptz|closed_caption|
vortex_mixer|cps|interactive_touch_board|polycom_annotation|
smartboard|pointmaker>
rs232port1 mode <get|passthru|control|debug|camera_ptz|closed_caption|
vortex_mixer|cps|interactive_touch_board|polycom_annotation|
smartboard|pointmaker>
```

| Parameter | Description |
|-------------------------|---|
| get | Returns the current mode setting. |
| passthru | Sets the RS-232 port to Pass Thru mode. |
| control | Sets the RS-232 port to Control mode. |
| debug | Sets the RS-232 port to Debug mode. |
| camera_ptz | Sets the RS-232 port to Camera PTZ mode. |
| closed_caption | Sets the RS-232 port to Closed Caption mode. |
| vortex_mixer | Sets the RS-232 port to Vortex Mixer mode. |
| interactive_touch_board | Sets the RS-232 port to Interactive Touch Board mode. |
| smartboard | Sets the RS-232 port to Interactive Touch Board mode (to control a Polycom SMART board device). |
| polycom_annotation | Sets the RS-232 port to Polycom Annotation mode. |
| cps pointmaker | Reserved for future applications. |

Feedback Examples

- `rs232 mode control`
returns
`rs232 mode control`
- `rs232port1 mode closed_caption`
returns
`rs232port1 mode closed_caption`

- `rs232port1 mode get`
`returns`
`rs232port1 mode closed_caption`

rs366dialing

Sets or gets RS-366 dialing. This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

```
rs366dialing <get|on|off>
```

| Parameter | Description |
|-----------|------------------------------|
| get | Returns the current setting. |
| on | Enables RS-366 dialing. |
| off | Disables RS-366 dialing. |

Feedback Examples

- rs366dialing on
returns
rs366dialing on
- rs366dialing off
returns
rs366dialing off
- rs366dialing get
returns
rs366dialing off

Comments

Enable this option if you want to call from the system through the DCE connection to the far-site video conferencing system. Disable this option if you are using your DCE to dial the call or if you have a dedicated connection to the far site.

rt

Sets or gets the RT serial interface control signal (receive timing: clock). This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

rt <get|normal |inverted>

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| normal | Sets the signal to normal (rising edge receives data). |
| inverted | Sets the signal to inverted (falling edge receives data). |

Feedback Examples

- rt normal
returns
rt normal
- rt inverted
returns
rt inverted
- rt get
returns
rt inverted

Comments

The default setting is normal .

rts

Sets or gets the RTS serial interface control signal (request to send). This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

`rts <get|normal |inverted>`

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| normal | Sets the signal to normal (high voltage is logic 1). |
| inverted | Sets the signal to inverted (low voltage is logic 1). |

Feedback Examples

- `rts normal`
returns
`rts normal`
- `rts inverted`
returns
`rts inverted`
- `rts get`
returns
`rts inverted`

Comments

The default setting is “normal”.

screen

Returns the name of the current user interface screen on the system, registers or unregisters for screen changes, or goes to a specific user interface screen.

Syntax

```
screen
screen register get
screen [register|unregister]
screen "screen_name"
```

| Parameter | Description |
|---------------|--|
| screen | Returns the name of the current user interface screen if not followed by other parameters. |
| register | Registers for user interface screen changes. In register mode, the name of every screen accessed is listed. |
| get | Returns the registration state for screen change events when followed by the get parameter. |
| unregister | Unregisters from user interface screen changes. |
| "screen_name" | Changes the user interface to display the specified screen. The supported screens depend on the system configuration. To determine the name to use for a specific screen, navigate to that screen in the user interface and send the screen command. |

Feedback Examples

- screen
returns
screen: admin settings
if the Admin Settings screen is currently displayed in the user interface
- screen register
returns
screen registered
- screen monitors
returns
screen: monitors
and displays the Monitors screen in the user interface

screencontrol

Disables or enables navigation to specified user interface screens of the system.

Syntax

```
screencontrol enable <all |none| "screen_name">
screencontrol disable <all |none| "screen_name">
```

| Parameter | Description |
|---------------|--|
| enable | Enables navigation to the specified user interface screen(s). |
| all | All of the user interface screens. |
| none | None of the user interface screens. |
| "screen_name" | Name of a specific user interface screen. |
| disable | Disables navigation to the specified user interface screen(s). |

Feedback Examples

- screencontrol enable all
returns
screencontrol enable all success
- screencontrol disable adminsettings
returns
screencontrol disable adminsettings success
and disables navigation to the Admin Settings screen of the user interface
- screencontrol disable none
returns
screencontrol disable none success
and reverses all screen disable commands
- screencontrol disable main
returns
error: screen "main" unknown
screencontrol disable main failed
if "main" is an unknown screen name

See Also

Refer to the [screen](#) command on page [4-298](#) for details about accessing screen names.

serialnum

Returns the serial number of the system.

Syntax

serialnum

Feedback Examples

- serialnum
returns
serialnum 82065205E72EC1

servervalidatepeercert

Enables certificate validation by specifying whether the HDX system requires a browser to present a valid certificate when it tries to connect to the HDX web interface.

Syntax

```
serverval i datepeercert get  
serverval i datepeercert <yes|no>
```

| Parameter | Description |
|-----------|---|
| get | Returns the peer certificate validation setting for web servers. |
| yes | Enables peer certificate validation requirement for web servers. |
| no | Disables peer certificate validation requirement for web servers. |

Feedback Examples

- `serverval i datepeercert get`
`returns`
`serverval i datepeercert no`
- `serverval i datepeercert yes`
`returns`
`serverval i datepeercert yes`

Comments

After making a change, you must restart the system for the setting to take effect.

session

Names or finds an active API session.

Syntax

```
session name "session-name"  
session find "session-name"
```

| Parameter | Description |
|--------------|--|
| name | Names the current API session. |
| find | Finds an active API session for this system. |
| session-name | Unique string that identifies the session. |

Feedback Examples

- session name sessi onone
returns
session name sessi onone success
- If entered again,
session name sessi onone
returns
info: the supplied session name is already in use
session name sessi onone failed
- session find sessi onone
info: session sessi onone attached
- session find sessi ontwo
info: session sessi ontwo not connected

sessionenabled

Sets or gets the ability to monitor for and terminate inactive Polycom HDX web sessions.

Syntax

```
sessi onenabl ed get  
sessi onenabl ed <yes | no>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting for web sessions monitoring. |
| yes | Enables web session monitoring. |
| no | Disables web session monitoring. |

Feedback Examples

- sessi onenabl ed get
returns
sessi onenabl ed yes
- sessi onenabl ed yes
returns
sessi onenabl ed yes

Comments

When sessionenabled is set to yes, and a web session is started, the user must log in to each subsequent web request during the session.

setaccountnumber

Sets the account number when it is required for dialing out.

Syntax

setaccountnumber "account number"

| Parameter | Description |
|------------------|--|
| "account number" | Number that is needed to validate the account before dialing out. To erase the current setting, omit this parameter. |

Feedback Examples

- setaccountnumber 1234
returns
setaccountnumber 1234

Comments

The account number is saved in the Global Management System database and is generally assigned by the Global Management System administrator. The [requireacctnumtodial](#) command on page [4-288](#) and the [validateacctnum](#) command on page [4-347](#) must be enabled for this command to work. When you make a call, you will be prompted to enter your account number.

See Also

See the related [requireacctnumtodial](#) command on page [4-288](#) and [validateacctnum](#) command on page [4-347](#).

setpassword

Sets the admin password for the Polycom HDX system local admin account.

Syntax

```
setpassword admin room "currentacctpasswd" "newacctpasswd"
```

| Parameter | Description |
|---------------------|---|
| admin | Specifies the Polycom HDX system local admin account. |
| room | Changes the room password. |
| "currentacctpasswd" | The current account password. |
| "newacctpasswd" | The new account password. |

Feedback Examples

- setpassword admin room 123 456
returns
password changed
- setpassword admin room '' 456
returns
password changed
- setpassword admin room 123 ''
returns
password changed

Comments

If the account has no administrator room password, enter a pair of single quotes ('') to denote an empty password.

showpopup

Displays a message box in the user interface.

Syntax

showpopup "text to display"

| Parameter | Description |
|-------------------|--|
| "text to display" | Message to display to users. Enclose the text in quotation marks if it contains a space. |

Feedback Examples

- showpopup "The conference will resume in three minutes." returns
showpopup "The conference will resume in three minutes."
and displays the message box in the user interface

Comments

Sending this command displays the message as a popup dialog in the user interface, along with an alert tone.

sleep

Puts the system in sleep mode within 15 seconds and returns sleep.

Syntax

sleep

sleep <register|unregister>

| Parameter | Description |
|------------|--|
| sleep | Puts the system in sleep mode if not followed by other parameters. |
| register | Registers for sleep or wake events. |
| unregister | Unregisters from sleep or wake events. |

Feedback Examples

- sleep
returns
sleep
and puts the system in sleep mode within 15 seconds
- sleep register
returns
sleep registered
- If entered again,
sleep register
returns
info: event/notification already active: sleep
- sleep unregister
returns
sleep unregistered
- If entered again,
sleep unregister
returns
info: event/notification not active: sleep

See Also

To wake the system from sleep mode, use the [wake](#) command on page [4-362](#).

sleepText

Sets or gets the text to be displayed with the logo for 15 seconds as the system goes into sleep mode.

Syntax

```
sleepText get  
sleepText set ["text"]
```

| Parameter | Description |
|-----------|---|
| get | Returns the current text. |
| set | Sets the text to be displayed on the screen saver when followed by the "text" parameter. To erase the current setting, omit "text". |
| "text" | Screen saver text to be displayed when the system is in sleep mode. Enclose the text in quotation marks if it includes spaces. |

Feedback Examples

- sleepText set
returns
sleepText <empty>
- sleepText set "Pick up the remote control to use the system"
returns
sleepText "Pick up the remote control to use the system"

sleepetime

Sets or gets the wait time value before the system goes to sleep and displays the screen saver.

Syntax

```
sleepetime <get|0|1|3|15|30|60|120|240|480>
```

| Parameter | Description |
|----------------------------|--|
| get | Returns the current setting. |
| 0 1 3 15 30 60 120 240 480 | Sets the number of minutes from last user interaction to entering sleep mode. The default value is 3. A value of 0 indicates that the system will never go to sleep. |

Feedback Examples

- `sleepetime 30`
returns
`sleepetime 30`

snmpadmin

Sets or gets the SNMP administrator name.

Syntax

```
snmpadmin get
snmpadmin set ["admin name"]
```

| Parameter | Description |
|--------------|---|
| get | Returns the current setting. |
| set | Sets the administrator name when followed by the "admin name" parameter. To erase the current setting, omit "admin name". |
| "admin name" | SNMP administrator contact name. Character string. Enclose the character string in quotation marks if it includes spaces. Example: "John Admin" |

Feedback Examples

- snmpadmin set
returns
error: command needs more parameters to execute successfully
- snmpadmin set "John Admin"
returns
snmpadmin "John Admin"
- snmpadmin get
returns
snmpadmin "John Admin"

Comments

After making a change, you must restart the system for the setting to take effect.

snmpcommunity

Sets or gets the SNMP community name.

Syntax

```
snmpcommunity get  
snmpcommunity set ["community name"]
```

| Parameter | Description |
|------------------|---|
| get | Returns the current setting. |
| set | Sets the SNMP community name when followed by the "community name" parameter. To erase the current setting, omit the parameter. |
| "community name" | SNMP community name. Character string. Enclose the character string in quotation marks if it includes spaces. |

Feedback Examples

- snmpcommunity set
returns
snmpcommunity <empty>
- snmpcommunity set Public
returns
snmpcommunity Public
- snmpcommunity get
returns
snmpcommunity Public

Comments

After making a change, you must restart the system for the setting to take effect.

snmpconsoleip

Sets or gets the SNMP console IP address.

Syntax

```
snmpconsol ei p get  
snmpconsol ei p set ["xxx. xxx. xxx. xxx"]
```

| Parameter | Description |
|----------------------|---|
| get | Returns the current setting. |
| set | Sets the SNMP console IP address when followed by the "xxx. xxx. xxx. xxx" parameter. To erase the current setting, omit the parameter. |
| "xxx. xxx. xxx. xxx" | IP address of the console. |

Feedback Examples

- snmpconsol ei p set
returns
snmpconsol ei p <empty>
- snmpconsol ei p set 192.168.1.111
returns
snmpconsol ei p 192.168.1.111
- snmpconsol ei p get 192.168.1.111
returns
snmpconsol ei p 192.168.1.111

Comments

After making a change, you must restart the system for the setting to take effect.

snmplocation

Sets or gets the SNMP location name.

Syntax

```
snmplocation get  
snmplocation ["location name"]
```

| Parameter | Description |
|-----------------|---|
| get | Returns the current setting. |
| "location name" | SNMP location name. Enclose the location name in quotation marks if it includes spaces. To erase the current setting, omit the parameter. |

Feedback Examples

- snmplocation
returns
snmplocation <empty>
- snmplocation "Mary_Polycom in United States"
returns
snmplocation "Mary_Polycom in United States"
- snmplocation get
returns
snmplocation "Mary_Polycom in United States"

Comments

After making a change, you must restart the system for the setting to take effect.

snmpsystemdescription

Sets or gets the SNMP system description.

Syntax

```
snmpsystemdescription get  
snmpsystemdescription set ["system description"]
```

| Parameter | Description |
|----------------------|---|
| get | Returns the current setting. |
| set | Sets the SNMP system description when followed by the "system description" parameter. To erase the current setting, omit the parameter. |
| "system description" | SNMP system description. |

Feedback Examples

- snmpsystemdescription set
returns
snmpsystemdescription <empty>
- snmpsystemdescription set "videoconferencing system"
returns
snmpsystemdescription "videoconferencing system"
- snmpsystemdescription get
returns
snmpsystemdescription "videoconferencing system"

Comments

After making a change, you must restart the system for the setting to take effect.

snmptrapversion

Sets or gets the SNMP trap version.

Syntax

```
snmptrapversion get  
snmptrapversion set <v1|v2c>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| set | Sets the SNMP trap protocol that the system uses. |
| v1 v2c | SNMP trap version 1 or version 2c. |

Feedback Examples

- snmptrapversion set v1
returns
snmptrapversion v1
- snmptrapversion set v2c
returns
snmptrapversion v2c
- snmptrapversion get
returns
snmptrapversion v2c

Comments

After making a change, you must restart the system for the setting to take effect.

soundeffectsvolume

Sets, gets, or tests the volume level of the ring tone and user alert tone on the system.

Syntax

```
soundeffectsvolume get  
soundeffectsvolume set {0..10}  
soundeffectsvolume test
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting along with a test tone from the system at that volume level. |
| set | Sets the volume of sound effects. Requires a volume parameter in the range {0..10}. |
| test | Tests the volume of sound effects. |

Feedback Examples

- soundeffectsvolume set 6
returns
soundeffectsvolume 6
- soundeffectsvolume get
returns
soundeffectsvolume 6
- soundeffectsvolume test
returns
soundeffectsvolume test
and a tone is produced by the system

spidnum

Sets or gets the ISDN SPID numbers assigned to the BRI lines used by the system. This command is only applicable if you have a BRI network interface connected to your system.

Syntax

```
spi dnum get <all | 1b1|1b2|2b1|2b2|3b1|3b2|4b1|4b2>
spi dnum set <1b1|1b2|2b1|2b2|3b1|3b2|4b1|4b2> ["spi d number"]
```

| Parameter | Description |
|---------------------------------|---|
| get | Returns the current SPID number associated with a B channel of a particular line. |
| all | Returns SPIDs for all channels of all lines. |
| 1b1 1b2 2b1 2b2 3b1 3b2 4b1 4b2 | The line and B channel. Valid values are:
1b1BRI line 1, B channel 1
1b2BRI line 1, B channel 2
2b1BRI line 2, B channel 1
2b2BRI line 2, B channel 2
3b1BRI line 3, B channel 1
3b2BRI line 3, B channel 2
4b1BRI line 4, B channel 1
4b2BRI line 4, B channel 2 |
| set | Sets the SPID number for a B channel line when followed by the "number" parameter. To erase the current setting, omit "number". This parameter is not allowed while in a call. |
| "spi d number" | Numeric string. SPID numbers are generally provided by your network service provider. |

Feedback Examples

- spi dnum get all

returns

spi dnum 1b1 7005551212

spi dnum 1b2 7005552323

spi dnum 2b1 7005553434

spi dnum 2b2 7005554545

spi dnum 3b1 7005555656

spi dnum 3b2 7005556767

spi dnum 4b1 7005557878

spi dnum 4b2 7005558989

if 4 lines with channels 1b1 through 4b2 are attached in the above format.

- `spi dnum set 1b1`
returns
`spi dnum 1b1 <empty>`
- `spi dnum set 1b1 7005551212`
returns
`spi dnum 1b1 7005551212`

Comments

SPIDs generally apply only in the United States and Canada. If you are behind an internal phone system (PBX), SPIDs may not be required.

st

Sets or gets the st serial interface control signal (send timing: clock) setting. This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

```
st <get|normal |inverted>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| normal | Sets the signal to normal (falling edge sends data). |
| inverted | Sets the signal to inverted (rising edge sends data). |

Feedback Examples

- st normal
returns
st normal
- st inverted
returns
st inverted
- st get
returns
st inverted

Comments

The default setting is "normal".

sslverificationdepth

Specifies how many links a certificate chain can have.

Syntax

```
ssl verifi cati ondepth get  
ssl verifi cati ondepth set {0..12}
```

| Parameter | Description |
|-------------|---|
| get | Returns the current setting. |
| set {0..12} | Sets the number of links a certificate chain can have.
Valid values are {0..12}. |

Feedback Examples

- `ssl verifi cati ondepth get`
returns
`ssl verifi cati ondepth 3`
- `ssl verifi cati ondepth set 5`
returns
`ssl verifi cati ondepth 5`

Comments

After making a change, you must restart the system for the setting to take effect.

subnetmask

Sets or gets the subnet mask of the system.

Syntax

```
subnetmask get  
subnetmask set ["xxx. xxx. xxx. xxx"]
```

| Parameter | Description |
|----------------------|---|
| get | Returns the current subnet mask. |
| set | Sets the subnet mask of the system when followed by the "xxx. xxx. xxx. xxx" parameter. To erase the current setting, omit "xxx. xxx. xxx. xxx". This parameter is not allowed while in a call. |
| "xxx. xxx. xxx. xxx" | Subnet mask of the system. |

Feedback Examples

- subnetmask set 255. 255. 255. 0
returns
subnetmask 255. 255. 255. 0
- subnetmask get
returns
subnetmask 255. 255. 255. 0

Comments

After making a change, you must restart the system for the setting to take effect.

sysinfo

Sets or gets registration for ISDN, IP, and gatekeeper status notifications.

Syntax

`sysinfo <get|register|unregister>`

| Parameter | Description |
|------------|---|
| get | Returns registration status. |
| register | Registers the shell session to receive ISDN, IP, and gatekeeper status notifications. |
| unregister | Unregisters the shell session for ISDN, IP, and gatekeeper status notifications. |

Feedback Examples

- `sysinfo register`
returns
`sysinfo registered`
- `sysinfo unregister`
returns
`sysinfo unregistered`
- `sysinfo get`
returns
`sysinfo unregistered`

The following are examples of notifications of status changes in ISDN lines that may be returned after registering to receive sysinfo notifications.

- `linestate: isdnline[1] down`
- `linestate: isdnline[2] down`
- `linestate: isdnline[3] up`
- `linestate: isdnline[4] up`
- `linestate: isdnline[1] up`
- `linestate: isdnline[3] down`
- `linestate: isdnline[4] down`
- `linestate: isdnline[2] up`

systemname

Sets or gets the name of the system.

Syntax

```
systemname get  
systemname set "system name"
```

| Parameter | Description |
|---------------|--|
| get | Returns the current setting. |
| set | Sets the system name to "system name". |
| "system name" | Character string specifying the system name. Enclose the string in quotation marks if it includes spaces.
Example: "Polycom HDX Demo" |

Feedback Examples

- systemname set "Polycom HDX Demo"
returns
systemname "Polycom HDX Demo"
- systemname set get
returns
systemname "Polycom HDX Demo"

Comments

The first character must be a numeric (a digit) or alphabetic (a letter) character including foreign language characters. The name can be any combination of alphanumeric characters and may be up to 30 characters in length. The system name cannot be blank.

systemsetting telnetenabled

Sets or gets the telnet ports.

Syntax

systemsetting get telnetenabled

systemsetting telnetenabled <on|off|port24only>

| Parameter | Description |
|------------|---------------------------------------|
| get | Returns the current setting. |
| on | Enables port 23 and port 24. |
| off | Disables port 23 and port 24. |
| port24only | Enables port 24 and disables port 23. |

Feedback Examples

- systemsetting telnetenabled on
returns
systemsetting telnetenabled on
- systemsetting get telnetenabled
returns
systemsetting telnetenabled on

Comments

After making a change, you must restart the system for the setting to take effect.

If a security profile is enabled on the system, you cannot activate telnet ports.

tcports

Sets or gets the TCP ports on the system.

Syntax

```
tcports get  
tcports set [{1024..49150}]
```

| Parameter | Description |
|-----------|--|
| set | Sets the TCP ports when followed by a value from the range {1024..49150}. To erase the current setting, omit the value. This parameter is not allowed while in a call. |
| get | Returns the current TCP port setting. |

Feedback Examples

- tcports set 3233
returns
tcports 3233
- tcports get
returns
tcports 3233

Comments

The **Fixed Ports** option on the Firewall screen must be selected for the **TCP Ports** option to be available.

techsupport

Sends your phone number to Global Management System technical support if your system is managed by the Global Management System.

Syntax

techsupport <"phone num">

| Parameter | Description |
|-------------|--|
| "phone num" | Phone number at which the user of this system will be contacted. To obtain rapid assistance, include the area code with the phone number. Enclose the string in quotation marks if it includes spaces. Example: "408 555 2323" |

Feedback Examples

- techsupport "408 555 2323"
returns
techsupport will contact you at 408 555 2323

Comments

The Support icon is visible only when the system is registered with the Polycom Global Management System.

teleareacode

Sets or gets the system's area code.

Syntax

```
tel eareacode get  
tel eareacode set ["tel ephone_area_code"]
```

| Parameter | Description |
|------------------------|---|
| get | Returns the current setting. |
| set | Sets the system's area code when followed by the "tel ephone_area_code" parameter. To erase the current setting, omit the "tel ephone_area_code" parameter. |
| "tel ephone_area_code" | System's area code. |

Feedback Examples

- tel eareacode set
returns
tel eareacode <empty>
- tel eareacode set 408
returns
tel eareacode 408
- tel eareacode get
returns
tel eareacode 408

telenumber

Sets or gets the system's telephone number.

Syntax

```
tel enumber get  
tel enumber set ["tel ephone_number"]
```

| Parameter | Description |
|---------------------|---|
| get | Returns the current setting. |
| set | Sets the telephone number when followed by the "tel ephone number" parameter. To erase the current setting, omit the parameter. |
| "tel ephone_number" | System's telephone number. Enclose the string in quotation marks if it includes spaces. Example: "408 555 2323" |

Feedback Examples

- tel enumber set
returns
tel enumber <empty>
- tel enumber set "408 555 2323"
returns
tel enumber "408 555 2323"
- tel enumber get
returns
tel enumber "408 555 2323"

telnetechoeol

Sets the echo end-of-line (EOL) characters to the default values of either the API echo or the serial port echo.

Syntax

```
tel netechoeol <get|crnl |nl cr>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting for the end of line echo characters. |
| crnl | Sets the echo EOL characters to <CR><LF>. |
| nl cr | Sets the echo EOL characters to <LF><CR>. |

Feedback Examples

- tel netechoeol get
returns
tel netechoeol crnl
- tel netechoeol crnl
returns
tel netechoeol crnl
- tel netechoeol nl cr
returns
tel netechoeol nl cr

timediffgmt

Sets or gets the time difference from where the system is installed and Greenwich Mean Time (GMT). This allows the Global Management System to view the local time of the managed system.

Syntax

```
ti medi ffgmt <get|{-12:00..+12:00}>
```

| Parameter | Description |
|------------------|--|
| get | Returns the current setting. |
| {-12:00..+12:00} | Sets the time difference from GMT to this value. +00:00 is GMT time. |

Feedback Examples

- ti medi ffgmt -06: 00
returns
ti medi ffgmt -06: 00 success
- ti medi ffgmt get
returns
ti medi ffgmt -06: 00 success

typeofservice

Sets or gets the type of service for Quality of Service.

Syntax

```
typeofservice <get|ipprecedence|diffserv>
```

| Parameter | Description |
|--------------|--------------------------------|
| get | Returns the current setting. |
| ipprecedence | Selects IP precedence service. |
| difffserv | Selects DiffServ service. |

Feedback Examples

- `typeofservice difffserv`
returns
`typeofservice difffserv`
- `typeofservice ipprecedence`
returns
`typeofservice ipprecedence`
- `typeofservice get`
returns either
`typeofservice ipprecedence`
or
`typeofservice difffserv`

See Also

See the [ipprecaudio](#), [ipprecfecc](#), [ipprecvideo](#) command on page [4-197](#) and the [diffservaudio](#), [diffservfecc](#), [diffservvideo](#) command on page [4-100](#).

udpports

Sets or gets the UDP ports on the system.

Syntax

```
udpports get  
udpports set [{1024..49150}]
```

| Parameter | Description |
|-----------|--|
| get | Returns the current UDP port setting. |
| set | Sets the UDP ports when followed by a value from the range {1024..49150}. To erase the current setting, omit the value. This parameter is not allowed while in a call. |

Feedback Examples

- udpports set 3230
returns
udpports 3230
- udpports get
returns
udpports 3230

Comments

The Fixed Ports option on the Firewall screen must be selected for the UDP Ports option to be available.

unregisterall (deprecated)

Alias for the **all unregister** command.

Syntax

unregisterall

Feedback Examples

- unregisterall
returns
callstate unregistered
camera unregistered
linestate unregistered
mute unregistered
pi p unregistered
popup unregistered
popuinfo unregistered
preset unregistered
screen unregistered
vcbutton unregistered
volume unregistered
sleep unregistered
phone unregistered
video unregistered
vcstream unregistered
vc pod unregistered
vc lan unregistered

See Also

This command is an alias for the preferred [all unregister](#) command on page [4-21](#).

To register for user feedback, use the [all register](#) command on page [4-19](#) or the [registerall \(deprecated\)](#) command on page [4-284](#).

usefixedports

Sets or gets the Fixed Ports configuration.

Syntax

usefi xedports <get|yes|no>

| Parameter | Description |
|-----------|----------------------------------|
| get | Returns the current setting. |
| yes | Enables the use of Fixed Ports. |
| no | Disables the use of Fixed Ports. |

Feedback Examples

- usefi xedports yes
returns
usefi xedports yes
- usefi xedports no
returns
usefi xedports no
- usefi xedports get
returns
usefi xedports no

usegatekeeper

Sets or gets the gatekeeper mode (off, specify, or auto).

Syntax

`usegatekeeper <get|off|specify|auto>`

| Parameter | Description |
|-----------|--|
| get | Returns the current setting.
Note: A gatekeeper is not required to make IP-to-IP LAN calls. In these situations, select the off option. |
| off | Select this option if no gatekeeper is required or if you make IP-to-IP LAN calls. |
| specify | Specifies a gatekeeper.
If this option is selected, you must enter the gatekeeper IP address or name using the gatekeeperip command on page 4-144 . |
| auto | Sets the system to automatically find an available gatekeeper. |

Feedback Examples

- `usegatekeeper off`
returns
`usegatekeeper off`
- `usegatekeeper specify`
returns
`usegatekeeper specify`
- `usegatekeeper auto`
returns
`usegatekeeper auto`
- `usegatekeeper get`
returns
`usegatekeeper auto`

See Also

See the [gatekeeperip](#) command on page [4-144](#).

usepathnavigator

Sets or gets the Polycom PathNavigator™ mode, Polycom ReadiManager® SE200 mode, or Polycom Converged Management Application™ (CMA®) mode if the PathNavigator, ReadiManager, or Polycom CMA system is used with the Polycom HDX system.

Syntax

```
usepathnavigator <get|always|never|required>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| always | Always use the Conference on Demand feature available with the PathNavigator, ReadiManager, or Polycom CMA system to place a multipoint call. Never use the Polycom HDX system's internal multipoint capability. |
| never | Never use the Conference on Demand feature available with the PathNavigator, ReadiManager, or Polycom CMA system to place a multipoint call. Use the Polycom HDX system's internal multipoint capability instead. |
| required | This is the default. When this option is selected, the multipoint call is handled by the Polycom HDX system's internal multipoint capability if possible; otherwise, the multipoint call is handled through the Conference on Demand feature available with the PathNavigator, ReadiManager, or Polycom CMA system. |

Feedback Examples

- usepathnavigator always
returns
usepathnavigator always
- usepathnavigator never
returns
usepathnavigator never
- usepathnavigator required
returns
usepathnavigator required
- usepathnavigator get
returns
usepathnavigator required

Comments

This option is only accessible if the PathNavigator, ReadiManager, or Polycom CMA system is used.

The PathNavigator uses the Polycom MGC™ and can handle video conferences with more participants and higher speeds than a Polycom HDX system's internal multipoint capability.

The PathNavigator, ReadiManager, and Polycom CMA systems support ad-hoc multipoint video conferencing through the Conference on Demand feature, which allows users to bring multiple endpoints together in a video conference on an unscheduled basis. It allows users to place multipoint video calls to remote participants by only using their names and/or the numbers that correspond to those remote locations.

useroompassword

Sets or gets the Use Room Password for Remote Access setting.

Syntax

```
useroompassword get  
useroompassword <yes | no>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| no | Configures the system to use a separate room password and remote access password. |
| yes | Configures the system to use the same password for room and remote access. |

Feedback Examples

- useroompassword yes
returns
useroompassword yes
- useroompassword no
returns
useroompassword no
- useroompassword get
returns
useroompassword no

v35broadcastmode

Sets or gets the V.35 broadcast mode. This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

```
v35broadcastmode <get|on|off>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| on | Turns on V.35 broadcast. This parameter is not allowed while in a call. |
| off | Turns off V.35 broadcast. This parameter is not allowed while in a call. |

Feedback Examples

- v35broadcast on
returns
v35broadcast on
- v35broadcast off
returns
v35broadcast off
- v35broadcast get
returns
v35broadcast off

v35dialingprotocol

Sets or gets the V.35 dialing protocol. This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

```
v35dialingprotocol <get | rs366>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| rs366 | Enables RS-366 as the dialing protocol. At this time, RS-366 is the only supported dialing protocol on the system. |

Feedback Examples

- v35dialingprotocol rs366
returns
v35dialingprotocol rs366
- v35dialingprotocol get
returns
v35dialingprotocol rs366

Comments

Selecting a dialing protocol is not needed if you are using your DCE to dial the call or if you have a dedicated connection to the far site.

v35num

Sets or gets the ISDN video numbers assigned to the system. This command is only applicable if you have a V.35 network interface connected to your system.

Syntax

```
v35num get <1b1|1b2>
v35num set <1b1|1b2> ["v35 number"]
```

| Parameter | Description |
|--------------|---|
| get | Returns the current ISDN video number associated with a B channel of a particular line. Requires <1b1 1b2>. |
| 1b1 1b2 | B1 and B2 channels:
1b1 designates line 1, B channel 1 (B1).
1b2 designates line 1, B channel 2 (B2). |
| set | Sets the ISDN video number for a B channel line when followed by a "v35 number" parameter. To erase the current setting, omit the "v35 number" parameter. 1b1 is port 1 and 1b2 is port 2. This parameter is not allowed while in a call. |
| "v35 number" | Numeric string. This is the ISDN video number(s) provided by your network service provider. |

Feedback Examples

- v35num set 1b1
returns
v35num 1b1 <empty>
- v35num set 1b2 7005551212
returns
v35num 1b2 7005551212
- v35num get 1b2
returns
v35num 1b2 7005551212

Comments

The 1b1 and 1b2 parameters follow the convention and nomenclature of the user interface and the [isdnnum](#) command on page [4-209](#).

See Also

See the [isdnnum](#) command on page [4-209](#).

v35portsused

Sets or gets the number of ports to use on the V.35/RS-449/RS-530 network interface module.

Syntax

v35portsused <get|1|1+2>

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| 1 | Selects one port for one-channel calls. |
| 1+2 | Selects two ports for two-channel calls (2 x 56 kbps or 2 x 64 kbps). |

Feedback Examples

- v35portsused 1
returns
v35portsused 1
- v35portsused 1+2
returns
v35portsused 1+2
- v35portsused get
returns
v35portsused 1+2

v35prefix

Sets or gets the V.35 dialing prefix. It assumes that a profile has already been selected.

Syntax

```
v35prefix get "val id speed"
v35prefix set "val id speed" ["value"]
```

| Parameter | Description |
|----------------|--|
| get | Returns the current setting for "val id speed". |
| set | Sets the V.35/RS-449/RS-530 prefix when followed by a "value" parameter. To erase the current setting, omit the "value" parameter. |
| "val id speed" | Valid speeds are 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 28x64, 1856, 1920, all. The parameter "all" lists all the available speeds and their associated dialing prefixes. |
| "value" | V.35/RS-449/RS-530 prefix, which is a function of your DCE. Consult the DCE user guide for information. |

Feedback Examples

- v35prefix set 56
returns
v35prefix 56 <empty>
- v35prefix set 112 "#005"
returns
v35prefix 112 "#005"
and associates the dialing prefix 005 with the speed 112
- v35prefix get 112
returns
v35prefix 112 "#005"

See Also

See the [v35profile](#) command on page [4-345](#).

v35profile

Sets or gets a V.35 profile associated with dialing through a DCE. It can also display all the settings (speed, prefix or suffix) of the current profile.

Syntax

```
v35profile
<get|adtran|adtran_isu512|ascend|ascend_vsx|ascend_max|avaya_mcu|
custom_1|fvc.com|initial|lucent_mcu|madge_tel eos>
```

| Parameter | Description |
|---|---|
| get | Returns the current profile. |
| adtran adtran_isu512 ascend ascend_vsx ascend_max avaya_mcu custom_1 fvc.com initial lucent_mcu madge_tel eos | V.35/RS-449/RS-530 profile (equipment/manufacturer) available.
Consult your DCE user guide for additional information on setting dialing profiles. |

Feedback Examples

- v35profile adtran_isu512
returns
v35profile adtran_isu512
selects adtran_isu512 as the profile
- v35profile get
returns
v35profile adtran_isu512

v35suffix

Sets or gets the V.35 dialing suffix. It assumes that a profile has already been selected.

Syntax

```
v35suffix get "valid speed"
v35suffix set "valid speed" ["value"]
```

| Parameter | Description |
|---------------|--|
| get | Returns the current setting for valid speed. |
| set | Sets the dialing suffix when followed by a "value" parameter. To erase the current setting, omit the "value" parameter. |
| "valid speed" | Valid speeds are 56, 64, 2x56, 112, 2x64, 128, 168, 192, 224, 256, 280, 320, 336, 384, 392, 7x64, 504, 512, 560, 576, 616, 640, 672, 704, 728, 768, 784, 832, 840, 14x64, 952, 960, 1008, 1024, 1064, 1088, 1120, 1152, 1176, 1216, 1232, 1280, 1288, 21x64, 1400, 1408, 1456, 1472, 1512, 1536, 1568, 1600, 1624, 1664, 1680, 1728, 28x64, 1856, 1920, all. The parameter "all" lists all the available speeds and their associated dialing prefixes. |
| "value" | The dialing suffix, which is a function of your DCE. Consult the DCE user guide for information. |

Feedback Examples

- v35suffix set 128
returns
v35suffix 128 <empty>
- v35suffix set 128 "#4#2"
returns
v35suffix 128 #4#2
and associates the dialing suffix #4#2 with the speed 128
- v35suffix get 128
returns
v35suffix 128 #4#2

See Also

See the [v35profile](#) command on page [4-345](#).

validateacctnum

Sets or gets the validation for the Global Management System account number that is used when dialing out.

Syntax

```
val i dateacctnum <get|yes|no>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| yes | Enables the Global Management System account number validation option. |
| no | Disables the Global Management System account number validation option. |

Feedback Examples

- val i dateacctnum yes
returns
val i dateacctnum yes
- val i dateacctnum no
returns
val i dateacctnum no
- val i dateacctnum get
returns
val i dateacctnum no

Comments

When the call connects, the system verifies that the account exists with the Global Management System server. If the account does not exist, the call is disconnected.

This option is only available if **Required Account Number to Dial** is enabled.

vcbutton

Controls a content video source. It can also register or unregister the API session to receive notification of content events.

Syntax

```
vcbutton play {2..5}
vcbutton <get|stop|register|unregister>
vcbutton map <get|{2..5}>
vcbutton source get
```

| Parameter | Description |
|------------|--|
| play | Starts sending the content from the specified content video source. If no content video source is specified, starts sending content from the default content video source. Starts content from any content video source without the need to change source mapping and without needing to stop the currently playing content video source. Fails and does not stop the current content video source if the specified content video source is not valid. Stops the current content video source if the specified content video source is valid but is currently unavailable. |
| {2..5} | Specifies a content video source. |
| get | Returns the current setting (play or stop). |
| stop | Stops sending content from the content video source that is currently playing. |
| register | Registers the API session to receive notifications about content events. |
| unregister | Unregisters the API session to receive notifications about content events. |
| map get | Gets the content video source currently specified for control. |
| map {2..5} | Specifies the content video source to control.
Note: This parameter is only necessary if no video source was specified when using the vcbutton play command. |
| source get | Gets the content video source that is currently playing. |

Feedback Examples

If not registered for notifications:

- vcbbutton play 4
returns
vcbbutton play 4
vcbbutton play succeeded
camera near 4

If registered for notifications:

- vcbbutton play 4
returns
Control event: vcbbutton play
Control event: vcbbutton source 4
Control event: vcbbutton play
vcbbutton play 4
vcbbutton play succeeded
camera near 4
- vcbbutton play 5
returns
vcbbutton play failed
- vcbbutton play
returns
Control event: vcbbutton play
vcbbutton play succeeded
- vcbbutton play
returns
vcbbutton play failed
- vcbbutton play 2
returns
error: input 2 is not a content source
vcbbutton play failed
- vcbbutton play 7
returns
error: invalid value! (valid ranges 2..6)
vcbbutton play failed
- vcbbutton register
returns
vcbbutton registered
- vcbbutton stop
returns
Control event: vcbbutton stop
Camera near none
vcbbutton stop
vcbbutton stop succeeded

- `vcbutton get`
returns
`vcbutton stop`
`vcbutton get succeeded`
- `vcbutton source get`
returns
`vcbutton source get 1`
`vcbutton source get succeeded`
- `vcbutton source get`
returns
`vcbutton source get none`
`vcbutton source get succeeded`

Polycom recommends registering for notifications. If `vcbutton register` is used for notifications, the following responses occur.

- Pressing the play button at the far site
returns
Control event: `vcbutton farplay`
- Pressing the stop button on the local system
returns
Control event: `vcbutton stop`

Comments

The `vcbutton stop` command is global in Polycom HDX software version 2.0 or later. Previously, this command was specific to the content video source to which it was mapped.

vcraudioout

Enables, disables, or gets the **VCR Audio Out Always On** setting.

Syntax

```
vcraudi oout <get|yes|no>
```

| Parameter | Description |
|-----------|-----------------------------------|
| get | Returns the current setting. |
| yes | Enables VCR Audio Out Always On. |
| no | Disables VCR Audio Out Always On. |

Feedback Examples

- vcraudi oout yes
returns
vcraudi oout yes
- vcraudi oout no
returns
vcraudi oout no
- vcraudi oout get
returns
vcraudi oout no

vcrrecordsource

Sets or gets the VCR/DVD record source.

Syntax

```
vcrrecordsource get
vcrrecordsource <near|far|auto|content|content-or-near|
content-or-far|content-or-auto|none>
```

| Parameter | Description |
|-----------------|--|
| get | Returns the current setting. |
| near | Sets the VCR to record the near-site video source. |
| far | Sets the VCR to record the far-site video source. |
| auto | Sets the VCR to automatically record the current speaker in a point-to-point call. |
| content | Sets the VCR to record content, when presented. |
| content-or-near | Sets the VCR to record near-site video or content, when presented. |
| content-or-far | Sets the VCR to record far-site video or content, when presented. |
| content-or-auto | Sets the VCR to record the current speaker or content, when presented. |
| none | Sets the VCR to record nothing. |

Feedback Examples

- vcrrecordsource near
returns
vcrrecordsource near
- vcrrecordsource content-or-auto
returns
vcrrecordsource content-or-auto
- vcrrecordsource get
returns
vcrrecordsource content-or-auto

version

Returns the current system's version information.

Syntax

version

Feedback Examples

- version
returns
version "release 2.5 - 30Nov2008 11:30"

vgaqualitypreference

Sets or gets the bandwidth split for people and content video.

Syntax

```
vgaqual i typreference get  
vgaqual i typreference <content|peopl e|both>
```

| Parameter | Description |
|-----------|---|
| get | Returns the current setting. |
| content | Sets the VGA quality preference to content video. |
| peopl e | Sets the VGA quality preference to people video. |
| both | Sets the VGA quality preference to both people and content video. |

Feedback Examples

- vgaqual i typreference peopl e
returns
vgaqual i typreference peopl e
- vgaqual i typreference content
returns
vgaqual i typreference content
- vgaqual i typreference both
returns
vgaqual i typreference both
- vgaqual i typreference get
returns
vgaqual i typreference both

videocallorder

Sets the video call order of the specified protocol to the specified slot.

Syntax

```
vi deocal l order <i sdn|h323|si p|gateway323> <1|2|3|4>
```

| Parameter | Description |
|------------|--|
| i sdn | Specifies ISDN protocol. |
| h323 | Specifies IP protocol. |
| si p | Specifies SIP protocol. |
| gateway323 | Specifies H.323 gateway calling. |
| 1 2 3 4 | Sets the order in which the specified protocol is attempted when a video call is placed. |

Feedback Examples

- vi deocal l order h323 1
returns
vi deocal l order h323 1
- vi deocal l order i sdn 2
returns
vi deocal l order i sdn 2

See Also

To set the dialing order for audio-only protocols, use the [voicecallorder](#) command on page [4-356](#).

voicecallorder

Sets the voice call order of the specified protocol to the specified slot.

Syntax

```
voi cecal l order <i sdn_phone|pots> <1|2>
```

| Parameter | Description |
|-------------|--|
| i sdn_phone | Specifies ISDN phone line. |
| pots | Specifies analog phone line. |
| 1 2 | Sets the order in which the specified method is attempted when a voice call is placed. Positions 1-2 are relative and are shown as 3-4 in the user interface if video protocols are enabled. |

Feedback Examples

- *voi cecal l order pots 1*
 returns
 voi cecal l order pots 1
- *voi cecal l order i sdn_phone 1*
 returns
 voi cecal l order i sdn_phone 1

See Also

To set the dialing order for video protocols, use the [videocallorder](#) command on page [4-355](#).

volume

Sets or gets the call audio volume (not sound effects) on the system or registration for volume changes.

Syntax

```
volume <register|unregister>
volume <get|up|down|set {0..50}>
volume range
```

| Parameter | Description |
|------------|---|
| register | Registers to receive notification when the volume changes. |
| unregister | Disables register mode. |
| get | Returns the current volume level. |
| up | Increases the audio volume by 1. |
| down | Decreases the audio volume by 1. |
| set | Sets the volume to a specified level. Requires a volume setting from {0..50}. |
| range | Returns the valid volume range available to the user. |

Feedback Examples

- volume register
returns
volume registered
- If entered again,
volume register
returns
info: event/notification already active: volume
- volume set 23
returns
volume 23
- volume up
returns
volume 24
- volume get
returns
volume 24

Comments

Changes the call audio volume (not sound effects) on the system.

vortex

Sends commands to a Polycom Vortex mixer.

Syntax

```
vortex <0|1> mute <on|off>
vortex <0|1> forward "vortex_macro"
```

| Parameter | Description |
|----------------|---|
| 0 1 | Specifies the serial port to which the Vortex mixer is connected. |
| mute | Sets the mute state for the Vortex mixer connected to the specified serial port. |
| on | Mutes the Vortex mixer. |
| off | Unmutes the Vortex mixer. |
| forward | Fowards the vortex_macro to the Vortex mixer connected to the specified serial port. |
| "vortex_macro" | Specifies the Vortex mixer macro command to send. For more information about these commands, refer to the Vortex documentation. |

Feedback Examples

The response from the Vortex is returned in the following format:
 vortex <portnum> forward <vortexcmd>: <vortexresponse>

- vortex 0 forward FOOPI NG
 returns
 vortex 0 forward FOOPI NG: FOOPOONG
 if the Vortex responds and
 vortex 0 forward FOOPI NG: fail ed
 if the Vortex does not respond
- vortex 1 mute on
 returns
 vortex 1 mute on
 and mutes the Vortex connected to the second serial port on the back of the system

Comments

The Vortex commands are applicable when you have a Vortex mixer connected to a system. An API client can send these commands to control a Vortex mixer using the command format:

`vortex <portnum> forward <vortexcmd>`

where `<portnum>` is 0 if the Vortex is connected to the first serial port or 1 if the Vortex is connected to the second serial port, and `<vortexcmd>` is a Vortex-specific command. Whatever value is passed in this parameter will be sent to the Vortex.

waitfor

This command is used within script files or control panel programs to wait for a specific event before executing the next statement. It causes the API session to wait until a call being placed either connects or fails, or until system is ready to place a call (such as after a reboot waiting for the ISDN lines to come up).

Syntax

```
waitfor <callcomplete|systemready>
```

| Parameter | Description |
|--------------|--|
| callcomplete | Causes the API session to wait until a call being placed either connects or fails. |
| systemready | Causes the system to return the message "system is ready" when the system is ready to make a call. |

Feedback Examples

- `waitfor callcomplete`
returns
waiting for call complete
and returns
call is complete
when the call either connects or fails
- `waitfor systemready`
returns
waiting for system ready
and returns
system is ready
when the system is ready to make a call

Comments

This command can be used to synchronize a remote controller with the system. The API session echoes the message "call complete" when the call connects or is aborted.

wake

Wakes the system from sleep mode.

Syntax

wake

Feedback Examples

- wake
returns
wake
and wakes the system from sleep mode

See Also

To put the system in sleep mode, use the [sleep](#) command on page [4-307](#).

wanipaddress

Sets or gets the WAN IP address.

Syntax

```
wani paddress get  
wani paddress set ["xxx. xxx. xxx. xxx"]
```

| Parameter | Description |
|----------------------|---|
| set | Sets the WAN IP address when followed by the "xxx. xxx. xxx. xxx" parameter. To erase the current setting, omit the "xxx. xxx. xxx. xxx" parameter. |
| get | Returns the WAN IP address. |
| "xxx. xxx. xxx. xxx" | WAN IP address. |

Feedback Examples

- wani paddress set 192.168.1.101
returns
wani paddress 192.168.1.101
- wani paddress get
returns
wani paddress 192.168.1.101

Comments

The **NAT Configuration** option on the Firewall screen must be set to **Auto**, **Manual**, or **UPnP** for this option to be available.

webmonitoring

Enables or disables the ability to view video from a Polycom HDX system via the web interface. This command is available in serial API sessions only.

Syntax

```
webmonitoring "remoteaccesspasswd" <yes|no>
```

| Parameter | Description |
|----------------------|---|
| "remoteaccesspasswd" | Current remote access password. |
| yes | Allows Polycom HDX video to be viewed via the web interface. |
| no | Disables Polycom HDX video from being viewed via the web interface. |

Feedback Examples

- webmonitoring "1234" yes
returns
webmonitoring yes
- webmonitoring "1234" no
returns
webmonitoring no

Comments

The webmonitoring setting can be controlled by a provisioning server. For this reason, provisioned systems do not allow modification to the webmonitoring setting.

webmonitoring has no 'get' operation. Use the [remotemonenable](#) command on page [4-287](#) instead.

If the system has no remote access password, enter a pair of single quotes ('') to denote an empty password.

webport

Sets or gets the port to use when accessing the system using the web interface.

Syntax

```
webport get  
webport set "port"
```

| Parameter | Description |
|-----------|-------------------------------------|
| get | Returns the current setting. |
| set | Sets the web access port to "port". |

Feedback Examples

- webport set 80
returns
webaccessport 80
- webport get
returns
webaccessport 80

Comments

If you change this from the default (port 80), you will need to include the port number with the IP address when you use the web interface to access the system. This makes unauthorized access more difficult. After making a change, you must restart the system for the setting to take effect.

whitelistenable

Enables or disables the ability to restrict a Polycom HDX system's access to only those systems with IP addresses that match one of the addresses or patterns specified in the whitelist.

Syntax

```
whitelistenable get  
whitelistenable <yes|no>
```

| Parameter | Description |
|-----------|--|
| get | Returns the current setting. |
| yes | Allows the Polycom HDX system to access only those systems with IP addresses that match one of the addresses or patterns specified in the whitelist. |
| no | Allows the Polycom HDX system to access systems with IP addresses that are not specified in the whitelist. |

Feedback Examples

- `whitelistenable get`
returns
`whitelistenable no`
- `whitelistenable yes`
returns
`whitelistenable yes`

Comments

The system will restart when the `whitelistenable` setting is modified.

whoami

Displays the same initial banner information as when the RS-232/Telnet session was started with the system.

Syntax

whoami

Feedback Examples

- whoami
returns
Hi , my name is: Polycom HDX Demo
Here is what I know about myself:
Model : HDX9004
Serial Number: 82065205E72EC1
Software Version: 2.5
Build Information: root on domain.polycom.com
Contact Number: <empty>
Time In Last Call: 0:43:50
Total Time In Calls: 87:17:17
Total Calls: 819
SNTP Time Service: auto insync ntp1.polycom.com

Room Design and Layout

*Reprinted from the Basics of Audio and Visual Systems Design: Revised Edition, Chapter 12, "Videoconferencing" written by Scott Sharer, CTS, and Jim Smith, CVE, CTS, copyright 2003, with permission of InfoComm International®
www.infocomm.org*

For clarity of discussion, we have divided this section into the following sub-sections:

- Room construction, including wall construction, windows and window treatments, ceilings and HVAC;
- Interior design and finishes;
- Furniture design, including placement and layout;
- Room acoustics and acoustic treatment; and
- Room lighting.

The initial layout and construction of the space affects all the elements that are discussed in other sections of this book [*Basics of Audio and Visual Systems Design*], including acoustic characteristics and performance, general and ambient light control, and overall comfort.

Room Requirements

We begin with general room requirements. The total floor space required for VC is much greater than we have become used to for general local presentation and meeting. In architectural terms it is not uncommon to find a rule-of-thumb applied that allows for up to 15 square feet of floor space per participant in a traditional presentation or meeting room. If there is a front-of-room presenter position at a podium, and if there is some use of in-room technology (projection devices, whiteboards, etc.), then this figure may increase to as much as 20 square feet of floor space per participant, but rarely any more than that.

It is here that we have our first conflict. In videoconferencing we have to consider not only the issues related to local viewing and hearing but also the issues of being seen and heard by people at the far-end of the connection. This

means that we must consider sight lines and angles of participant interaction that go beyond traditional presentation environments. As a rule we should allow not less than 30 square feet and generally not more than 45 square feet of floor space per participant in a videoconference space. Though two to three times what we are used to allowing, this amount ensures that local participants will see one another and the display of local and remote electronic images. It also ensures that participants at the far-end will see and hear everyone arriving at their location via the connection, and that all will see and hear at a level of quality that does not detract and, in the best deployment, even enhances the communications.

Having determined the required size of the space, we can move on to the actual renovation or construction of the space itself. Again the requirements here are generally less forgiving than those applied in local-only meeting spaces. In the most basic sense this is because, by sheer definition, at least some of the participants in a conference-based meeting are not actually in the room. As such, we cannot count on the typical human mechanisms (the human ears and brain and our ability to locate sound in three-dimensional space) to manage any acoustic anomalies.

If we are, for example, in a room that is adjacent to a double-door entry to the building, then knowing this we can take the inevitable doorway noise into account as we filter the sounds we hear both inside the meeting room and coming from that adjacent entryway. Within our own physical and local environment we have the ability to isolate local unwanted noise from local "sound of interest" (voices of other people, etc.), and place the unwanted noise in an inferior position in our conscious thought pattern. We are able to do this because we know where the noise is coming from and (usually) what is causing it. We may be annoyed by the noise, but we generally are able to ignore it. As soon as we add conferencing to the meeting equation, however, we add the element of electronic pickup and reproduction of all sounds. For the people at the far-end, the unwanted noise is much more difficult (if not impossible) to ignore. They do not have the ability to isolate it in three-dimensional space (the microphones eliminate the spatial reference) and they often do not know what is making the noise. The brain of the far-end participant will devote more and more conscious observation and thought energy to trying to work out these elements, in an attempt to isolate and finally "ignore" the unwanted sound. We have already stated that they cannot do this, however, due to the electronic separation between the locations. Thus they are left with an impossible task that takes up more and more thought energy, eroding the perceived quality of the spoken communication over time. Frustration and exasperation quickly set in, and the communication flow quickly falls apart.

This, then, is one reason we must pay even greater attention to the acoustic and visual issues for any presentation space that will be connected via conference to another. Minor, seemingly insignificant anomalies we often ignore in the local environment become significant impediments to smooth communication with people at the far-end of any connection. In short, we must always ask ourselves, "What does this look like and sound like to the people at the far-end?"

In order to guarantee that the final conference environment will have a solid foundation, we begin with the construction of the walls, floors and ceilings for videoconference spaces.

Walls

Conference room walls should be built from slab to slab. That is, there should be no gaps from the concrete of one floor to the concrete of the next floor. Resilient, gypsum board mountings should be used to close any gaps. The thickness of the gypsum board should be 5/8" or more (one layer of 5/8" and one layer of 1/2" bonded together would be ideal) on the inside of the room, with 1/2" thick (or as required by local building codes) appropriate for the outside of the walls. There should always be a difference in thickness between the materials used on the inner versus the outer walls. That difference in thickness subdues mechanical coupling (vibration) between the two layers. A good overall wall thickness is 6". It is recommended that "offset stud" construction be used, typically a 6" header and footer with 3.5" verticals attached in an alternating pattern one toward the outside of the footer, the next toward the inside and so on.

Fiberglass dense batting or mineral rock wool, 4" to 6" thick (the equivalent of R-11 to R-13) should be placed in the wall space. The thickness of the batting is not critical. The critical aspect is that it must be loosely placed in the wall space, not compacted to fit. The resultant wall will have excellent acoustic isolation from the outside world. More significant acoustic isolation can be achieved by placing an additional barrier layer within the wall space. Typically this barrier will be made of a dense polymer material, about 1/8" thick, and the improvement regarding loss of sound transmitted through the wall will be roughly a factor of 10. These materials are available from a variety of manufacturers.

Windows

Windows usually present the equivalent of an acoustic nightmare (as well as altering the way a camera renders colors and brightness). They not only transmit room sound, but also allow unwanted outside noise to intrude on the conference space. In the event that windows cannot be avoided, it becomes essential that window treatment of some sort be used. This treatment should match the interior look and feel of the space, while providing a high level of sound and light block. Typically a heavyweight drape (24 ounces or more) of heavy fullness (not less than 6" fullness on not less than 8" centers per fold) is preferred. In all cases, the use of sheer draperies or standard vertical or horizontal blinds should be avoided, due to their inherent inefficiency in blocking sound and light, and the fine lines they create within the camera field of view.

Ceiling Tiles

These should be high-quality acoustic tiles, ideally 1"- thick compressed densecore fiberglass. An added benefit of this kind of ceiling tile is that it works well with the indirect lighting as specified elsewhere in this section. To reduce any extraneous noise from leaving or entering the room via the ceiling space, the ceiling tiles can be blanketed completely from the plenum side, with a minimum of 6"- thick unfaced dense fiberglass batting or mineral rock wool, (the equivalent of R-15 to R-19). Here again, a barrier layer will improve the performance, but all local building codes must be followed for allowable materials in the various aspects of room acoustic modifications. To make entry and exit from the ceiling space easier, the blanket and barrier do not need to rest on the ceiling tiles, but may be suspended above it.

Air Conditioning

It is critical that all air-handling equipment (blowers, heat exchangers, solenoid valves, etc.) be located outside the physical meeting room space. This will prevent the noise burden associated with such equipment from affecting the participants of any meetings held in the room. Location of air-handling equipment within the ceiling space of a conference room often renders that room unusable for video or audio-only conferencing.

The air vents should be of open construction to eliminate "wind noise" while the system is running. These vents normally are specified as "low-velocity" diffusers. The number of air vents within the room should be sufficient to maintain a consistent temperature throughout the space. All HVAC ducts and diffusers should be oversized for the general application in the space, with minimum 2' diameter insulated flexible ducts and matching 2' noise dampening diffusers generally best. All ducts should be installed with gradual bends and curves rather than rigid 90-degree corners. This will minimize "thunder" sounds as the initial air pushes through the ductwork and into the room.

There should be a thermostat to control this specific room system independently of the rest of the building, and that control should be located within the room.

Important: Allow an additional 5,000 BTU of cooling capacity for a standard "roll-about" singlemonitor VC system with extended in-room peripherals (PC, document camera, scan converter, etc.) and a minimum of 10,000 BTU for a dual display multimedia presentation system with large screen displays. For the comfort of the participants, the room must accommodate these heat loads, plus the heat load of a room full of people, with minimal temperature rise.

Interior Design and Finishes

Wall colors within the field of view of the camera have a significant impact on the far-end perception of the room video quality. Certain colors are better suited to video rooms than others. The electronics and software of the videoconferencing system “builds” the images at the far-end from a gray/blue reference image. When there is a minimal difference between the room background and the reference image color, the codec has an easier time turning the image into numbers, with the result that the far-end will see a much higher quality video presentation. In general, light gray with just a touch of blue seems to work best. For rooms that have marginal lighting, slightly darker colors are quite useful.

In keeping with these color recommendations, the acoustic panels (discussed elsewhere in this section) should be ordered in light colors such as silver-gray, quartz or champagne for panels within the camera field of view. For aesthetics, however, panels may be alternated in color along the wall.

Furniture

As we have noted, VC rooms should be slightly on the large side for the typical number of attendees. The placement of furniture should present a natural rapport with the videoconference system, but shouldn't preclude the local interaction of conference participants. Doorways used for access to the space usually should be within the view of one of the camera presets to prevent the perception from the far-end that people could come into their meeting unseen. Doorways should not, however, be in constant, direct view of the camera system, as this may cause unwanted distractions and movement of people in the picture field.

Any tables within the conference environment should have a light top surface. Glossy tops should be avoided, as should strong colors or any bold wood grain. If glossy or saturated color surfaces are unavoidable, then proper lighting can help reduce (but not necessarily eliminate) their ill effects. The best table surface color is a flat satin finish, in neutral gray. In cases where the worst possible surfaces are present, the proper surface color effect can be achieved by using a table covering, put in place only when the room is being used for videoconferencing. This will, however, create problems related to the use of access ports in the tables or movement of end-user items across the surface.

Acoustics

Additional general elements related to the interior finish details for the space include acoustics. In terms of ambient noise level, the acoustic design goal for any conference- enabled room is at least NC-30 (NoiseCriteria-30). This level of specification dictates a very quiet space (somewhere around 40-dBCSPL

ambient noise level). A room built to the description found elsewhere in this section will usually fall between NC-30 and NC-35. The actual NC value is not critical; what is important is that the room be built with the intent and care required to achieve the low noise rating. Typically in architectural design, a site evaluation and analysis are required to certify the noise performance of a given space. The quieter the room, the easier it is to hear others in the same room as well as be heard by others who are participating via conference connection to a far-end location (or locations).

Almost every conference room of medium to large size (larger than 12'x15') requires some level of acoustic treatment to provide good speech-rendering to other conference sites. The quality differences lie in the areas of intelligibility and consistency of loudness as presented to the far-end. While the people at the far-end may hear the sounds coming to them, it may be hard for them clearly to distinguish all of the vowels, consonants, inflections and nuances of actual human speech communication. (We all know that it is not simply what you say but how you say it—i.e., the inflections and intonations—that makes the difference in perceived meaning in human communications.)

Good audio practice dictates that the treated surfaces be composed of at least two nonparallel walls. And, as the VCS hardware is a potential source of distracting fan noises, the walls to be treated should include the wall immediately behind the VCS hardware, whenever this hardware is within the conference room proper. To help prevent meeting audio from leaking into adjoining hallways or offices, the walls along those areas also should be treated.

Approximately 50 percent of the wall area needs be covered with acoustic panels. The type recommended is 1" thick compressed, dense-core fiberglass, fabric-covered, or equivalent, with a SABIN (sound absorption index) value of 0.9 average. This specification is sometimes referred to as NRC (noise reduction coefficient). If reduction of sound passing through is required, then an additional barrier layer is laminated to the dense-core material, usually 3/8" thick fiber compression board. The barrier layer is placed against the existing wall material, then the acoustic absorption panels are placed on the interior-room side of that. The barrier panels will have a SABIN of 0.9, but will have an additional specification of an STC (sound transmission coefficient) of 20. STC is a measure of the amount of reduction in loudness of sound passing through the material. Having an STC rating of 20 means there is a factor of 10 reduction in the amount of sound passing through that material. A high-quality conference room wall usually has an STC of 60 or more—that is, less than 1/1,000 of the sound in the room leaks through the wall.

Room Lighting

The brightness of the lighting in a videoconference room plays an important role in determining the far-end view of the meeting. When there are low to moderate amounts of light—20fc to 35fc (footcandles), typical office lighting—the distance range of “in focus” objects (depth-of-field) usually is

only 2' or 3' from nearest in-focus to furthest in-focus. With bright light (70fc or more) the range of in-focus objects can more than double. Participants at the far-end will see more people in sharp focus, and the codec will have an easier time encoding the image.

Bright standard direct fluorescent lighting has the undesirable side effect of being harsh for the local participants. In addition, the direct down lighting casts significant "drop shadows." The result is undue stress among participants.

The best plan for videoconferencing is to use indirect lighting for 80 to 85 percent of the light, and evenly distributed direct lighting for the remaining 15 to 20 percent. The indirect light will help minimize shadows on the faces of the participants, and make the room more comfortable for viewing the far-end on the TV monitor. The direct light can be used to create backlight separation between foreground and background objects or surfaces.

There should be not less than 55fc and ideally as much as 75fc of light (770lux) on the faces of the participants in the facial field as viewed by the camera in the conference space. The light should be completely even across the field of measure or view, and of one consistent color temperature.

To best meet these requirements, indirect fluorescent lighting most often is recommended. This type of lighting works by using the upper walls and ceiling as diffuse reflectors for the light. The usual recommended color temperature for these is 3,000 to 3,800 degrees Kelvin. If there is a significant quantity of outdoor light entering the room, the lamps should be more than 5,500 degrees Kelvin.

Light Fixtures

The light fixtures generally recommended for indirect lighting are available from a number of manufacturers. They typically are three-tube, 8" oval indirect up-lights, though they may take the form of chandelier-style pendant lights, wall sconces, cove lights or flushmounted specialized troughs. Many manufacturers work closely with contractors and lighting designers to ensure that the correct light levels and shadow-free zones are designed into the room, especially when used for videoconferencing. Lamps for these fixtures are available in a variety of specified color temperatures from numerous manufacturers, including Sylvania, General Electric and Osram/Phillips. Indirect fixtures are available in a number of different designs or "looks," and can be purchased in configurations that will complement and not detract from the interior design of the space.

Lighting layout recommendations and determination of the number of fixtures needed are handled either by the architectural design firm or by submitting a complete floor plan, including reflected ceiling, walls and furniture placement, to fixture vendors. The vendors will analyze the plans and return a finished lighting layout to the customer, detailing the number of fixtures, placement and required wiring.

It is important to remember that the use of traditional meeting room downcans—even those that have color-corrected light sources—for any lighting in the field of view that may include human faces is to be avoided at all costs. These will result in extremely uneven fields of light, or pools, and heavy, unnatural shadows on the faces of the participants.

Room Preparation Conclusion

When we follow the above guidelines we dramatically improve the odds for success in the final deployment of live bi-directional conference-based human communications. An added benefit is that this approach dramatically enhances the effectiveness of the room as it operates for more traditional meetings and presentations. The environment is more comfortable and flexible, and less dependent on specialized electronics for “fixing” deficiencies in the environment.

Audio Elements

Once the space is prepared, we can focus on integration of the various audiovisual tools within the environment: audio, video and control.

Audio Input

The primary input device for the audio portion of any conference system is the microphone. Elsewhere in this book [*Basics of Audio and Visual Systems Design*] we have discussed how these devices operate within a given acoustic environment. We turn now to a short discussion of how these elements operate within a conference environment, where such factors as “three-to-one” rules and “critical distance” often are pushed to the limit or violated entirely.

When sound travels in a room, it follows “the inverse square law.” This means that the sound level heard at a microphone drops by a factor of four every time the distance doubles. Another important consideration in room audio design is the concept of “critical distance,” or the distance at which the loudness of the room background noise plus reverberation is less than one tenth of the loudness of voices getting to a particular microphone. (This definition is the result of research conducted by Don and Carolyn Davis, that is referenced in the chapter “Designing for Intelligibility” in the *Handbook for Sound Engineers*.¹⁾

1. Davis, Don and Carolyn. “Designing for Intelligibility” in *Handbook for Sound Engineers: The New Audio Encyclopedia*, ed. Glen Ballou (Indianapolis: Howard Sams & Co., 1991), 1279-1297.

As an example, we will work with a room having an ambient noise level of approximately 60dBA-SPL. A person speaking in a normal voice is 72dBA-SPL at about 2' distance. At 4' the loudness drops to approximately 66dBA-SPL. This already is farther than the critical distance criteria allow, given the ambient noise level. At 8' distance, a normal speaking voice is approximately 60dBA-SPL. Now the voice energy and the room background noise are about equal. For "send" audio systems in a room to work correctly, therefore, the room noise level would have to be below 40-45dBA-SPL at the microphones at all times. This gives us some measure by which we can begin to plan the microphone array within a space, including selection based on pickup pattern, sensitivity, noise rejection and signal-to-noise in relation to the ambient noise floor or level within the space. The good news is that a room designed and built as described in this section will provide an acoustic space where almost any properly configured and installed audio system can operate with very good results.

Perhaps the most difficult issue for any room designer or system planner is actual microphone placement within the space. Given the fact that many people view conference table space as sacred (to be used for papers, laptops, coffee cups and other end-user items), there often is a great deal of pressure to place the local microphones on the ceiling instead of on the table surface. But this approach must be taken with great caution. We have already seen the dramatic impact of changes in the distance between people (their mouths) and the microphone. Ceiling systems generally place microphones farther away from the participants' mouths, not closer; critical distance calculations may eliminate ceiling placement from consideration for this reason alone. In addition, the ceiling surface generally is one of the noisiest areas of the room. Proximity to HVAC ducts and vents, attachment of tiles and runners to building members that are prone to vibration and shaking, and proximity to noise from other spaces migrating through the plenum make this area one of the least desirable for placement of microphones. This doesn't, however, keep people from looking at this broad open surface as the best place for microphones, to "get them off the table."

If ceiling placement is chosen, the system planner must select the components with great care from a manufacturer that specializes in this type of audio voice reinforcement. The manufacturer must be skilled in live audio and capable of installing the components (that is, being both able and willing to locate microphones at precisely measured distances from speakers, and locating those speakers at precisely measured intervals from each other and from the walls) to extremely tight tolerances. The system provider must fully inform the endusers of the potential downside effects of this approach. In any event, simply mounting a standard tabletop microphone on the ceiling tiles or implementing this solution in an ambient noise environment of 45dBA-SPL or greater will all but guarantee costly failure. No amount of post-microphone processing will fix the problems.

Audio Output

For conference communication we do not really care about producing the thundering roar of jet aircraft engines, or other sounds reproduced on TV or in the movies. We are interested in reproducing the human voice. The tone, intonation, pitch and level of people speaking from the far-end should sound as much as possible like the sound they would make if they were speaking in the room. Given what has been covered in other sections of this book [*Basics of Audio and Visual Systems Design*], we will touch base here on a couple of simple, basic elements of the speaker technology we deploy in the conference room. These basics fall into three subcategories: direction, power and range/frequency response.

Direction

As human beings, we feel most comfortable when the voice we hear appears to come from the same direction as the image of the person speaking. This means that reliance on ceiling speakers alone is not an ideal practice when the system is used for videoconferencing. In many small and medium-sized systems, front-firing speakers alone can provide proper direction and adequate coverage. Larger rooms (greater than 12'x15') probably need both front-firing and side or top-fill speakers in order to maintain proper coverage at nominal power levels.

In planning systems for larger rooms, we need to take advantage of the HAAS effect. Basically stated, this is the human brain's interpretation of sound direction when the same sound arrives at the ear from two or more directions within a certain time period. We attribute the direction of the sound to the direction from which the sound is first perceived, even if it is mixed with that same sound arriving from a completely different direction, as long as the two (or more) instances of the sound are within about 30ms of one another. Since sound travels faster electronically than it travels through the open air we may need to add audio delay to the side firing or ceiling speaker arrays in order to keep the primary perceived point source as the front of room/front-firing speakers.

Power

Power is a function of loudspeaker efficiency and total available system power. Most speakers operate in a power range that is broader than the range in which they operate without distortion. For the purpose of conference communication, we are interested in sound that has little or no distortion. Sound that is reproduced accurately (with no distortion) will most accurately represent the voice of the people from the far-end (our primary goal). Accurate reproduction also will aid the echo-cancellation circuitry in the system, minimizing the amount of echo that the system sends back to the people at the far-end, and thereby increasing perceived ease of intelligibility and understanding. Remember that any distortions present in the playback audio system—whether harmonic, amplitude (gain compression) or temporal (time

delays)—will be recognized by the echo canceller as “new audio information,” and it will send those distortions to the far-end, perhaps wreaking havoc on the system audio quality. In short, speaker power should be matched to overall audio subsystem power. The speakers should provide adequate coverage and be able to present approximately 80 to 85dBA-SPL (continuous) at the local site with the system operating at nominal power utilization, and have a peak reserve of 15 to 20dB before distortion.

Range/Frequency Response

The human ear is able to hear sounds in a very wide range of frequencies (as low as 70Hz and as high as 12,000Hz). The human voice is able to produce sounds in a narrower range (100Hz to 8,000Hz). Most spoken communication occurs, however, in a range that is only 150Hz to about 6,000Hz. This means that we need to select speakers that operate with ideal performance in a fairly narrow range for human voice (as opposed to speakers used for music, that may have ranges of 20Hz to 20,000Hz). We must also be alert to the crossover characteristics of the speakers we select. Many coaxial and paraxial speakers have their crossover within the middle audio frequencies, thereby inducing potential distortion within the spoken frequency range and creating anomalies within the system that hinder voice communication.

Video Elements

As a general rule, any display used in a videoconferencing environment should be sized for the number of attendees, the physical distances involved and the type of material presented onscreen. The screen size should allow for clear and easy viewing at the various distances experienced within the room. A measure of required screen size that often is applied to projection technology is: no closer than 1.5 times the diagonal measure and no farther than 7 times that measure. Nobody should have to sit closer than 2 times the screen diagonal measure, nor farther than 8 times that measure.

Direct viewed tube-type displays (monitors) almost always are sharpest and brightest in a videoconferencing environment. “Retro-projector cabinet” displays (which look like largescreen TVs) are next in sharpness and brightness, and “front-screen” projectors come in last. Glare and uncontrolled ambient room lighting adversely affect the quality of the image most with front-screen projectors and least with direct view tubes. A very limited number of frontscreen projection systems have sufficient brightness and contrast to be useful in a properly lit videoconference room.

Video Projection for Use in Videoconference

Many installations make use of video projection devices. The most important thing to remember in the planning of video projection for a videoconference space is that front projection is vastly inferior to rear projection. Front projection systems are less expensive and easier to implement, but the conflicting interest between the camera and the projection display makes this form of display a very poor choice. Front projection setups operate best when the lighting in the room is dimmed or doused. When this is done, the videoconference cameras can no longer operate, since they require even, bright, color-corrected light. A direct conflict between these two technologies is clear. In the event that a rear projection room cannot be set aside, retro-projection units can be purchased from a number of manufacturers. These units normally are available in sizes ranging from 40" to 72" diagonal measure. To display high-quality video while maintaining optimum lighting for interactive video meetings will require a projector of the "light-valve" or DLP™ class.

Regardless of the exact type of projector selected and the exact nature of "front versus rear," there are certain essential rules for projector placement. The goal in projection is to get the image beam to aim directly into the audience's eyes. In Western cultures the average distance from the floor to a seated person's eye is 4'. That distance becomes the target for the direct beam of the projector. Again keep in mind that front projection should be avoided except in the most extreme cases. If it is employed at all it must be used with an extremely bright projector (2,500 lumens or greater for any space smaller than 25'x40').

Cameras

There usually is a "main" or "local people" camera positioned on top center of the display, so that it can "see" the participants and anything necessary at the sides of the room, using pan and tilt features. If individual presentations may be made from the side or "front of audience" area of the room, an additional camera should be located at the back of the room, also mounted to allow a view of the presenters when necessary. Some cameras contain an active camera pointing system that also can be used effectively, given proper care in the mounting of the camera assembly. The area immediately surrounding the camera assembly needs to be acoustically "dead" to ensure that the voice tracking and pointing algorithms work correctly. This is another reason to pay close attention to the acoustic environment and acoustic treatment of any space intended for use with this type of camera system.

If local presentation is blended with VC for any events, we must consider the needs of the presenter who will not be "facing" the local image or inbound image displays used by the main body of the local audience. One or two monitors (and a camera) should be mounted at the back of the "audience-end" of the room, with the horizontal centerline at approximately 5' from the floor for ease of presentation interaction between the presenter and the group(s) at the farend(s). Remember that, with the exception of PC-based information that is not in a standard composite narrowband video format, any information we

wish to “show” or “view” must be translated to video, most often with some sort of camera mechanism. Document cameras, 35mm slide-to-video units, video scanners and scan conversion devices all are designed to take one format of source material and convert it to a standard video signal that can be digitized, shipped to the far-end(s), and converted back to composite video for display. Which devices are selected and how they are used depends entirely on the needs and goals of the end-users of the system(s) and the format of their source materials.

Room Control Elements

To give all participants the easiest use of the room for any and all presentation or conference purposes, a fully integrated room controller is recommended. It is important that one controller operate all devices in the room so that only one user interface needs to be learned by those managing the facility. The common controller also makes it much easier to expand and enhance room capabilities over time by adding or upgrading equipment. A proper room controller can operate and coordinate the use of lighting, curtains, displays, audio devices, VCRs and slide projectors, as well as all the conferencing equipment, including any network-related control needed. In lieu of a complete control system, a limited functionality controller can be located at the presentation interface panel to control the switching and routing of the computer graphics and configure the overhead camera video paths.

It is strongly advised that at least 20 percent of the time spent developing a videoconferencing room be devoted to this important sub-system, as it will complete the integration of the conference and presentation environment.

And remember that simpler is always better. People do not pay for technology. They pay for the benefits that technology can bring. The doorway to those benefits is a simple, straightforward and intuitive user control.

Status Messages

Status Display

The call status can be displayed in a number of ways. The [getcallstate](#) command on page [4-158](#) returns a table listing the status, speed, and dialed number of current calls.

To display real-time status on individual B channels (incoming or outgoing calls), either register the API session with the [callstate](#) command on page [4-62](#), or start an outbound call with the [dial](#) command on page [4-95](#). These two commands will cause the system to re-direct the B channel status messages to the session which has issued one of these two commands. For example, if the RS-232 device issues a `di al` command, then call status is directed to the RS-232 port; if a later session on a Telnet port issues a `di al` command, then call status is also directed to that Telnet port.

B Channel Status Message Example

The following output example is for B channel status messages, where:

| | |
|-----------|---|
| cs | Indicates call status for one B channel. |
| RINGING | Indicates a ring-in or ring-out and is equivalent to a 25% blue sphere on the graphical user interface. |
| CONNECTED | Is equivalent to a 50% yellow sphere. |
| BONDING | Indicates the bonding protocol is operational on the channel and is equivalent to a 75% orange sphere. |
| COMPLETE | Is equivalent to a 100% green sphere. |

Polycom HDX 9000 Series Specifications

Back Panel Information

Refer to the Administrator's Guide for Polycom HDX Systems at www.polycom.com/videodocumentation for back panel views of Polycom HDX systems and for details about the various connections available on each Polycom HDX back panel connector.

Inputs/Outputs

Audio Specifications

| Characteristic | Value |
|---|--|
| Maximum Input Level
0 dBFS for Audio Input 4 | +12 dBV (4.0 V _{RMS}), ±1 dB |
| Maximum Input Level
0 dBFS for Audio Input 3 (VCR/DVD) | +12 dBV (4.0 V _{RMS}), ±1 dB |
| Maximum Input Level
0 dBFS for Audio Input 1 (External Input, Line Level) | +12 dBV (4.0 V _{RMS}), ±1 dB |
| Maximum Input Level
0 dBFS for Audio Input 1 (External Input, MIC Level)
Not supported on Polycom HDX 9006 systems. | -20 dBV, ±1 dB |
| Input Impedance
Audio Input 4 Differential | 20 k, ±5% Ohms |

| Characteristic | Value |
|---|---|
| Input Impedance
Audio Input 3 (VCR/DVD) Differential | 20 k, $\pm 5\%$ Ohms |
| Input Common-Mode Rejection Ratio
Balanced Inputs, Common-Mode Amplitude ≥ 1 dBFS | >60 dB, 20 Hz to 22 kHz |
| Maximum Output Level
Balanced Outputs (≥ 10 k Load) | +12 dBV (4.0 V _{RMS}), ± 1 dB |
| Output Impedance
Balanced Outputs | 150, $\pm 5\%$ Ohms |
| Signal-to-Noise Ratio | >90 dB, A-weighted |
| Dynamic Range | >90 dB |
| Crosstalk and Feed-Through | ≤ 90 dB, 20 Hz to 22 kHz |
| Frequency Response
Balanced Inputs, Relative to 997 Hz | +0.5, -3 dB, 20 Hz to 50 Hz
± 1 dB, 50 Hz to 20 kHz
+0.5, -3 dB, 20 kHz to 22 kHz |
| Total Harmonic Distortion + Noise vs. Frequency
-1 dBFS Input Level
-20 dBFS Input Level | -80 dB, 20 Hz to 22 kHz
-70 dB, 20 Hz to 22 kHz |
| Phantom Power
DC Voltage Level, Relative to Shield Termination
DC Operating Current
Fault Current
Source Impedance
Phantom Power is not supported on Polycom HDX 9006 systems. | +48 V _{DC} ± 4 V
10 mA
16 mA
6.8 k, $\pm 1\%$ |

DTMF Dialing

The Polycom HDX 9000 series systems generate the following tip/ring signal levels:

- Low-frequency tone: -10.2 dBV, -8.0 dBm when AC termination of the line is 600 Ohms
- High-frequency tone: -8.2 dBV, -6.0 dBm when AC termination of the line is 600 Ohms

- The system seizes the line and waits 1.5 seconds. The number is then dialed with a 80 ms tone period followed by a 80 ms silence period for each digit.

Remote Control

This section provides information about the IR signals for Polycom HDX systems.

This information is provided for reference only. Polycom claims no responsibility or liability for programmed third-party remote control devices.

Notes

- Wake up – 2.6 ms on; 2.6 ms off
- 0–559 µs (22 pulses at 38 KHz) on; 845 µs (33 pulses at 38 KHz) off
- 1–845 µs (33 pulses at 38 KHz) on; 1192 µs (46 pulses at 38 KHz) off
- EOM–559 µs (22 pulses at 38 KHz) on
- System Code consists of a User ID field (upper nibble) and the Polycom Vendor Code (lower nibble) with value 0x5. The default User ID value is 0x3, so the default System Code value is 00110101 or 0x35.
- Parity is a 2-bit field consisting of a parity bit (b1) and a toggle bit (b0). Parity is even.
- Inter-burst timing is 2200 pulse times at 38.062 KHz or 57.8 ms
- 38.062 KHz signal is at 1/3 duty cycle to LED
- Multi-bit fields are transmitted most significant bit first
- Bits are labeled b0..bn, where b0 is the least significant bit

Protocol is: <Wake up> + <System Code> + <Key Code> + <Parity> + <EOM>

| Key Name | Key Code | Key Code | Parity |
|----------|----------|----------|--------|
| # | 1100 | 0CH | Even |

RS-232 Serial Interface

The RS-232 serial port is implemented by an FPGA-based UART (Universal Asynchronous Receiver/Transmitter) that supports the following values.

| Mode | Baud Rate | Parity | Stop Bits | Data Bits | Flow Control |
|-------------------------|--|--|------------------|------------------|---------------------|
| Control | 9600 (default), 14400, 19200, 38400, 57600, 115200 | None | 1 | 8 | Off |
| Camera PTZ | 9600 (default), 14400, 19200, 38400, 57600, 115200 | None (Sony), Even (Polycom EagleEye HD camera) | 1 | 8 | Off |
| Closed Caption | 9600 (default), 14400, 19200, 38400, 57600, 115200 | None | 1 | 8 | Off |
| Vortex Mixer | 9600 (default), 14400, 19200, 38400, 57600, 115200 | None | 1 | 8 | Off (default), On |
| Pass Thru | 9600 (default), 14400, 19200, 38400, 57600, 115200 | None (default), Even, Odd | 1 (default), 2 | 8 | Off (default), On |
| Polycom Annotation | 9600 | None | 1 | 8 | Off |
| Interactive Touch Board | 9600 | None | 1 | 8 | Off |

Secure RS-232 Interface API Permissions

You must log in with a password in order to start an RS-232 session if the system is configured with the Maximum Security Profile.

API Permissions Table

You can log in with either the Admin ID and Admin Remote Password or the User ID and User Remote Password of the Polycom HDX system. The available API commands depend on which type of ID you use to start the session, as shown in the following table.

| API Command | Parameter | User ID | Admin ID |
|---------------|-----------------------------------|---------|----------|
| ! | “string” | 3 | 3 |
| | 1...64 | 3 | 3 |

Categorical List of API Commands

You can view the table of contents for this book to see an alphabetical list of available API commands. These commands are categorized into the following sections:

- [Local Directory Commands](#) on page E-2
- [Call Function Commands](#) on page E-2
- [Conference Setting Commands](#) on page E-3
- [Chair Control Commands](#) on page E-4
- [Global Services Commands](#) on page E-4
- [LAN, WAN, and IP Commands](#) on page E-5
- [H320, POTS and Miscellaneous Network Commands](#) on page E-7
- [Video and Audio Commands](#) on page E-9
- [Registration Commands](#) on page E-11
- [System Commands](#) on page E-11
- [User Interface and System Display/Sound Commands](#) on page E-12
- [Miscellaneous Commands](#) on page E-13

Local Directory Commands

- [abk \(deprecated\)](#) on page [4-9](#) (all Polycom HDX system versions)
- [addrbook](#) on page [4-12](#) (Polycom HDX system versions 2.5 and later)

Call Function Commands

Calling Commands

- [answer](#) on page [4-28](#)
- [dial](#) on page [4-95](#)
- [flash](#) on page [4-135](#)
- [gendial](#) on page [4-154](#)
- [gendialtonepots \(deprecated\)](#) on page [4-155](#)
- [hangup](#) on page [4-176](#)
- [phone](#) on page [4-265](#)

Call Status Request

- [advnetstats](#) on page [4-15](#)
- [callinfo](#) on page [4-61](#)
- [getcallstate](#) on page [4-158](#)
